

Customer Profile Specification 2012B

Version 2.0

19 October 2012

About HTNG

Hotel Technology Next Generation (HTNG) is a non-profit association with a mission to foster, through collaboration and partnership, the development of next-generation systems and solutions that will enable hoteliers and their technology vendors to do business globally in the 21st century; to be recognized as a leading voice of the global hotel community, articulating the technology requirements of hotel companies of all sizes to the vendor community; and to facilitate the development of technology models for hospitality that will foster innovation, improve the guest experience, increase the effectiveness and efficiency of hotels, and create a healthy ecosystem of technology suppliers.

1 This Specification at a Glance

This specification details a set of core services and a schema for customer profiles with the goals of:

- Enabling a richer and more structured customer profile
- Providing web services to facilitate customer profile interactions across an architecture

This Customer Profile Specification includes:

- Globalization (Language, Addresses)
- Social Media
- Preferences (enabling structured preferences rather than 'notes and comments')
- Querying only components of a profile (ie; related travelers, loyalty, address)
- Association of Vouchers to a customer profile
- Enrolling a customer (profile) into a Loyalty Program
- Tracking marketing offers and promotions affiliated to a customer (profile)

This specification is designed to be implemented in any system that creates, updates or otherwise interacts with customer profiles.

2 Document Information

2.1 Document History

Version	Date	Author	Comments
1.0	11 May 2012	Customer Profile (CP) Workgroup	First iteration – 2012A Release
1.01	19 Jun 2012	Mark Jarman, Judy Simons	Began second iteration spec – completed use cases
1.02	21 Jun 2012	Jay Rosamilia	Seeded Message Flows, Sample Messages, and Data Element Tables. Also drafted paragraph on Publish/Subscribe.
1.03	22 Jun 2012	Micah Friedman	Added use cases
1.04	6 Jul 2012	CP Workgroup	Finalized use cases
1.05	13 Jul 2012	CP Workgroup	Minor Updates to Voucher Use Case
1.06	16 Jul 2012	CP Workgroup	Cleaned-up Classifications sample message
1.07	18 Jul 2012	Kylene Reese	Incorporated 1.0 spec
1.08	20 Jul 2012	Jay Rosamilia	Added new fields to data element tables.
1.09	23 Jul 2012	CP Workgroup	Added new fields to data element tables.
1.10	27 Jul 2012	Jay Rosamilia	Added sample messages for Classifications and Read Profile Vouchers
1.11	27 Jul 2012	HTNG Staff, Micah Friedman	Updated roles, Drafted sections 1 & 2
1.12	03 Aug 2012	Jay Rosamilia	Added sample messages for Create and Update profile vouchers
1.13	10 Aug 2012	Mark Jarman, Judy Simons	Created sample messages for Enroll Loyalty Member and Manage Marketing Promotions
1.15	24 Aug 2012	Jay Rosamilia	Reworked sample message for manage marketing promotions.
1.90	21 Sep 2012	Kylene Reese	Prepared for HTNG Member Review
1.95	12 Oct 2012	Kylene Reese	Prepared for Workgroup vote
2.0	19 Oct 2012	CP Workgroup	2012B Release

2.2 Document Purpose

This specification details a set of core services and a schema for customer profiles with the goals of enabling a richer and more structured customer profile and provides web services to facilitate customer profile interactions across an architecture. This document provides a framework for trade partners to define various attributes of the customer profile specific to their domain, especially when codes and values are referenced.

2.3 Scope

This specification is designed to provide a set of core services to be implemented within any system which creates, updates or otherwise interacts with customer profiles.

2.4 Relationship to Other Standards

This Customer Profile specification is based on and builds upon the latest version of the OpenTravel schema (OpenTravel 2012A as of the writing of this specification).

This specification also *requires* the use of the latest version of the [HTNG Web Services Framework](#) (2008B at the time of this spec's release).

While this specification does allow the sending of payment card information, the expectation is that the [HTNG Payment Systems & Data Security Data Proxy Specification](#) will be leveraged in order to limit the PA-DSS requirements.

HTNG has created a mechanism for systems to be able to register their interest in receiving event notifications from other systems. The [HTNG Event Notification Specification](#) describes the following interactions:

- Obtaining a listing of events for which a subscription can be established.
- Registering (and unregistering) interest in receiving event notifications.
- Event-driven payload delivery.

2.5 Audience

The specification is designed for software vendors, integrators and hoteliers.

2.6 Overview

Section 3 – Component Scenarios

This section includes the scenario overviews, diagrams, roles, use cases, data element tables, and sample messages regarding each of the scenarios. The technical artifacts (XSDs and WSDLs) for the certification release of this specification can be found in a separate ZIP file included with specification.

Section 4 – Messages

This section includes data element tables for request and response.

Section 5 – Appendices

This section includes terms, implementation requirements, links, any referenced documents, as well as common HTNG schema components referenced in this document.

2.7 Known Limitations

Loyalty functionality that is not in scope for this set of use cases or for this specification:

- Loyalty rewards accrual
- Loyalty rewards processing
 - What is valid towards accrual
 - Crediting of awards to an account
 - Maintenance of accounts

The shaded rows in the Data Element Tables in [Section Four](#) below are not currently in the OpenTravel Alliance customer profile specification. It is the intention of the HTNG Customer Profile Workgroup to collaborate with the OpenTravel Alliance in order to get these changes accepted into a future specification. Please note that these areas are subject to change and revision in the OpenTravel Alliance specification as well as a future version of a HTNG Customer Profile Workgroup specification (in the case that OpenTravel Alliance had further comments/concerns). Please coordinate with HTNG (by emailing workgroups@htng.org) or the Customer Profile Workgroup for more information or with specific concerns.

3 Component Scenarios

This specification assumes that there is an authentication mechanism or credential-checking process in place.

3.1 Search Profile

3.1.1 Overview

This use case describes the business and system processes and requirements for the search for Customer profiles functionality.

3.1.2 Roles

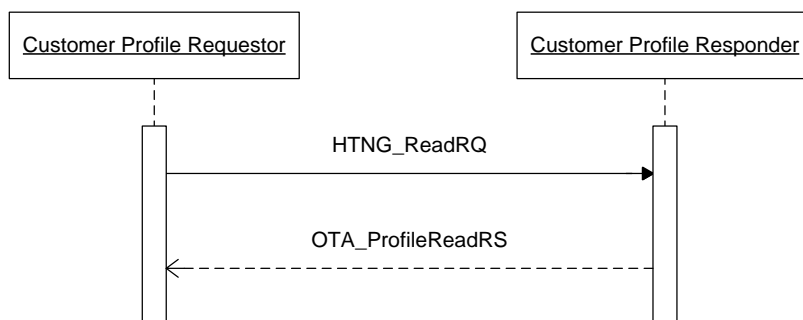

Role	Description	Example
Customer Profile Responder	A system that manages customer profiles.	Customer Loyalty Management application
Customer Profile Requester	A system that needs to be able to retrieve the latest version of a customer profile.	Hotel Property Management System (PMS) Hotel Reservation System (CRS)

3.1.3 Use Case

Assumptions:	<ul style="list-style-type: none">• One or more systems have been identified as being a point-of-inquiry (Customer Profile Responder) for customer profiles.• Customer Profile Requester is assigned to the appropriate role/group that has access to the search for customer profiles functionality.• An appropriate set of agreed upon query parameters have been agreed upon by trading partners.
Pre-conditions:	None
Trigger:	None

Basic Course of Events:	<ol style="list-style-type: none"> 1. Customer Profile Requester performs a look up of customer profiles using parameters in a query and receives a list of customer profiles matching the condition(s) from the Customer Profile Responder. 2. The Customer Profile Responder provides sufficient information, including the unique customer profile identifier, about the customer in the search results to assist with identification of the customer, or provide a message indicating no matches were found. 3. The Customer Profile Responder provides zero-to-many matching results based on the search criteria submitted by the Customer Profile Requester.
Post-conditions:	None
Exception Path:	None
Alternative Paths:	None

3.1.4 Message Flows

3.1.5 Sample Request

3.2 Read Profile

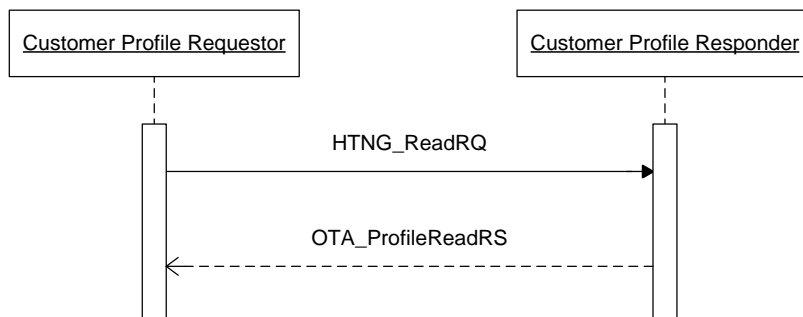

3.2.1 Overview

This use case describes the business and system processes and requirements for obtaining detailed information on a particular customer profile.

3.2.2 Roles

Role	Description	Example
Customer Profile Responder	A system that manages customer profiles.	Customer Loyalty Management application
Customer Profile Requester	A system that needs to be able to retrieve the latest version of a customer profile.	Hotel Property Management System (PMS) Hotel Reservation System (CRS)

3.2.3 Message Flows

3.2.4 Use Cases

Assumptions:	<ul style="list-style-type: none"> One or more systems have been identified as being a provider (Customer Profile Responder) of customer profiles. Customer Profile Requester is assigned to the appropriate role/group that has access to the reading of customer profiles functionality. An appropriate set of readable attributes have been agreed upon by trading partners. One or more systems have been identified as being a point-of-inquiry (Customer Profile Responder) for customer profiles.
Pre-conditions:	<ul style="list-style-type: none"> A unique customer profile identifier exists, enabling a one-to-one match, and is known by the Customer Profile Requester, which may have been the result of a search profile activity.
Trigger:	<ul style="list-style-type: none"> Customer Profile Requestor has the need to read profiles.

Basic Course of Events:	<ol style="list-style-type: none"> 1. Custom Profile Requestor initiates call. 2. Customer Profile Responder retrieves profiles matching query parameters. 3. The Customer Profile Responder provides zero-to-many matching results or an exception code based on the search criteria submitted by the Customer Profile Requester.
Post-conditions:	None
Exception Path:	None
Alternative Paths:	None

3.2.6.1 Read Profile Vouchers

A voucher documents a certain monetary value held by a customer, which may be spent only on specific goods or services with specific merchants. In the hotel industry, vouchers are commonly assigned to customers participating in a loyalty program as a reward for loyal stay history.

The Customer Profile Requester performs a look up of vouchers associated with customer profiles using parameters in a query and expects to receive a list of customer profile vouchers matching the condition(s) from the Customer Profile Responder.

3.2.8.1 Read Profile Classifications

A classification is a name or category assigned to customers with similar characteristics. Customer classifications enable service delivery and marketing business processes by providing quick identification of the type of customer an associate is interacting with.

The intention is to provide customized operational-related categorization to guest profiles to enhance the guest experience. It is not intended to replace existing/native fields in the schema.

3.3 Create New Profile

3.3.1 Overview

This use case describes the business and system processes and requirements for the creation of Customer profile functionality. Customer Profile Requester creates a new customer profile by passing the agreed upon customer profile attribute(s) to the Customer Profile Responder.

3.3.2 Roles

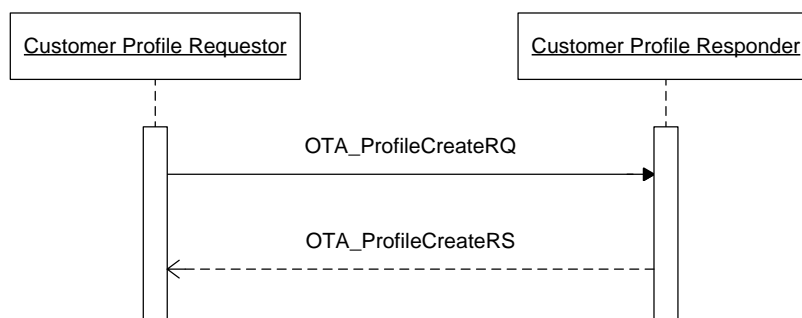

Role	Description	Example
Customer Profile Responder	A system that manages customer profiles.	Customer Loyalty Management application

Customer Profile Requester	A system that needs to be able to request a new customer profile to be created by the Customer Profile Responder.	Hotel Property Management System (PMS) Hotel Reservation System (CRS)
----------------------------	---	--

3.3.3 Use Case

Assumptions:	<ul style="list-style-type: none"> One or more systems have been identified as being able to initiate a create customer request for customer profiles. Customer Profile Requester is assigned to the appropriate role/group that has access to the create customer profile functionality. An appropriate set of profile attributes have been agreed upon by trading partners. The attributes will consist of both required and optional attributes.
Pre-conditions:	None
Trigger:	None
Basic Course of Events:	1. The Customer Profile Responder will communicate a success or failure (with reason or reasons) of the customer profile creation. The failure list may include an indication that the profile already exists. A successful response will include a unique identifier to be returned to the Customer Profile Requester.
Post-conditions:	None
Exception Path:	None
Alternative Paths:	None

3.4 Update Profile

3.4.1 Overview

This use case describes the business and system processes and requirements for the update of Customer profiles functionality. Customer Profile Requester performs an update of a customer profile by specifying an agreed upon customer profile unique identifier and passing updated attribute(s) to the Customer Profile Responder.

3.4.2 Roles

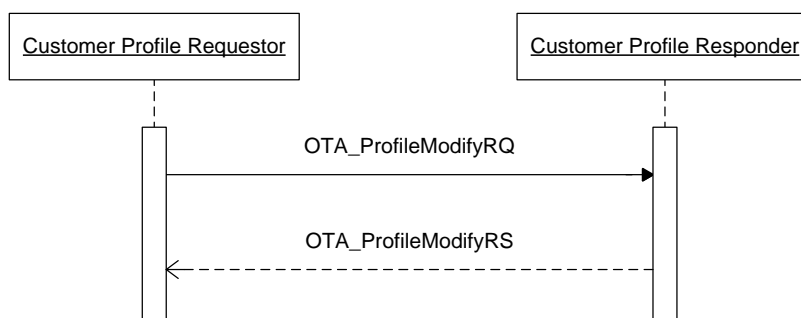

Role	Description	Example
Customer Profile Responder	A system that manages customer profiles.	Customer Loyalty Management application
Customer Profile Requester	A system that needs to be able to modify the contents of a customer profile.	Hotel Property Management System (PMS) Hotel Reservation System (CRS)

Customer Profile Subscriber	A system that has registered interest in being notified when new vouchers have been created for a given customer profile.	Hotel Property Management System (PMS) Hotel Reservation System (CRS)
Customer Profile Publisher	A system that needs to inform another system that a new voucher has been created for a given customer profile.	Customer Loyalty Management application

3.4.3 Use Case

Assumptions:	<ul style="list-style-type: none"> One or more systems have been identified as being a point-of-update (Customer Profile Responder) for customer profiles. Customer Profile Requester is assigned to the appropriate role/group that has access to the update customer profiles functionality. An appropriate set of update attributes have been agreed upon by trading partners. In certain circumstances, particular attributes may not be allowed to be updated by the requester.
Pre-conditions:	<ul style="list-style-type: none"> A unique customer profile identifier exists, enabling a one-to-one match, and is known by the Customer Profile Requester.
Trigger:	None
Basic Course of Events:	1. The Customer Profile Responder will communicate a success or failure (with reason or reasons) of the customer profile update.
Post-conditions:	None
Exception Path:	None
Alternative Paths:	None

3.4.6.1 Create Profile Vouchers

It is assumed all vouchers have a system of record where the voucher unique identifier is assigned. This use case is for the voucher system of record to create the voucher within a customer profile stored in another system. In conjunction with the Read Profile Voucher use case, the create profile vouchers use case allows for bi-directional voucher integration.

3.4.10.1 Manage Marketing Promotions Associated to a Profile

Promotions and offers are increasingly customer-specific. As the consumer has many options for becoming associated to an offer or promotion, as well as many channels in which these can originate, the need to associate these offers to an individual has become a priority. The goal is to enable offers and promotions to be associated to the customer profile and transmitted between systems so that the offer/promotion is 'persistent' across channels and options.

3.4.11 Sample Request

3.5 Merge Profiles

3.5.1 Overview

This use case describes the business and system processes and requirements for merging profiles. Customer Profile Requester has identified two or more profiles as merge candidates based on various matching criteria. One customer profile is designated as the survivor, “winning” or parent profile and the other(s) as the “losing” or child profile. The Merge Profile instruction commands the Customer Profile Responder to merge the losing profile(s) into the winning profile and the losing profiles are not necessarily available for default retrieval. This use case is optional.

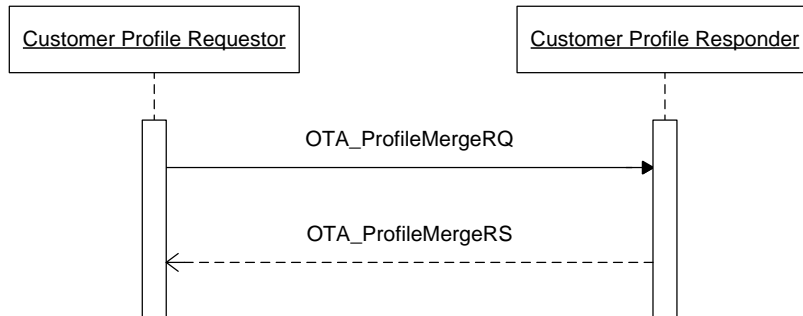

3.5.2 Roles

Role	Description	Example
Customer Profile Responder	A system that manages customer profiles.	Customer Loyalty Management application
Customer Profile Requester	A system that needs to be able to request that customer profiles be merged into a single customer profile.	Hotel Property Management System (PMS) Hotel Reservation System (CRS)

3.5.3 Use Case

Assumptions:	<ul style="list-style-type: none">Relationship between the designated Customer Profile Requester and Responder exists, with appropriate authentication and permissions extended by trading partners.<ul style="list-style-type: none">Some partners may not allow external partners to merge profiles.
Pre-conditions:	<ul style="list-style-type: none">Merge Profile instruction contains at least the profile identifiers of the winning record and all losing records.
Trigger:	None
Basic Course of Events:	<ul style="list-style-type: none">Completion/failure of merge transactions should trigger confirmation that the process is complete to the Customer Profile Requester.
Post-conditions:	<ul style="list-style-type: none">Advanced implementations may support “Unmerge” to correct errors, requiring the preservation of unique customer profile identifiers in winning records.
Exception Path:	None
Alternative Paths:	None

3.6 Enroll Loyalty Member

3.6.1 Overview

The use case to enroll a loyalty member applies to adding loyalty information to a customer profile, either existing or for new members of the program. Once a member is enrolled in a loyalty program, normal profile query processes will be able to view, or if applicable, update that information.

3.6.2 Roles

Role	Description	Example
Customer Loyalty Responder	A system that manages customer loyalty program memberships.	Loyalty Solution

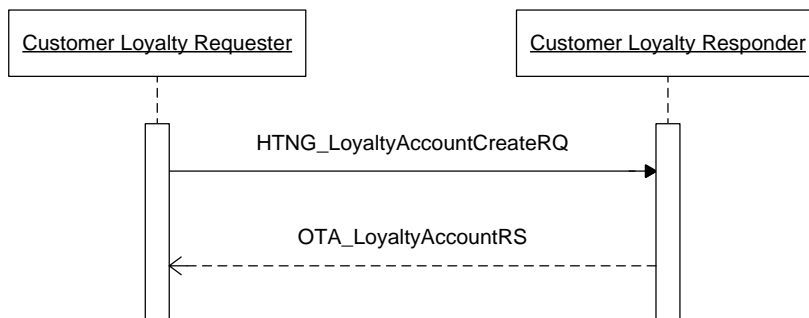

Customer Loyalty Requester	A system that needs to be able to request a new customer loyalty program member enrollment be created.	Property Management System Point of Sale (F&B or Retail) Central Reservations System Customer Relationship Management Other Marketing Solutions
----------------------------	--	---

3.6.3 Use Case

Summary:	This use case describes the recommended flow for enrolling a new member into a loyalty program.
Assumptions:	<ul style="list-style-type: none"> The following loyalty functionality is <u>not</u> in scope for this set of use cases or for this specification: <ul style="list-style-type: none"> Loyalty rewards accrual (ie; consumption) Loyalty rewards processing (ie; what is valid towards accrual, crediting of awards to an account, maintenance of accounts)
Pre-conditions:	<ul style="list-style-type: none"> One system is capable of administrating a Loyalty Program (enrolling new members). There has been an inquiry made for an existing profile and either the Customer Profile Master or the Customer Loyalty Solution has responded that no Loyalty Membership has been found for the Customer in question. Requestor has customer profile ID.
Trigger:	<ul style="list-style-type: none"> The Loyalty Requestor determines it has the need to link an existing customer profile record with a loyalty program.
Basic Course of Events:	<ol style="list-style-type: none"> Execute enrollment (request is not data elements, but a customer profile ID and, optionally, a member number if known) <ol style="list-style-type: none"> If no profile exists, then create new profile inclusive of Loyalty Information If profile exists, then update profile with Loyalty Information If requested enrollment matches an existing enrolled member in desired program, then response to include same as step 2 above.
Post-condition:	<ul style="list-style-type: none"> Customer Loyalty Requestor has a valid loyalty program membership ID associated to the profile in question.
Exception Path:	Return error if parameters supplied do not meet criteria or if profile not found.

Alternative Path:	<ol style="list-style-type: none"> 1. Customer has received a pre-printed membership card containing a valid member ID. 2. Customer Loyalty Requestor sends enrollment to Customer Profile Responder that includes member number assigned. 3. Customer Loyalty Responder enrolls Customer with program, program tier and pre-allocated ID.
-------------------	---

4 Messages

4.1 Search Profile / Read Profiles

4.1.1 Data Element Table – Request

Element @Attribute	Num	Description/Contents
HTNG_ReadRQ	1	Root element of the message.
@EchoToken	1	A reference for additional message identification, assigned by the requesting host system. When a request message includes an echo token, the corresponding response message MUST include an echo token with an identical value.
@TimeStamp	1	Indicates the creation date and time of the message in UTC using the following format specified by ISO 8601; YYYY-MM-DDThh:mm:ssZ with time values using the 24-hour clock (e.g., 20 November 2003, 1:59:38 pm UTC becomes 2003-11-20T13:59:38Z).
@Version	1	For all OpenTravel versioned messages, the version of the message is indicated by a decimal value.
HTNG_ReadRQ / RequestedComponents	0..1	A collection of requested components pertaining to guest profile. See 4.1.2 & 5.2.4
HTNG_ReadRS / RequestedComponents / RequestedComponent	1..n	An individual profile component to be retrieved.
@Name	1	The name of the category for the requested component.
@Extension	0..1	If @Name has a value of “Extension”, this field can be used to convey a custom category.
HTNG_ReadRQ / POS / Source	1	This holds details regarding the requestor. It may be repeated to also accommodate the delivery systems.
HTNG_ReadRQ / POS / Source / RequestorID	1	An identifier of the entity making the request (e.g., ATA/IATA/ID number, Electronic Reservation Service Provider (ERSP), Association of British Travel Agents (ABTA)).
@Type	0..1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).

Element @Attribute	Num	Description/Contents
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
HTNG_ReadRQ / UniqueID	0..1	An identifier used to uniquely reference an object in a system (e.g., an airline reservation reference, customer profile reference, booking confirmation number, or a reference to a previous availability quote).
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
HTNG_ReadRQ / ReadRequests	0..1	A grouping of Read Requests by travel vertical.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest	1..n	To request a profile when the profile identifier is not known.
@ProfileTypeCode	0..1	Code to specify a profile such as customer, tour operator, corporation, etc. Refer to OpenTravel Code List Profile Type (PRT).
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer	0..1	Detailed customer information used for searching profiles.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / PersonName	0..5	Detailed name information for the customer.
@Language	1	The language code for which the name data is represented.
@NameType	1	Former, Nickname, Alternate, etc.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.

Element @Attribute	Num	Description/Contents
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / PersonName / GivenName	0..5	Given name, first name or names.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / PersonName / MiddleName	0..3	The middle name of the person name.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / Telephone	0..9	Information on a telephone number for the customer.
@Extension	0..1	Extension to reach a specific party at the phone number.
@PhoneLocationType	0..1	Describes the location of the phone, such as Home, Office, Property Reservation Office, etc. Refer to OpenTravel Code List Phone Location Type (PLT).
@PhoneTechType	0..1	Indicates type of technology associated with this telephone number, such as Voice, Data, Fax, Pager, Mobile, TTY, etc. Refer to OpenTravel Code List Phone Technology Type (PTT).
@PhoneNumber	1	Telephone number assigned to a single location.
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@CountryAccessCode	0..1	Code assigned by telecommunications authorities for international country access identifier.

Element @Attribute	Num	Description/Contents
@AreaCityCode	0..1	Code assigned for telephones in a specific region, city, or area.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / Email	0..9	Email Address for the customer.
@EmailType	0..1	Defines the purpose of the e-mail address (e.g. personal, business, listserve). Refer to OpenTravel Code List Email Address Type (EAT).
@DefaultInd	0..1	When true, indicates a default value should be used.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
@TextFormat	0..1	HTML versus Plain Text.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / Address	0..9	Detailed information on an address for the customer.
@Type	0..1	Defines the type of address (e.g. home, business, other). Refer to OpenTravel Code List Communication Location Type (CLT).
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@UseType	0..1	Describes the use of the address (e.g. mailing, delivery, billing, etc.). Refer to OpenTravel Code List Address Use Type (AUT).
@Language	1..1	The language code for which the address data is represented.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / Address / AddressLine	0..5	When the address is unformatted (FormattedInd="false") these lines will contain free form address details. When the address is formatted and street number and street name must be sent independently, the street number will be sent using StreetNmbr, and the street name will be sent in the first AddressLine occurrence.

Element @Attribute	Num	Description/Contents
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / Address / CityName	0..1	City (e.g., Dublin), town, or postal station (i.e., a postal service territory, often used in a military address).
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / Address / PostalCode	0..1	Post Office Code number.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / Address / County	0..1	County or Region Name (e.g., Fairfax).
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / Address / StateProv	0..1	State or Province name (e.g., Texas).
@StateCode	0..1	The standard code or abbreviation for the state, province, or region.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / Address / CountryName	0..1	Country name (e.g., Ireland).
@Code	0..1	ISO 3166 code for a country.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / PaymentForm	0..1	Methods of providing funds and guarantees for travel by the customer.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / PaymentForm / PaymentCard	0..1	Details of a credit card.
@CardNumber	0..1	Credit card number embossed on the card.
@MaskedCardNumber	0..1	May be used to send a concealed credit card number (e.g., xxxxxxxxxxxx9922).
@CardCode	0..1	The 2 character code of the credit card issuer.
@ExpireDate	0..1	Indicates the ending date.
@CardNumberIsProxy	0..1	Indicates the value of @CardNumber is a Data Proxy value representing an actual credit card number.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / RelatedTraveler	0..9	Identifies a traveler associated with the customer.

Element @Attribute	Num	Description/Contents
@Relation	0..1	Indicates the type of relationship with the person in the profile, such as Spouse, Child, Family, Business Associate, Interest Group, Medical, Security, Other, etc.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / RelatedTraveler / UniqueID	0..1	Identifies the profile of the related traveler.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / RelatedTraveler / PersonName	0..5	Detailed name information for the customer.
@Language	1	The language code for which the name data is represented.
@DefaultInd	0..1	When true, indicates a default value should be used. At least one PersonName MUST be Primary.
@NameType	1	Former, Nickname, Alternate, etc.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / RelatedTraveler / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / RelatedTraveler / PersonName / GivenName	0..5	Given name, first name or names.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / RelatedTraveler / PersonName / MiddleName	0..3	The middle name of the person name.

Element @Attribute	Num	Description/Contents
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / RelatedTraveler / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / RelatedTraveler / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / RelatedTraveler / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson	0..1	Information on a contact person for the customer
@Relation	0..1	Indicates the type of relationship with the person in the profile, such as Spouse, Child, Family, Business Associate, Interest Group, Medical, Security, Other, etc.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / PersonName	0..5	Detailed name information for the customer.
@NameType	1	Former, Nickname, Alternate, etc.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / PersonName / GivenName	0..5	Given name, first name or names.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / PersonName / MiddleName	0..3	The middle name of the person name.

Element @Attribute	Num	Description/Contents
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / Telephone	0..9	Information on a telephone number for the contact person of the customer.
@Extension	0..1	Extension to reach a specific party at the phone number.
@PhoneLocationType	0..1	Describes the location of the phone, such as Home, Office, Property Reservation Office, etc. Refer to OpenTravel Code List Phone Location Type (PLT).
@PhoneTechType	0..1	Indicates type of technology associated with this telephone number, such as Voice, Data, Fax, Pager, Mobile, TTY, etc. Refer to OpenTravel Code List Phone Technology Type (PTT).
@PhoneNumber	1	Telephone number assigned to a single location.
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@CountryAccessCode	0..1	Code assigned by telecommunications authorities for international country access identifier.
@AreaCityCode	0..1	Code assigned for telephones in a specific region, city, or area.

Element @Attribute	Num	Description/Contents
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / Email	0..9	Email Address for the contact person for the customer.
@EmailType	0..1	Defines the purpose of the e-mail address (e.g. personal, business, listserve). Refer to OpenTravel Code List Email Address Type (EAT).
@DefaultInd	0..1	When true, indicates a default value should be used.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
@TextFormat	0..1	HTML versus Plain Text.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / Address	0..9	Detailed information on an address for the contact person for the customer.
@Type	0..1	Defines the type of address (e.g. home, business, other). Refer to OpenTravel Code List Communication Location Type (CLT).
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@UseType	0..1	Describes the use of the address (e.g. mailing, delivery, billing, etc.). Refer to OpenTravel Code List Address Use Type (AUT).
@Language	1..1	The language code for which the address data is represented.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / Address / AddressLine	0..5	When the address is unformatted (FormattedInd="false") these lines will contain free form address details. When the address is formatted and street number and street name must be sent independently, the street number will be sent using StreetNmbr, and the street name will be sent in the first AddressLine occurrence.

Element @Attribute	Num	Description/Contents
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / Address / CityName	0..1	City (e.g., Dublin), town, or postal station (i.e., a postal service territory, often used in a military address).
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / Address / PostalCode	0..1	Post Office Code number.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / Address / County	0..1	County or Region Name (e.g., Fairfax).
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / Address / StateProv	0..1	State or Province name (e.g., Texas).
@StateCode	0..1	The standard code or abbreviation for the state, province, or region.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / ContactPerson / Address / CountryName	0..1	Country name (e.g., Ireland).
@Code	0..1	ISO 3166 code for a country.
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / Document	0..9	Detailed document information for the customer (e.g., driver license, passport, visa).
@DocIssueCountry	0..1	Country where the document was issued.
@ExpireDate	0..1	Indicates the ending date.
@EffectiveDate	0..1	Indicates the starting date.
@BirthDate	0..1	Indicates the date of birth as indicated in the document, in ISO 8601 prescribed format.
@DocIssueLocation	0..1	Indicates the location where the document was issued.
@DocID	0..1	Unique number assigned by authorities to document.

Element @Attribute	Num	Description/Contents
@DocType	0..1	Indicates the type of document (e.g. Passport, Military ID, Drivers License, national ID, and Vaccination Certificate). Refer to OpenTravel Code List Document Type (DOC).
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / Document / DocHolderName	0..1	The name of the document holder in unformatted text (Mr. Sam Jones).
HTNG_ReadRQ / ReadRequests / ProfileReadRequest / Customer / CustLoyalty	0..9	Loyalty program information for the customer.
@SignupDate	0..1	Indicates when the member signed up for the loyalty program.
@ExpireDate	0..1	Indicates the ending date.
@PrimaryLoyaltyIndicator	0..1	When true, indicates this is the primary customer loyalty program and when false, indicates this is not the primary customer loyalty program.
@EffectiveDate	0..1	Indicates the starting date.
@LoyalLevel	0..1	Indicates special privileges in program assigned to individual.
@TravelSector	0..1	Identifies the travel sector. Refer to OpenTravel Code List Travel Sector (TVS).
@MembershipID	0..1	Unique identifier of the member in the program (membership number, account number, etc.).
@VendorCode	0..1	Indicate the partner(s)/vendor(s) for which the customer loyalty number is valid.
@CustomerValue	0..1	The supplier's ranking of the customer (e.g., VIP, numerical ranking).
@ProgramID	0..1	Identifier to indicate the company owner of the loyalty program.

4.1.2 Data Element Table – Response

Component Name	Element @Attribute	Num	Description/Contents
N/A	OTA_ProfileReadRS	1	Root element of the message.
N/A	@EchoToken	1	A reference for additional message identification, assigned by the requesting host system. When a request message includes an echo token, the corresponding response message MUST include an echo token with an identical value.
N/A	@TimeStamp	1	Indicates the creation date and time of the message in UTC using the following format specified by ISO 8601; YYYY–MM–DDThh:mm:ssZ with time values using the 24-hour clock (e.g., 20 November 2003, 1:59:38 pm UTC becomes 2003–11–20T13:59:38Z).
N/A	@Version	1	For all OpenTravel versioned messages, the version of the message is indicated by a decimal value.
N/A	@Target	0..1	Used to indicate whether the request is for the Test or Production system.
N/A	OTA_ProfileReadRS / Success	0..1	The presence of the empty Success element explicitly indicates that the OpenTravel versioned message succeeded.
N/A	OTA_ProfileReadRS / Warnings	0..1	Used in conjunction with the Success element to define one or more business errors.
N/A	OTA_ProfileReadRS / Warnings / Warning	1..n	Used when a message has been successfully processed to report any warnings or business errors that occurred.

Component Name	Element @Attribute	Num	Description/Contents
N/A	@Type	1	The Warning element MUST contain the Type attribute that uses a recommended set of values to indicate the warning type. The validating XSD can expect to accept values that it has NOT been explicitly coded for and process them by using Type ="Unknown". Refer to OpenTravel Code List Error Warning Type (EWT).
N/A	@Status	0..1	If present, recommended values are those enumerated in the OTA_ErrorRS, (NotProcessed Incomplete Complete Unknown) however, the data type is designated as string data, recognizing that trading partners may identify additional status conditions not included in the enumeration.
N/A	@ShortText	1	An abbreviated version of the error in textual format.
N/A	@Code	0..1	If present, this refers to a table of coded values exchanged between applications to identify errors or warnings. Refer to OpenTravel Code List Error Codes (ERR).
N/A	OTA_ProfileReadRS / Profiles	1	Container element for a collection of Profiles.
N/A	OTA_ProfileReadRS / Profiles / ProfileInfo	1..n	A collection of Profiles or Unique IDs of Profiles
N/A	OTA_ProfileReadRS / Profiles / ProfileInfo / UniqueID	0..9	A unique ID for a profile. This element repeats to accommodate multiple unique IDs for a single profile across multiple systems.

Component Name	Element @Attribute	Num	Description/Contents
N/A	@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
N/A	@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
N/A	@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
N/A	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile	1	Provides detailed information regarding either a company or a customer profile.
N/A	@CreateDateTime	0..1	Time stamp of the creation.
Communications	@ShareAllOptOutInd	0..1	When yes, a customer has explicitly opted out of marketing communication. This is used in combination with the ShareAllMarketInd and only one of these attributes should have a value of yes.
Communications	@ShareAllSynchInd	0..1	Permission for sharing all data in profile for synchronization of profiles held by other travel service providers
Communications	@ShareAllMarketInd	0..1	Permission for sharing all data in profile for marketing purposes. A yes value indicates that the customer has chosen to opt-in to marketing communication. This is used in combination with the ShareAllOptOutInd and only one of these attributes should have a value of yes.
N/A	@LastModifyDateTime	0..1	Time stamp of the last modification.

Component Name	Element @Attribute	Num	Description/Contents
N/A	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer	0..1	Detailed customer information for this profile.
Name	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / PersonName	0..5	Detailed name information for the customer.
Name	@Language	1	The language code for which the name data is represented.
Name	@DefaultInd	0..1	When true, indicates a default value should be used. At least one PersonName MUST be Primary.
Name	@NameType	1	Former, Nickname, Alternate, etc.
Name	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.
Name	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / PersonName / GivenName	0..5	Given name, first name or names.
Name	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / PersonName / MiddleName	0..3	The middle name of the person name.
Name	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
Name	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
Name	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)

Component Name	Element @Attribute	Num	Description/Contents
Telephone	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / Telephone	0..9	Information on a telephone number for the customer.
Telephone	@Extension	0..1	Extension to reach a specific party at the phone number.
Telephone	@PhoneLocationType	0..1	Describes the location of the phone, such as Home, Office, Property Reservation Office, etc. Refer to OpenTravel Code List Phone Location Type (PLT).
Telephone	@PhoneTechType	0..1	Indicates type of technology associated with this telephone number, such as Voice, Data, Fax, Pager, Mobile, TTY, etc. Refer to OpenTravel Code List Phone Technology Type (PTT).
Telephone	@PhoneNumber	1	Telephone number assigned to a single location.
Telephone	@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
Telephone	@DefaultInd	0..1	When true, indicates a default value should be used.
Telephone	@CountryAccessCode	0..1	Code assigned by telecommunications authorities for international country access identifier.
Telephone	@AreaCityCode	0..1	Code assigned for telephones in a specific region, city, or area.
Email	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / Email	0..9	Email Address for the customer.
Email	@EmailType	0..1	Defines the purpose of the e-mail address (e.g. personal, business, listserve). Refer to OpenTravel Code List Email Address Type (EAT).

Component Name	Element @Attribute	Num	Description/Contents
Email	@DefaultInd	0..1	When true, indicates a default value should be used.
Email	@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
Email	@TextFormat	0..1	HTML versus Plain Text.
Address	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / Address	0..9	Detailed information on an address for the customer.
Address	@Type	0..1	Defines the type of address (e.g. home, business, other). Refer to OpenTravel Code List Communication Location Type (CLT).
Address	@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
Address	@DefaultInd	0..1	When true, indicates a default value should be used.
Address	@UseType	0..1	Describes the use of the address (e.g. mailing, delivery, billing, etc.). Refer to OpenTravel Code List Address Use Type (AUT).
Address	@Language	1..1	The language code for which the address data is represented.
Address	@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.

Component Name	Element @Attribute	Num	Description/Contents
Address	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / Address / AddressLine	0..5	When the address is unformatted (FormattedInd="false") these lines will contain free form address details. When the address is formatted and street number and street name must be sent independently, the street number will be sent using StreetNmbr, and the street name will be sent in the first AddressLine occurrence.
Address	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / Address / CityName	0..1	City (e.g., Dublin), town, or postal station (i.e., a postal service territory, often used in a military address).
Address	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / Address / PostalCode	0..1	Post Office Code number.
Address	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / Address / County	0..1	County or Region Name (e.g., Fairfax).
Address	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / Address / StateProv	0..1	State or Province name (e.g., Texas).
Address	@StateCode	0..1	The standard code or abbreviation for the state, province, or region.
Address	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / Address / CountryName	0..1	Country name (e.g., Ireland).
Address	@Code	0..1	ISO 3166 code for a country.
Social Media	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / SocialMedia	0..9	

Component Name	Element @Attribute	Num	Description/Contents
Social Media	@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
Social Media	@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
Social Media	@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
Social Media	@URL	0..1	
Social Media	@ShareSynchInd	0..1	Permission for sharing data in profile for synchronization of profiles held by other travel service providers
Social Media	@ShareMarketInd	0..1	Permission for sharing data in profile for marketing purposes. A yes value indicates that the customer has chosen to opt-in to marketing communication. This is used in combination with the ShareAllOptOutInd and only one of these attributes should have a value of yes.
Payment Card	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / PaymentForm	0..1	Methods of providing funds and guarantees for travel by the customer.
Payment Card	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / PaymentForm / PaymentCard	0..1	Details of a credit card.
Payment Card	@CardNumber	0..1	Credit card number embossed on the card.
Payment Card	@MaskedCardNumber	0..1	May be used to send a concealed credit card number (e.g., xxxxxxxxxxxxx9922).
Payment Card	@CardCode	0..1	The 2 character code of the credit card issuer.

Component Name	Element @Attribute	Num	Description/Contents
Payment Card	@ExpireDate	0..1	Indicates the ending date.
Payment Card	@CardNumberIsProxy	0..1	Indicates the value of @CardNumber is a Data Proxy value representing an actual credit card number.
Voucher	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / PaymentForm / Voucher	1	Details of a paper or electronic document indicating prepayment.
Voucher	@EffectiveDate	1	Indicates the starting date
Voucher	@ExpireDate	0..1	Indicates the ending date.
Voucher	@SeriesCode	0..1	Identification of a series of coupons or vouchers identified by serial number(s).
Voucher	@SupplierIdentifier	0..1	Unique identifier of the electronic voucher, created by the supplier.
Voucher	@Identifier	1	Unique identifier of the electronic voucher.
Voucher	@IssueReason	1	A code identifying the voucher type. Examples: Loyalty, Service Recovery, Restaurant.
Voucher	@DeliveryMethod	0..1	How was the voucher delivered to the customer? Examples: Email, Mail, SMS, etc.
Voucher	@MonetaryValue	0..1	
Voucher	@CurrencyCode	0..1	
Voucher	@Status	1	The current voucher status. Examples: Valid, Redeemed, Expired.
Voucher	@Remark	0..1	
Related Traveler	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / RelatedTraveler	0..9	Identifies a traveler associated with the customer.

Component Name	Element @Attribute	Num	Description/Contents
Related Traveler	@Relation	0..1	Indicates the type of relationship with the person in the profile, such as Spouse, Child, Family, Business Associate, Interest Group, Medical, Security, Other, etc.
Related Traveler	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / RelatedTraveler / UniqueID	0..1	Identifies the profile of the related traveler.
Related Traveler	@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
Related Traveler	@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
Related Traveler	@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
Related Traveler	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / RelatedTraveler / PersonName	0..5	Detailed name information for the customer.
Related Traveler	@Language	1	The language code for which the name data is represented.
Related Traveler	@DefaultInd	0..1	When true, indicates a default value should be used. At least one PersonName MUST be Primary.
Related Traveler	@NameType	1	Former, Nickname, Alternate, etc.
Related Traveler	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / RelatedTraveler / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.

Component Name	Element @Attribute	Num	Description/Contents
Related Traveler	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / RelatedTraveler / PersonName / GivenName	0..5	Given name, first name or names.
Related Traveler	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / RelatedTraveler / PersonName / MiddleName	0..3	The middle name of the person name.
Related Traveler	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / RelatedTraveler / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
Related Traveler	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / RelatedTraveler / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
Related Traveler	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / RelatedTraveler / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson	0..1	Information on a contact person for the customer
Contact Person	@Relation	0..1	Indicates the type of relationship with the person in the profile, such as Spouse, Child, Family, Business Associate, Interest Group, Medical, Security, Other, etc.
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / PersonName	0..5	Detailed name information for the customer.
Contact Person	@NameType	1	Former, Nickname, Alternate, etc.

Component Name	Element @Attribute	Num	Description/Contents
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / PersonName / GivenName	0..5	Given name, first name or names.
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / PersonName / MiddleName	0..3	The middle name of the person name.
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / Telephone	0..9	Information on a telephone number for the contact person of the customer.
Contact Person	@Extension	0..1	Extension to reach a specific party at the phone number.
Contact Person	@PhoneLocationType	0..1	Describes the location of the phone, such as Home, Office, Property Reservation Office, etc. Refer to OpenTravel Code List Phone Location Type (PLT).

Component Name	Element @Attribute	Num	Description/Contents
Contact Person	@PhoneTechType	0..1	Indicates type of technology associated with this telephone number, such as Voice, Data, Fax, Pager, Mobile, TTY, etc. Refer to OpenTravel Code List Phone Technology Type (PTT).
Contact Person	@PhoneNumber	1	Telephone number assigned to a single location.
Contact Person	@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
Contact Person	@DefaultInd	0..1	When true, indicates a default value should be used.
Contact Person	@CountryAccessCode	0..1	Code assigned by telecommunications authorities for international country access identifier.
Contact Person	@AreaCityCode	0..1	Code assigned for telephones in a specific region, city, or area.
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / Email	0..9	Email Address for the contact person for the customer.
Contact Person	@EmailType	0..1	Defines the purpose of the e-mail address (e.g. personal, business, listserve). Refer to OpenTravel Code List Email Address Type (EAT).
Contact Person	@DefaultInd	0..1	When true, indicates a default value should be used.
Contact Person	@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
Contact Person	@TextFormat	0..1	HTML versus Plain Text.
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / Address	0..9	Detailed information on an address for the contact person for the customer.

Component Name	Element @Attribute	Num	Description/Contents
Contact Person	@Type	0..1	Defines the type of address (e.g. home, business, other). Refer to OpenTravel Code List Communication Location Type (CLT).
Contact Person	@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
Contact Person	@DefaultInd	0..1	When true, indicates a default value should be used.
Contact Person	@UseType	0..1	Describes the use of the address (e.g. mailing, delivery, billing, etc.). Refer to OpenTravel Code List Address Use Type (AUT).
Contact Person	@Language	1..1	The language code for which the address data is represented.
Contact Person	@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / Address / AddressLine	0..5	When the address is unformatted (FormattedInd="false") these lines will contain free form address details. When the address is formatted and street number and street name must be sent independently, the street number will be sent using StreetNmbr, and the street name will be sent in the first AddressLine occurrence.
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / Address / CityName	0..1	City (e.g., Dublin), town, or postal station (i.e., a postal service territory, often used in a military address).

Component Name	Element @Attribute	Num	Description/Contents
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / Address / PostalCode	0..1	Post Office Code number.
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / Address / County	0..1	County or Region Name (e.g., Fairfax).
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / Address / StateProv	0..1	State or Province name (e.g., Texas).
Contact Person	@StateCode	0..1	The standard code or abbreviation for the state, province, or region.
Contact Person	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / ContactPerson / Address / CountryName	0..1	Country name (e.g., Ireland).
Contact Person	@Code	0..1	ISO 3166 code for a country.
Document	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / Document	0..9	Detailed document information for the customer (e.g., driver license, passport, visa).
Document	@DocIssueCountry	0..1	Country where the document was issued.
Document	@ExpireDate	0..1	Indicates the ending date.
Document	@EffectiveDate	0..1	Indicates the starting date.
Document	@BirthDate	0..1	Indicates the date of birth as indicated in the document, in ISO 8601 prescribed format.
Document	@DocIssueLocation	0..1	Indicates the location where the document was issued.
Document	@DocID	0..1	Unique number assigned by authorities to document.

Component Name	Element @Attribute	Num	Description/Contents
Document	@DocType	0..1	Indicates the type of document (e.g. Passport, Military ID, Drivers License, national ID, and Vaccination Certificate). Refer to OpenTravel Code List Document Type (DOC).
Document	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / Document / DocHolderName	0..1	The name of the document holder in unformatted text (Mr. Sam Jones).
Cust Loyalty	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / CustLoyalty	0..9	Loyalty program information for the customer.
Cust Loyalty	@SignupDate	0..1	Indicates when the member signed up for the loyalty program.
Cust Loyalty	@ExpireDate	0..1	Indicates the ending date.
Cust Loyalty	@PrimaryLoyaltyIndicator	0..1	When true, indicates this is the primary customer loyalty program and when false, indicates this is not the primary customer loyalty program.
Cust Loyalty	@EffectiveDate	0..1	Indicates the starting date.
Cust Loyalty	@LoyalLevel	0..1	Indicates special privileges in program assigned to individual.
Cust Loyalty	@TravelSector	0..1	Identifies the travel sector. Refer to OpenTravel Code List Travel Sector (TVS).
Cust Loyalty	@MembershipID	0..1	Unique identifier of the member in the program (membership number, account number, etc.).
Cust Loyalty	@VendorCode	0..1	Indicate the partner(s)/vendor(s) for which the customer loyalty number is valid.
Cust Loyalty	@CustomerValue	0..1	The supplier's ranking of the customer (e.g., VIP, numerical ranking).

Component Name	Element @Attribute	Num	Description/Contents
Cust Loyalty	@ProgramID	0..1	Identifier to indicate the company owner of the loyalty program.
N/A	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / TPA_Extensions / TPA_Extension	0..1	
N/A	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / TPA_Extensions / TPA_Extension / Classifications	0..1	
N/A	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / TPA_Extensions / TPA_Extension / Classifications / Classification	1..n	
N/A	@HotelCode	0..1	Describes whether the line item refers to an individual Hotel property.
N/A	@ChainCode	0..1	Describes whether the line item refers to a Chain (e.g. Hilton, Hyatt, Marriott, etc.)
N/A	@BrandCode	0..1	Describes whether the line item refers to a Brand (e.g. Doubletree, Hyatt Place, Courtyard, etc.)
N/A	@IsGlobal	0..1	Indicates whether this classification applies to all hotels in the receiving system.
N/A	@Category	0..1	An implementation-specific categorization or grouping of like Types.
N/A	@Type	1	The specific classification.
N/A	@Value	1	The value of the classification.

Component Name	Element @Attribute	Num	Description/Contents
N/A	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / TPA_Extensions / PromotionalOffers	0..1	A collection of offers.
N/A	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Customer / TPA_Extensions / PromotionalOffer	1..n	
N/A	@ID	1	An identifier used to identify a specific promotion offered to a given profile.
N/A	@ID_Context	1	The system that generated the promotion.
N/A	@PromotionCode	1	A code identifying a marketing promotion.
N/A	@OfferDate		Date the offer was introduced to the customer.
N/A	@StartDate	1	The date at which the offer becomes active.
N/A	@ExpirationDate	1	The date at which the offer is no longer valid.
N/A	@OfferStatus	1	The status the off the offer (e.g. Offered, Accepted, Rejected, Fulfilled).
N/A	@Description	0..1	A short description of the offer.
Preferences	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / PrefCollections	0..1	A collection of preference collections.
Preferences	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / PrefCollections / PrefCollection	1..n	Aggregation of customer travel needs.
Preferences	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / PrefCollections / PrefCollection / HotelPref	0..n	A set of preferences for hotel stay.

Component Name	Element @Attribute	Num	Description/Contents
Preferences	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / PrefCollections / PrefCollection / HotelPref / TPA_Extensions	0..1	A placeholder in the schema to allow for additional elements and attributes to be included if required, per Trading Partner Agreement (TPA).
Preferences	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / PrefCollections / PrefCollection / HotelPref / TPA_Extensions / TPA_Extension	1..n	An individual preference extension.
Preferences	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / PrefCollections / PrefCollection / HotelPref / TPA_Extensions / TPA_Extension / Preferences	0..1	A collection of profile preferences.
Preferences	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / PrefCollections / PrefCollection / HotelPref / TPA_Extensions / TPA_Extension / Preferences / Preference	1..n	An individual preference.
Preferences	@HotelCode	0..1	Describes whether the line item refers to an individual Hotel property.
Preferences	@ChainCode	0..1	Describes whether the line item refers to a Chain (e.g. Courtyard, Doubletree).
Preferences	@BrandCode	0..1	Describes whether the line item refers to a Brand (e.g. Marriott, Hilton).
Preferences	@IsGlobal	0..1	A boolean value indicating this preference applies to all hotels in the receiving system.
Preferences	@Category	0..1	The summary group describing a set of preferences (Room).

Component Name	Element @Attribute	Num	Description/Contents
Preferences	@Type	1	The specific preference requested (Bed Type).
Preferences	@Value	1	The value of the preference (King).
Preferences	@Quantity	0..1	For those preferences for which a quantity is applicable, and not implicitly in the preference itself, this is used to describe the number of items accounted for in the preference.
Comments	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Comments	0..1	A collection of comments
Comments	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Comments / Comment	1..n	Comments related to the profile.
Comments	@Language	0..1	Identifies the language.
Comments	@CreateDateTime	0..1	Time stamp of the creation.
Comments	@Name	0..1	In many cases the description repeats, this will allow you to define the information that is being sent, typically used when multiple occurrences of ParagraphType are being sent.
Comments	@CreatorID	0..1	ID of creator. The creator could be a software system identifier or an identifier of an employee responsible for the creation.
Comments	@GuestViewable	0..1	When true, the comment may be shown to the consumer. When false, the comment may not be shown to the consumer.
Comments	@LastModifierID	0..1	Identifies the last software system or person to modify a record.
Comments	@LastModifyDateTime	0..1	Time stamp of last modification.

Component Name	Element @Attribute	Num	Description/Contents
Comments	OTA_ProfileReadRS / Profiles / ProfileInfo / Profile / Comments / Comment / Text	1	Formatted text content.

4.2 Create New Profile

4.2.1 Data Element Table – Request

Element @Attribute	Num	Description/Contents
OTA_ProfileCreateRQ	1	Root element of the message.
@EchoToken	1	A reference for additional message identification, assigned by the requesting host system. When a request message includes an echo token, the corresponding response message MUST include an echo token with an identical value.
@TimeStamp	1	Indicates the creation date and time of the message in UTC using the following format specified by ISO 8601; YYYY-MM-DDThh:mm:ssZ with time values using the 24-hour clock (e.g., 20 November 2003, 1:59:38 pm UTC becomes 2003-11-20T13:59:38Z).
@Version	1	For all OpenTravel versioned messages, the version of the message is indicated by a decimal value.
OTA_ProfileCreateRQ / POS / Source	1	This holds details regarding the requestor. It may be repeated to also accommodate the delivery systems.

Element @Attribute	Num	Description/Contents
OTA_ProfileCreateRQ / POS / Source / RequestorID	1	An identifier of the entity making the request (e.g., ATA/IATA/ID number, Electronic Reservation Service Provider (ERSP), Association of British Travel Agents (ABTA)).
@Type	0..1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
OTA_ProfileCreateRQ / UniqueID	1	Identifies the profile to be modified together with the owner of the profile or an id provided by the client.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
OTA_ProfileCreateRQ / Profile	1	A full overlay of profile information containing the modified data.
@CreateDateTime	0..1	Time stamp of the creation.
@ShareAllOptOutInd	0..1	When yes, a customer has explicitly opted out of marketing communication. This is used in combination with the ShareAllMarketInd and only one of these attributes should have a value of yes.
@ShareAllSynchInd	0..1	Permission for sharing all data in profile for synchronization of profiles held by other travel service providers

Element @Attribute	Num	Description/Contents
@ShareAllMarketInd	0..1	Permission for sharing all data in profile for marketing purposes. A yes value indicates that the customer has chosen to opt-in to marketing communication. This is used in combination with the ShareAllOptOutInd and only one of these attributes should have a value of yes.
@LastModifyDateTime	0..1	Time stamp of the last modification.
OTA_ProfileCreateRQ / Profile / Customer	0..1	Detailed customer information for this profile.
OTA_ProfileCreateRQ / Profile / Customer / PersonName	0..5	Detailed name information for the customer.
@Language	1	The language code for which the name data is represented.
@DefaultInd	0..1	When true, indicates a default value should be used. At least one PersonName MUST be Primary.
@NameType	1	Former, Nickname, Alternate, etc.
OTA_ProfileCreateRQ / Profile / Customer / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.
OTA_ProfileCreateRQ / Profile / Customer / PersonName / GivenName	0..5	Given name, first name or names.
OTA_ProfileCreateRQ / Profile / Customer / PersonName / MiddleName	0..3	The middle name of the person name.
OTA_ProfileCreateRQ / Profile / Customer / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
OTA_ProfileCreateRQ / Profile / Customer / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
OTA_ProfileCreateRQ / Profile / Customer / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)

Element @Attribute	Num	Description/Contents
OTA_ProfileCreateRQ / Profile / Customer / Telephone	0..9	Information on a telephone number for the customer.
@Extension	0..1	Extension to reach a specific party at the phone number.
@PhoneLocationType	0..1	Describes the location of the phone, such as Home, Office, Property Reservation Office, etc. Refer to OpenTravel Code List Phone Location Type (PLT).
@PhoneTechType	0..1	Indicates type of technology associated with this telephone number, such as Voice, Data, Fax, Pager, Mobile, TTY, etc. Refer to OpenTravel Code List Phone Technology Type (PTT).
@PhoneNumber	1	Telephone number assigned to a single location.
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@CountryAccessCode	0..1	Code assigned by telecommunications authorities for international country access identifier.
@AreaCityCode	0..1	Code assigned for telephones in a specific region, city, or area.
OTA_ProfileCreateRQ / Profile / Customer / Email	0..9	Email Address for the customer.
@EmailType	0..1	Defines the purpose of the e-mail address (e.g. personal, business, listserve). Refer to OpenTravel Code List Email Address Type (EAT).
@DefaultInd	0..1	When true, indicates a default value should be used.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
@TextFormat	0..1	HTML versus Plain Text.
OTA_ProfileCreateRQ / Profile / Customer / Address	0..9	Detailed information on an address for the customer.
@Type	0..1	Defines the type of address (e.g. home, business, other). Refer to OpenTravel Code List Communication Location Type (CLT).

Element @Attribute	Num	Description/Contents
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@UseType	0..1	Describes the use of the address (e.g. mailing, delivery, billing, etc.). Refer to OpenTravel Code List Address Use Type (AUT).
@Language	1..1	The language code for which the address data is represented.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
OTA_ProfileCreateRQ / Profile / Customer / Address / AddressLine	0..5	When the address is unformatted (FormattedInd="false") these lines will contain free form address details. When the address is formatted and street number and street name must be sent independently, the street number will be sent using StreetNmbr, and the street name will be sent in the first AddressLine occurrence.
OTA_ProfileCreateRQ / Profile / Customer / Address / CityName	0..1	City (e.g., Dublin), town, or postal station (i.e., a postal service territory, often used in a military address).
OTA_ProfileCreateRQ / Profile / Customer / Address / PostalCode	0..1	Post Office Code number.
OTA_ProfileCreateRQ / Profile / Customer / Address / County	0..1	County or Region Name (e.g., Fairfax).
OTA_ProfileCreateRQ / Profile / Customer / Address / StateProv	0..1	State or Province name (e.g., Texas).
@StateCode	0..1	The standard code or abbreviation for the state, province, or region.
OTA_ProfileCreateRQ / Profile / Customer / Address / CountryName	0..1	Country name (e.g., Ireland).
@Code	0..1	ISO 3166 code for a country.
OTA_ProfileCreateRQ / Profile / Customer / PaymentForm	0..1	Methods of providing funds and guarantees for travel by the customer.

Element @Attribute	Num	Description/Contents
OTA_ProfileCreateRQ / Profile / Customer / PaymentForm / PaymentCard	0..1	Details of a credit card.
@CardNumber	0..1	Credit card number embossed on the card.
@MaskedCardNumber	0..1	May be used to send a concealed credit card number (e.g., xxxxxxxxxxxx9922).
@CardCode	0..1	The 2 character code of the credit card issuer.
@ExpireDate	0..1	Indicates the ending date.
@CardNumberIsProxy	0..1	Indicates the value of @CardNumber is a Data Proxy value representing an actual credit card number.
OTA_ProfileCreateRQ / Profile / Customer / RelatedTraveler	0..9	Identifies a traveler associated with the customer.
@Relation	0..1	Indicates the type of relationship with the person in the profile, such as Spouse, Child, Family, Business Associate, Interest Group, Medical, Security, Other, etc.
OTA_ProfileCreateRQ / Profile / Customer / RelatedTraveler / UniqueID	0..1	Identifies the profile of the related traveler.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
OTA_ProfileCreateRQ / Profile / Customer / RelatedTraveler / PersonName	0..5	Detailed name information for the customer.
@Language	1	The language code for which the name data is represented.
@DefaultInd	0..1	When true, indicates a default value should be used. At least one PersonName MUST be Primary.
@NameType	1	Former, Nickname, Alternate, etc.

Element @Attribute	Num	Description/Contents
OTA_ProfileCreateRQ / Profile / Customer / RelatedTraveler / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.
OTA_ProfileCreateRQ / Profile / Customer / RelatedTraveler / PersonName / GivenName	0..5	Given name, first name or names.
OTA_ProfileCreateRQ / Profile / Customer / RelatedTraveler / PersonName / MiddleName	0..3	The middle name of the person name.
OTA_ProfileCreateRQ / Profile / Customer / RelatedTraveler / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
OTA_ProfileCreateRQ / Profile / Customer / RelatedTraveler / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
OTA_ProfileCreateRQ / Profile / Customer / RelatedTraveler / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson	0..1	Information on a contact person for the customer
@Relation	0..1	Indicates the type of relationship with the person in the profile, such as Spouse, Child, Family, Business Associate, Interest Group, Medical, Security, Other, etc.
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / PersonName	0..5	Detailed name information for the customer.
@NameType	1	Former, Nickname, Alternate, etc.
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / PersonName / GivenName	0..5	Given name, first name or names.

Element @Attribute	Num	Description/Contents
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / PersonName / MiddleName	0..3	The middle name of the person name.
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / Telephone	0..9	Information on a telephone number for the contact person of the customer.
@Extension	0..1	Extension to reach a specific party at the phone number.
@PhoneLocationType	0..1	Describes the location of the phone, such as Home, Office, Property Reservation Office, etc. Refer to OpenTravel Code List Phone Location Type (PLT).
@PhoneTechType	0..1	Indicates type of technology associated with this telephone number, such as Voice, Data, Fax, Pager, Mobile, TTY, etc. Refer to OpenTravel Code List Phone Technology Type (PTT).
@PhoneNumber	1	Telephone number assigned to a single location.
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@CountryAccessCode	0..1	Code assigned by telecommunications authorities for international country access identifier.
@AreaCityCode	0..1	Code assigned for telephones in a specific region, city, or area.

Element @Attribute	Num	Description/Contents
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / Email	0..9	Email Address for the contact person for the customer.
@EmailType	0..1	Defines the purpose of the e-mail address (e.g. personal, business, listserve). Refer to OpenTravel Code List Email Address Type (EAT).
@DefaultInd	0..1	When true, indicates a default value should be used.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
@TextFormat	0..1	HTML versus Plain Text.
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / Address	0..9	Detailed information on an address for the contact person for the customer.
@Type	0..1	Defines the type of address (e.g. home, business, other). Refer to OpenTravel Code List Communication Location Type (CLT).
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@UseType	0..1	Describes the use of the address (e.g. mailing, delivery, billing, etc.). Refer to OpenTravel Code List Address Use Type (AUT).
@Language	1..1	The language code for which the address data is represented.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / Address / AddressLine	0..5	When the address is unformatted (FormattedInd="false") these lines will contain free form address details. When the address is formatted and street number and street name must be sent independently, the street number will be sent using StreetNmbr, and the street name will be sent in the first AddressLine occurrence.

Element @Attribute	Num	Description/Contents
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / Address / CityName	0..1	City (e.g., Dublin), town, or postal station (i.e., a postal service territory, often used in a military address).
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / Address / PostalCode	0..1	Post Office Code number.
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / Address / County	0..1	County or Region Name (e.g., Fairfax).
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / Address / StateProv	0..1	State or Province name (e.g., Texas).
@StateCode	0..1	The standard code or abbreviation for the state, province, or region.
OTA_ProfileCreateRQ / Profile / Customer / ContactPerson / Address / CountryName	0..1	Country name (e.g., Ireland).
@Code	0..1	ISO 3166 code for a country.
OTA_ProfileCreateRQ / Profile / Customer / Document	0..9	Detailed document information for the customer (e.g., driver license, passport, visa).
@DocIssueCountry	0..1	Country where the document was issued.
@ExpireDate	0..1	Indicates the ending date.
@EffectiveDate	0..1	Indicates the starting date.
@BirthDate	0..1	Indicates the date of birth as indicated in the document, in ISO 8601 prescribed format.
@DocIssueLocation	0..1	Indicates the location where the document was issued.
@DocID	0..1	Unique number assigned by authorities to document.
@DocType	0..1	Indicates the type of document (e.g. Passport, Military ID, Drivers License, national ID, and Vaccination Certificate). Refer to OpenTravel Code List Document Type (DOC).

Element @Attribute	Num	Description/Contents
OTA_ProfileCreateRQ / Profile / Customer / Document / DocHolderName	0..1	The name of the document holder in unformatted text (Mr. Sam Jones).
OTA_ProfileCreateRQ / Profile / Customer / CustLoyalty	0..9	Loyalty program information for the customer.
@SignupDate	0..1	Indicates when the member signed up for the loyalty program.
@ExpireDate	0..1	Indicates the ending date.
@PrimaryLoyaltyIndicator	0..1	When true, indicates this is the primary customer loyalty program and when false, indicates this is not the primary customer loyalty program.
@EffectiveDate	0..1	Indicates the starting date.
@LoyalLevel	0..1	Indicates special privileges in program assigned to individual.
@TravelSector	0..1	Identifies the travel sector. Refer to OpenTravel Code List Travel Sector (TVS).
@MembershipID	0..1	Unique identifier of the member in the program (membership number, account number, etc.).
@VendorCode	0..1	Indicate the partner(s)/vendor(s) for which the customer loyalty number is valid.
@CustomerValue	0..1	The supplier's ranking of the customer (e.g., VIP, numerical ranking).
@ProgramID	0..1	Identifier to indicate the company owner of the loyalty program.
OTA_ProfileCreateRQ / Profile / PrefCollections	0..1	A collection of preference collections.
OTA_ProfileCreateRQ / Profile / PrefCollections / PrefCollection	1..n	Aggregation of customer travel needs.
OTA_ProfileCreateRQ / Profile / PrefCollections / PrefCollection / HotelPref	0..n	A set of preferences for hotel stay.
OTA_ProfileCreateRQ / Profile / PrefCollections / PrefCollection / HotelPref / TPA_Extensions	0..1	A placeholder in the schema to allow for additional elements and attributes to be included if required, per Trading Partner Agreement (TPA).

Element @Attribute	Num	Description/Contents
OTA_ProfileCreateRQ / Profile / PrefCollections / PrefCollection / HotelPref / TPA_Extensions / TPA_Extension	1..n	An individual preference extension.
OTA_ProfileCreateRQ / Profile / PrefCollections / PrefCollection / HotelPref / TPA_Extensions / TPA_Extension / Preferences	0..1	A collection of profile preferences.
OTA_ProfileCreateRQ / Profile / PrefCollections / PrefCollection / HotelPref / TPA_Extensions / TPA_Extension / Preferences / Preference	1..n	An individual preference.
@HotelCode	0..1	Describes whether the line item refers to an individual Hotel property.
@ChainCode	0..1	Describes whether the line item refers to a Chain (e.g. Courtyard, Doubletree).
@BrandCode	0..1	Describes whether the line item refers to a Brand (e.g. Marriott, Hilton).
@IsGlobal	0..1	A boolean value indicating this preference applies to all hotels in the receiving system.
@Category	0..1	The summary group describing a set of preferences (Room).
@Type	1	The specific preference requested (Bed Type).
@Value	1	The value of the preference (King).
@Quantity	0..1	For those preferences for which a quantity is applicable, and not implicitly in the preference itself, this is used to describe the number of items accounted for in the preference.
OTA_ProfileCreateRQ / Profile / Comments	0..1	A collection of comments
OTA_ProfileCreateRQ / Profile / Comments / Comment	1..n	Comments related to the profile.
@Language	0..1	Identifies the language.
@CreateDateTime	0..1	Time stamp of the creation.

Element @Attribute	Num	Description/Contents
@Name	0..1	In many cases the description repeats, this will allow you to define the information that is being sent, typically used when multiple occurrences of ParagraphType are being sent.
@CreatorID	0..1	ID of creator. The creator could be a software system identifier or an identifier of an employee responsible for the creation.
@GuestViewable	0..1	When true, the comment may be shown to the consumer. When false, the comment may not be shown to the consumer.
@LastModifierID	0..1	Identifies the last software system or person to modify a record.
@LastModifyDateTime	0..1	Time stamp of last modification.
OTA_ProfileCreateRQ / Profile / Comments / Comment / Text	1	Formatted text content.

4.2.2 Data Element Table – Response

Element @Attribute	Num	Description/Contents
OTA_ProfileCreateRS	1	Root element of the message.
@EchoToken	1	A reference for additional message identification, assigned by the requesting host system. When a request message includes an echo token, the corresponding response message MUST include an echo token with an identical value.
@TimeStamp	1	Indicates the creation date and time of the message in UTC using the following format specified by ISO 8601; YYYY-MM-DDThh:mm:ssZ with time values using the 24-hour clock (e.g., 20 November 2003, 1:59:38 pm UTC becomes 2003-11-20T13:59:38Z).
@Version	1	For all OpenTravel versioned messages, the version of the message is indicated by a decimal value.
@Target	0..1	Used to indicate whether the request is for the Test or Production system.
OTA_ProfileCreateRS / Success	0..1	The presence of the empty Success element explicitly indicates that the OpenTravel versioned message succeeded.

Element @Attribute	Num	Description/Contents
OTA_ProfileCreateRS / Warnings	0..1	Used in conjunction with the Success element to define one or more business errors.
OTA_ProfileCreateRS / Warnings / Warning	1..n	Used when a message has been successfully processed to report any warnings or business errors that occurred.
@Type	1	The Warning element MUST contain the Type attribute that uses a recommended set of values to indicate the warning type. The validating XSD can expect to accept values that it has NOT been explicitly coded for and process them by using Type ="Unknown". Refer to OpenTravel Code List Error Warning Type (EWT).
@Status	0..1	If present, recommended values are those enumerated in the OTA_ErrorRS, (NotProcessed Incomplete Complete Unknown) however, the data type is designated as string data, recognizing that trading partners may identify additional status conditions not included in the enumeration.
@ShortText	1	An abbreviated version of the error in textual format.
@Code	0..1	If present, this refers to a table of coded values exchanged between applications to identify errors or warnings. Refer to OpenTravel Code List Error Codes (ERR).
OTA_ProfileCreateRS / UniqueID	1..9	Used to convey the identity of the created profile, the owner of the profile, or an id provided by the client.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.

4.3 Update Profile

4.3.1 Data Element Table – Request

Element @Attribute	Num	Description/Contents
OTA_ProfileModifyRQ	1	Root element of the message.
@EchoToken	1	A reference for additional message identification, assigned by the requesting host system. When a request message includes an echo token, the corresponding response message MUST include an echo token with an identical value.
@TimeStamp	1	Indicates the creation date and time of the message in UTC using the following format specified by ISO 8601; YYYY-MM-DDThh:mm:ssZ with time values using the 24-hour clock (e.g., 20 November 2003, 1:59:38 pm UTC becomes 2003-11-20T13:59:38Z).
@Version	1	For all OpenTravel versioned messages, the version of the message is indicated by a decimal value.
OTA_ProfileModifyRQ / POS / Source	1	This holds details regarding the requestor. It may be repeated to also accommodate the delivery systems.
OTA_ProfileModifyRQ / POS / Source / RequestorID	1	An identifier of the entity making the request (e.g., ATA/IATA/ID number, Electronic Reservation Service Provider (ERSP), Association of British Travel Agents (ABTA)).
@Type	0..1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
OTA_ProfileModifyRQ / UniqueID	1	Identifies the profile to be modified together with the owner of the profile or an id provided by the client.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).

Element @Attribute	Num	Description/Contents
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
OTA_ProfileModifyRQ / ProfileModify	1	A full overlay of profile information containing the modified data.
@CreateDateTime	0..1	Time stamp of the creation.
@ShareAllOptOutInd	0..1	When yes, a customer has explicitly opted out of marketing communication. This is used in combination with the ShareAllMarketInd and only one of these attributes should have a value of yes.
@ShareAllSynchInd	0..1	Permission for sharing all data in profile for synchronization of profiles held by other travel service providers
@ShareAllMarketInd	0..1	Permission for sharing all data in profile for marketing purposes. A yes value indicates that the customer has chosen to opt-in to marketing communication. This is used in combination with the ShareAllOptOutInd and only one of these attributes should have a value of yes.
@LastModifyDateTime	0..1	Time stamp of the last modification.
OTA_ProfileModifyRQ / ProfileModify / Customer	0..1	Detailed customer information for this profile.
OTA_ProfileModifyRQ / ProfileModify / Customer / PersonName	0..5	Detailed name information for the customer.
@Language	1	The language code for which the name data is represented.
@DefaultInd	0..1	When true, indicates a default value should be used. At least one PersonName MUST be Primary.
@NameType	1	Former, Nickname, Alternate, etc.
OTA_ProfileModifyRQ / ProfileModify / Customer / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.

Element @Attribute	Num	Description/Contents
OTA_ProfileModifyRQ / ProfileModify / Customer / PersonName / GivenName	0..5	Given name, first name or names.
OTA_ProfileModifyRQ / ProfileModify / Customer / PersonName / MiddleName	0..3	The middle name of the person name.
OTA_ProfileModifyRQ / ProfileModify / Customer / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
OTA_ProfileModifyRQ / ProfileModify / Customer / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
OTA_ProfileModifyRQ / ProfileModify / Customer / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
OTA_ProfileModifyRQ / ProfileModify / Customer / Telephone	0..9	Information on a telephone number for the customer.
@Extension	0..1	Extension to reach a specific party at the phone number.
@PhoneLocationType	0..1	Describes the location of the phone, such as Home, Office, Property Reservation Office, etc. Refer to OpenTravel Code List Phone Location Type (PLT).
@PhoneTechType	0..1	Indicates type of technology associated with this telephone number, such as Voice, Data, Fax, Pager, Mobile, TTY, etc. Refer to OpenTravel Code List Phone Technology Type (PTT).
@PhoneNumber	1	Telephone number assigned to a single location.
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@CountryAccessCode	0..1	Code assigned by telecommunications authorities for international country access identifier.

Element @Attribute	Num	Description/Contents
@AreaCityCode	0..1	Code assigned for telephones in a specific region, city, or area.
OTA_ProfileModifyRQ / ProfileModify / Customer / Email	0..9	Email Address for the customer.
@EmailType	0..1	Defines the purpose of the e-mail address (e.g. personal, business, listserve). Refer to OpenTravel Code List Email Address Type (EAT).
@DefaultInd	0..1	When true, indicates a default value should be used.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
@TextFormat	0..1	HTML versus Plain Text.
OTA_ProfileModifyRQ / ProfileModify / Customer / Address	0..9	Detailed information on an address for the customer.
@Type	0..1	Defines the type of address (e.g. home, business, other). Refer to OpenTravel Code List Communication Location Type (CLT).
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@UseType	0..1	Describes the use of the address (e.g. mailing, delivery, billing, etc.). Refer to OpenTravel Code List Address Use Type (AUT).
@Language	1..1	The language code for which the address data is represented.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
OTA_ProfileModifyRQ / ProfileModify / Customer / Address / AddressLine	0..5	When the address is unformatted (FormattedInd="false") these lines will contain free form address details. When the address is formatted and street number and street name must be sent independently, the street number will be sent using StreetNmbr, and the street name will be sent in the first AddressLine occurrence.

Element @Attribute	Num	Description/Contents
OTA_ProfileModifyRQ / ProfileModify / Customer / Address / CityName	0..1	City (e.g., Dublin), town, or postal station (i.e., a postal service territory, often used in a military address).
OTA_ProfileModifyRQ / ProfileModify / Customer / Address / PostalCode	0..1	Post Office Code number.
OTA_ProfileModifyRQ / ProfileModify / Customer / Address / County	0..1	County or Region Name (e.g., Fairfax).
OTA_ProfileModifyRQ / ProfileModify / Customer / Address / StateProv	0..1	State or Province name (e.g., Texas).
@StateCode	0..1	The standard code or abbreviation for the state, province, or region.
OTA_ProfileModifyRQ / ProfileModify / Customer / Address / CountryName	0..1	Country name (e.g., Ireland).
@Code	0..1	ISO 3166 code for a country.
OTA_ProfileModifyRQ / ProfileModify / Customer / PaymentForm	0..1	Methods of providing funds and guarantees for travel by the customer.
OTA_ProfileModifyRQ / ProfileModify / Customer / PaymentForm / PaymentCard	0..1	Details of a credit card.
@CardNumber	0..1	Credit card number embossed on the card.
@MaskedCardNumber	0..1	May be used to send a concealed credit card number (e.g., xxxxxxxxxxxx9922).
@CardCode	0..1	The 2 character code of the credit card issuer.
@ExpireDate	0..1	Indicates the ending date.
@CardNumberIsProxy	0..1	Indicates the value of @CardNumber is a Data Proxy value representing an actual credit card number.
OTA_ProfileModifyRQ / ProfileModify / Customer / RelatedTraveler	0..9	Identifies a traveler associated with the customer.

Element @Attribute	Num	Description/Contents
@Relation	0..1	Indicates the type of relationship with the person in the profile, such as Spouse, Child, Family, Business Associate, Interest Group, Medical, Security, Other, etc.
OTA_ProfileModifyRQ / ProfileModify / Customer / RelatedTraveler / UniqueID	0..1	Identifies the profile of the related traveler.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
OTA_ProfileModifyRQ / ProfileModify / Customer / RelatedTraveler / PersonName	0..5	Detailed name information for the customer.
@Language	1	The language code for which the name data is represented.
@DefaultInd	0..1	When true, indicates a default value should be used. At least one PersonName MUST be Primary.
@NameType	1	Former, Nickname, Alternate, etc.
OTA_ProfileModifyRQ / ProfileModify / Customer / RelatedTraveler / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.
OTA_ProfileModifyRQ / ProfileModify / Customer / RelatedTraveler / PersonName / GivenName	0..5	Given name, first name or names.
OTA_ProfileModifyRQ / ProfileModify / Customer / RelatedTraveler / PersonName / MiddleName	0..3	The middle name of the person name.

Element @Attribute	Num	Description/Contents
OTA_ProfileModifyRQ / ProfileModify / Customer / RelatedTraveler / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
OTA_ProfileModifyRQ / ProfileModify / Customer / RelatedTraveler / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
OTA_ProfileModifyRQ / ProfileModify / Customer / RelatedTraveler / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson	0..1	Information on a contact person for the customer
@Relation	0..1	Indicates the type of relationship with the person in the profile, such as Spouse, Child, Family, Business Associate, Interest Group, Medical, Security, Other, etc.
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / PersonName	0..5	Detailed name information for the customer.
@NameType	1	Former, Nickname, Alternate, etc.
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / PersonName / GivenName	0..5	Given name, first name or names.
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / PersonName / MiddleName	0..3	The middle name of the person name.

Element @Attribute	Num	Description/Contents
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / Telephone	0..9	Information on a telephone number for the contact person of the customer.
@Extension	0..1	Extension to reach a specific party at the phone number.
@PhoneLocationType	0..1	Describes the location of the phone, such as Home, Office, Property Reservation Office, etc. Refer to OpenTravel Code List Phone Location Type (PLT).
@PhoneTechType	0..1	Indicates type of technology associated with this telephone number, such as Voice, Data, Fax, Pager, Mobile, TTY, etc. Refer to OpenTravel Code List Phone Technology Type (PTT).
@PhoneNumber	1	Telephone number assigned to a single location.
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@CountryAccessCode	0..1	Code assigned by telecommunications authorities for international country access identifier.
@AreaCityCode	0..1	Code assigned for telephones in a specific region, city, or area.

Element @Attribute	Num	Description/Contents
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / Email	0..9	Email Address for the contact person for the customer.
@EmailType	0..1	Defines the purpose of the e-mail address (e.g. personal, business, listserve). Refer to OpenTravel Code List Email Address Type (EAT).
@DefaultInd	0..1	When true, indicates a default value should be used.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
@TextFormat	0..1	HTML versus Plain Text.
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / Address	0..9	Detailed information on an address for the contact person for the customer.
@Type	0..1	Defines the type of address (e.g. home, business, other). Refer to OpenTravel Code List Communication Location Type (CLT).
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@UseType	0..1	Describes the use of the address (e.g. mailing, delivery, billing, etc.). Refer to OpenTravel Code List Address Use Type (AUT).
@Language	1..1	The language code for which the address data is represented.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / Address / AddressLine	0..5	When the address is unformatted (FormattedInd="false") these lines will contain free form address details. When the address is formatted and street number and street name must be sent independently, the street number will be sent using StreetNmbr, and the street name will be sent in the first AddressLine occurrence.

Element @Attribute	Num	Description/Contents
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / Address / CityName	0..1	City (e.g., Dublin), town, or postal station (i.e., a postal service territory, often used in a military address).
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / Address / PostalCode	0..1	Post Office Code number.
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / Address / County	0..1	County or Region Name (e.g., Fairfax).
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / Address / StateProv	0..1	State or Province name (e.g., Texas).
@StateCode	0..1	The standard code or abbreviation for the state, province, or region.
OTA_ProfileModifyRQ / ProfileModify / Customer / ContactPerson / Address / CountryName	0..1	Country name (e.g., Ireland).
@Code	0..1	ISO 3166 code for a country.
OTA_ProfileModifyRQ / ProfileModify / Customer / Document	0..9	Detailed document information for the customer (e.g., driver license, passport, visa).
@DocIssueCountry	0..1	Country where the document was issued.
@ExpireDate	0..1	Indicates the ending date.
@EffectiveDate	0..1	Indicates the starting date.
@BirthDate	0..1	Indicates the date of birth as indicated in the document, in ISO 8601 prescribed format.
@DocIssueLocation	0..1	Indicates the location where the document was issued.
@DocID	0..1	Unique number assigned by authorities to document.

Element @Attribute	Num	Description/Contents
@DocType	0..1	Indicates the type of document (e.g. Passport, Military ID, Drivers License, national ID, and Vaccination Certificate). Refer to OpenTravel Code List Document Type (DOC).
OTA_ProfileModifyRQ / ProfileModify / Customer / Document / DocHolderName	0..1	The name of the document holder in unformatted text (Mr. Sam Jones).
OTA_ProfileModifyRQ / ProfileModify / Customer / CustLoyalty	0..9	Loyalty program information for the customer.
@SignupDate	0..1	Indicates when the member signed up for the loyalty program.
@ExpireDate	0..1	Indicates the ending date.
@PrimaryLoyaltyIndicator	0..1	When true, indicates this is the primary customer loyalty program and when false, indicates this is not the primary customer loyalty program.
@EffectiveDate	0..1	Indicates the starting date.
@LoyalLevel	0..1	Indicates special privileges in program assigned to individual.
@TravelSector	0..1	Identifies the travel sector. Refer to OpenTravel Code List Travel Sector (TVS).
@MembershipID	0..1	Unique identifier of the member in the program (membership number, account number, etc.).
@VendorCode	0..1	Indicate the partner(s)/vendor(s) for which the customer loyalty number is valid.
@CustomerValue	0..1	The supplier's ranking of the customer (e.g., VIP, numerical ranking).
@ProgramID	0..1	Identifier to indicate the company owner of the loyalty program.
OTA_ProfileModifyRQ / ProfileModify / PrefCollections	0..1	A collection of preference collections.
OTA_ProfileModifyRQ / ProfileModify / PrefCollections / PrefCollection	1..n	Aggregation of customer travel needs.
OTA_ProfileModifyRQ / ProfileModify / PrefCollections / PrefCollection / HotelPref	0..n	A set of preferences for hotel stay.

Element @Attribute	Num	Description/Contents
OTA_ProfileModifyRQ / ProfileModify / PrefCollections / PrefCollection / HotelPref / TPA_Extensions	0..1	A placeholder in the schema to allow for additional elements and attributes to be included if required, per Trading Partner Agreement (TPA).
OTA_ProfileModifyRQ / ProfileModify / PrefCollections / PrefCollection / HotelPref / TPA_Extensions / TPA_Extension	1..n	An individual preference extension.
OTA_ProfileModifyRQ / ProfileModify / PrefCollections / PrefCollection / HotelPref / TPA_Extensions / TPA_Extension / Preferences	0..1	A collection of pThe division name or ID with which the contact is associated.rofile preferences.
OTA_ProfileModifyRQ / ProfileModify / PrefCollections / PrefCollection / HotelPref / TPA_Extensions / TPA_Extension / Preferences / Preference	1..n	An individual preference.
@HotelCode	0..1	Describes whether the line item refers to an individual Hotel property.
@ChainCode	0..1	Describes whether the line item refers to a Chain (e.g. Courtyard, Doubletree).
@BrandCode	0..1	Describes whether the line item refers to a Brand (e.g. Marriott, Hilton).
@IsGlobal	0..1	A boolean value indicating this preference applies to all hotels in the receiving system.
@Category	0..1	The summary group describing a set of preferences (Room).
@Type	1	The specific preference requested (Bed Type).
@Value	1	The value of the preference (King).
@Quantity	0..1	For those preferences for which a quantity is applicable, and not implicitly in the preference itself, this is used to describe the number of items accounted for in the preference.
OTA_ProfileModifyRQ / ProfileModify / Comments	0..1	A collection of comments

Element @Attribute	Num	Description/Contents
OTA_ProfileModifyRQ / ProfileModify / Comments / Comment	1..n	Comments related to the profile.
@Language	0..1	Identifies the language.
@CreateDateTime	0..1	Time stamp of the creation.
@Name	0..1	In many cases the description repeats, this will allow you to define the information that is being sent, typically used when multiple occurrences of ParagraphType are being sent.
@CreatorID	0..1	ID of creator. The creator could be a software system identifier or an identifier of an employee responsible for the creation.
@GuestViewable	0..1	When true, the comment may be shown to the consumer. When false, the comment may not be shown to the consumer.
@LastModifierID	0..1	Identifies the last software system or person to modify a record.
@LastModifyDateTime	0..1	Time stamp of last modification.
OTA_ProfileModifyRQ / ProfileModify / Comments / Comment / Text	1	Formatted text content.

4.3.2 Data Element Table – Response

Element @Attribute	Num	Description/Contents
OTA_ProfileModifyRS	1	Root element of the message.
@EchoToken	1	A reference for additional message identification, assigned by the requesting host system. When a request message includes an echo token, the corresponding response message MUST include an echo token with an identical value.
@TimeStamp	1	Indicates the creation date and time of the message in UTC using the following format specified by ISO 8601; YYYY-MM-DDThh:mm:ssZ with time values using the 24-hour clock (e.g., 20 November 2003, 1:59:38 pm UTC becomes 2003-11-20T13:59:38Z).

Element @Attribute	Num	Description/Contents
@Version	1	For all OpenTravel versioned messages, the version of the message is indicated by a decimal value.
@Target	0..1	Used to indicate whether the request is for the Test or Production system.
OTA_ProfileModifyRS / Success	0..1	The presence of the empty Success element explicitly indicates that the OpenTravel versioned message succeeded.
OTA_ProfileModifyRS / Warnings	0..1	Used in conjunction with the Success element to define one or more business errors.
OTA_ProfileModifyRS / Warnings / Warning	1..n	Used when a message has been successfully processed to report any warnings or business errors that occurred.
@Type	1	The Warning element MUST contain the Type attribute that uses a recommended set of values to indicate the warning type. The validating XSD can expect to accept values that it has NOT been explicitly coded for and process them by using Type = "Unknown". Refer to OpenTravel Code List Error Warning Type (EWT).
@Status	0..1	If present, recommended values are those enumerated in the OTA_ErrorRS, (NotProcessed Incomplete Complete Unknown) however, the data type is designated as string data, recognizing that trading partners may identify additional status conditions not included in the enumeration.
@ShortText	1	An abbreviated version of the error in textual format.
@Code	0..1	If present, this refers to a table of coded values exchanged between applications to identify errors or warnings. Refer to OpenTravel Code List Error Codes (ERR).
OTA_ProfileModifyRS / UniqueID	1..9	Used to convey the identity of the modified profile, the owner of the profile, or an id provided by the client.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).

Element @Attribute	Num	Description/Contents
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.

4.3.3 Global Sample Message – Request

```

4.4 Merge Profiles

4.4.1 Data Element Table – Request

Element @Attribute	Num	Description/Contents
OTA_ProfileMergeRQ	1	Root element of the message.
@EchoToken	1	A reference for additional message identification, assigned by the requesting host system. When a request message includes an echo token, the corresponding response message MUST include an echo token with an identical value.
@TimeStamp	1	Indicates the creation date and time of the message in UTC using the following format specified by ISO 8601; YYYY-MM-DDThh:mm:ssZ with time values using the 24-hour clock (e.g., 20 November 2003, 1:59:38 pm UTC becomes 2003-11-20T13:59:38Z).
@Version	1	For all OpenTravel versioned messages, the version of the message is indicated by a decimal value.
OTA_ProfileMergeRQ / UniqueID	1..9	Identifies the profile for which information is being merged from the profiles identified by the ObsoleteProfileID together with the owner of the profile or an id provided by the client.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
OTA_ProfileMergeRQ / ObsoleteProfileID	1..9	Identifies the profile for which information is being merged from the profiles identified by the ObsoleteProfileID together with the owner of the profile or an id provided by the client.

Element @Attribute	Num	Description/Contents
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
OTA_ProfileMergeRQ / Profile	1	Results of the merged profile.
@CreateDateTime	0..1	Time stamp of the creation.
@ShareAllOptOutInd	0..1	When yes, a customer has explicitly opted out of marketing communication. This is used in combination with the ShareAllMarketInd and only one of these attributes should have a value of yes.
@ShareAllSynchInd	0..1	Permission for sharing all data in profile for synchronization of profiles held by other travel service providers
@ShareAllMarketInd	0..1	Permission for sharing all data in profile for marketing purposes. A yes value indicates that the customer has chosen to opt-in to marketing communication. This is used in combination with the ShareAllOptOutInd and only one of these attributes should have a value of yes.
@LastModifyDateTime	0..1	Time stamp of the last modification.
OTA_ProfileMergeRQ / Profile / Customer	0..1	Detailed customer information for this profile.
OTA_ProfileMergeRQ / Profile / Customer / PersonName	0..5	Detailed name information for the customer.
@Language	1	The language code for which the name data is represented.
@DefaultInd	0..1	When true, indicates a default value should be used. At least one PersonName MUST be Primary.
@NameType	1	Former, Nickname, Alternate, etc.
OTA_ProfileMergeRQ / Profile / Customer / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.

Element @Attribute	Num	Description/Contents
OTA_ProfileMergeRQ / Profile / Customer / PersonName / GivenName	0..5	Given name, first name or names.
OTA_ProfileMergeRQ / Profile / Customer / PersonName / MiddleName	0..3	The middle name of the person name.
OTA_ProfileMergeRQ / Profile / Customer / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
OTA_ProfileMergeRQ / Profile / Customer / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
OTA_ProfileMergeRQ / Profile / Customer / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
OTA_ProfileMergeRQ / Profile / Customer / Telephone	0..9	Information on a telephone number for the customer.
@Extension	0..1	Extension to reach a specific party at the phone number.
@PhoneLocationType	0..1	Describes the location of the phone, such as Home, Office, Property Reservation Office, etc. Refer to OpenTravel Code List Phone Location Type (PLT).
@PhoneTechType	0..1	Indicates type of technology associated with this telephone number, such as Voice, Data, Fax, Pager, Mobile, TTY, etc. Refer to OpenTravel Code List Phone Technology Type (PTT).
@PhoneNumber	1	Telephone number assigned to a single location.
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@CountryAccessCode	0..1	Code assigned by telecommunications authorities for international country access identifier.

Element @Attribute	Num	Description/Contents
@AreaCityCode	0..1	Code assigned for telephones in a specific region, city, or area.
OTA_ProfileMergeRQ / Profile / Customer / Email	0..9	Email Address for the customer.
@EmailType	0..1	Defines the purpose of the e-mail address (e.g. personal, business, listserve). Refer to OpenTravel Code List Email Address Type (EAT).
@DefaultInd	0..1	When true, indicates a default value should be used.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
@TextFormat	0..1	HTML versus Plain Text.
OTA_ProfileMergeRQ / Profile / Customer / Address	0..9	Detailed information on an address for the customer.
@Type	0..1	Defines the type of address (e.g. home, business, other). Refer to OpenTravel Code List Communication Location Type (CLT).
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@UseType	0..1	Describes the use of the address (e.g. mailing, delivery, billing, etc.). Refer to OpenTravel Code List Address Use Type (AUT).
@Language	1..1	The language code for which the address data is represented.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
OTA_ProfileMergeRQ / Profile / Customer / Address / AddressLine	0..5	When the address is unformatted (FormattedInd="false") these lines will contain free form address details. When the address is formatted and street number and street name must be sent independently, the street number will be sent using StreetNmbr, and the street name will be sent in the first AddressLine occurrence.

Element @Attribute	Num	Description/Contents
OTA_ProfileMergeRQ / Profile / Customer / Address / CityName	0..1	City (e.g., Dublin), town, or postal station (i.e., a postal service territory, often used in a military address).
OTA_ProfileMergeRQ / Profile / Customer / Address / PostalCode	0..1	Post Office Code number.
OTA_ProfileMergeRQ / Profile / Customer / Address / County	0..1	County or Region Name (e.g., Fairfax).
OTA_ProfileMergeRQ / Profile / Customer / Address / StateProv	0..1	State or Province name (e.g., Texas).
@StateCode	0..1	The standard code or abbreviation for the state, province, or region.
OTA_ProfileMergeRQ / Profile / Customer / Address / CountryName	0..1	Country name (e.g., Ireland).
@Code	0..1	ISO 3166 code for a country.
OTA_ProfileMergeRQ / Profile / Customer / PaymentForm	0..1	Methods of providing funds and guarantees for travel by the customer.
OTA_ProfileMergeRQ / Profile / Customer / PaymentForm / PaymentCard	0..1	Details of a credit card.
@CardNumber	0..1	Credit card number embossed on the card.
@MaskedCardNumber	0..1	May be used to send a concealed credit card number (e.g., xxxxxxxxxxxxx9922).
@CardCode	0..1	The 2 character code of the credit card issuer.
@ExpireDate	0..1	Indicates the ending date.
@CardNumberIsProxy	0..1	Indicates the value of @CardNumber is a Data Proxy value representing an actual credit card number.
OTA_ProfileMergeRQ / Profile / Customer / RelatedTraveler	0..9	Identifies a traveler associated with the customer.
@Relation	0..1	Indicates the type of relationship with the person in the profile, such as Spouse, Child, Family, Business Associate, Interest Group, Medical, Security, Other, etc.

Element @Attribute	Num	Description/Contents
OTA_ProfileMergeRQ / Profile / Customer / RelatedTraveler / UniqueID	0..1	Identifies the profile of the related traveler.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
OTA_ProfileMergeRQ / Profile / Customer / RelatedTraveler / PersonName	0..5	Detailed name information for the customer.
@Language	1	The language code for which the name data is represented.
@DefaultInd	0..1	When true, indicates a default value should be used. At least one PersonName MUST be Primary.
@NameType	1	Former, Nickname, Alternate, etc.
OTA_ProfileMergeRQ / Profile / Customer / RelatedTraveler / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.
OTA_ProfileMergeRQ / Profile / Customer / RelatedTraveler / PersonName / GivenName	0..5	Given name, first name or names.
OTA_ProfileMergeRQ / Profile / Customer / RelatedTraveler / PersonName / MiddleName	0..3	The middle name of the person name.
OTA_ProfileMergeRQ / Profile / Customer / RelatedTraveler / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
OTA_ProfileMergeRQ / Profile / Customer / RelatedTraveler / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)

Element @Attribute	Num	Description/Contents
OTA_ProfileMergeRQ / Profile / Customer / RelatedTraveler / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson	0..1	Information on a contact person for the customer
@Relation	0..1	Indicates the type of relationship with the person in the profile, such as Spouse, Child, Family, Business Associate, Interest Group, Medical, Security, Other, etc.
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / PersonName	0..5	Detailed name information for the customer.
@NameType	1	Former, Nickname, Alternate, etc.
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / PersonName / NamePrefix	0..3	The Salutation for the name. This SHOULD be a value representing an individual (Mr., Mrs., Dr.) and not Mr. and Mrs.
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / PersonName / GivenName	0..5	Given name, first name or names.
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / PersonName / MiddleName	0..3	The middle name of the person name.
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / PersonName / NameSuffix	0..3	Hold various name suffixes and letters (e.g. Jr., Sr., III, Ret., Esq.)
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / PersonName / NameTitle	0..5	Degree or honors (e.g., Ph.D., M.D.)
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / Telephone	0..9	Information on a telephone number for the contact person of the customer.

Element @Attribute	Num	Description/Contents
@Extension	0..1	Extension to reach a specific party at the phone number.
@PhoneLocationType	0..1	Describes the location of the phone, such as Home, Office, Property Reservation Office, etc. Refer to OpenTravel Code List Phone Location Type (PLT).
@PhoneTechType	0..1	Indicates type of technology associated with this telephone number, such as Voice, Data, Fax, Pager, Mobile, TTY, etc. Refer to OpenTravel Code List Phone Technology Type (PTT).
@PhoneNumber	1	Telephone number assigned to a single location.
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@CountryAccessCode	0..1	Code assigned by telecommunications authorities for international country access identifier.
@AreaCityCode	0..1	Code assigned for telephones in a specific region, city, or area.
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / Email	0..9	Email Address for the contact person for the customer.
@EmailType	0..1	Defines the purpose of the e-mail address (e.g. personal, business, listserve). Refer to OpenTravel Code List Email Address Type (EAT).
@DefaultInd	0..1	When true, indicates a default value should be used.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
@TextFormat	0..1	HTML versus Plain Text.
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / Address	0..9	Detailed information on an address for the contact person for the customer.
@Type	0..1	Defines the type of address (e.g. home, business, other). Refer to OpenTravel Code List Communication Location Type (CLT).

Element @Attribute	Num	Description/Contents
@FormattedInd	0..1	Specifies if the associated data is formatted or not. When true, then it is formatted; when false, then not formatted.
@DefaultInd	0..1	When true, indicates a default value should be used.
@UseType	0..1	Describes the use of the address (e.g. mailing, delivery, billing, etc.). Refer to OpenTravel Code List Address Use Type (AUT).
@Language	1..1	The language code for which the address data is represented.
@IsMailable	0..1	Indicates if the address has been validated or not and if it has been successful or not.
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / Address / AddressLine	0..5	When the address is unformatted (FormattedInd="false") these lines will contain free form address details. When the address is formatted and street number and street name must be sent independently, the street number will be sent using StreetNmbr, and the street name will be sent in the first AddressLine occurrence.
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / Address / CityName	0..1	City (e.g., Dublin), town, or postal station (i.e., a postal service territory, often used in a military address).
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / Address / PostalCode	0..1	Post Office Code number.
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / Address / County	0..1	County or Region Name (e.g., Fairfax).
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / Address / StateProv	0..1	State or Province name (e.g., Texas).
@StateCode	0..1	The standard code or abbreviation for the state, province, or region.
OTA_ProfileMergeRQ / Profile / Customer / ContactPerson / Address / CountryName	0..1	Country name (e.g., Ireland).
@Code	0..1	ISO 3166 code for a country.

Element @Attribute	Num	Description/Contents
OTA_ProfileMergeRQ / Profile / Customer / Document	0..9	Detailed document information for the customer (e.g., driver license, passport, visa).
@DocIssueCountry	0..1	Country where the document was issued.
@ExpireDate	0..1	Indicates the ending date.
@EffectiveDate	0..1	Indicates the starting date.
@BirthDate	0..1	Indicates the date of birth as indicated in the document, in ISO 8601 prescribed format.
@DocIssueLocation	0..1	Indicates the location where the document was issued.
@DocID	0..1	Unique number assigned by authorities to document.
@DocType	0..1	Indicates the type of document (e.g. Passport, Military ID, Drivers License, national ID, and Vaccination Certificate). Refer to OpenTravel Code List Document Type (DOC).
OTA_ProfileMergeRQ / Profile / Customer / Document / DocHolderName	0..1	The name of the document holder in unformatted text (Mr. Sam Jones).
OTA_ProfileMergeRQ / Profile / Customer / CustLoyalty	0..9	Loyalty program information for the customer.
@SignupDate	0..1	Indicates when the member signed up for the loyalty program.
@ExpireDate	0..1	Indicates the ending date.
@PrimaryLoyaltyIndicator	0..1	When true, indicates this is the primary customer loyalty program and when false, indicates this is not the primary customer loyalty program.
@EffectiveDate	0..1	Indicates the starting date.
@LoyalLevel	0..1	Indicates special privileges in program assigned to individual.
@TravelSector	0..1	Identifies the travel sector. Refer to OpenTravel Code List Travel Sector (TVS).
@MembershipID	0..1	Unique identifier of the member in the program (membership number, account number, etc.).
@VendorCode	0..1	Indicate the partner(s)/vendor(s) for which the customer loyalty number is valid.

Element @Attribute	Num	Description/Contents
@CustomerValue	0..1	The supplier's ranking of the customer (e.g., VIP, numerical ranking).
@ProgramID	0..1	Identifier to indicate the company owner of the loyalty program.
OTA_ProfileMergeRQ / Profile / PrefCollections	0..1	A collection of preference collections.
OTA_ProfileMergeRQ / Profile / PrefCollections / PrefCollection	1..n	Aggregation of customer travel needs.
OTA_ProfileMergeRQ / Profile / PrefCollections / PrefCollection / HotelPref	0..n	A set of preferences for hotel stay.
OTA_ProfileMergeRQ / Profile / PrefCollections / PrefCollection / HotelPref / TPA_Extensions	0..1	A placeholder in the schema to allow for additional elements and attributes to be included if required, per Trading Partner Agreement (TPA).
OTA_ProfileMergeRQ / Profile / PrefCollections / PrefCollection / HotelPref / TPA_Extensions / TPA_Extension	1..n	An individual preference extension.
OTA_ProfileMergeRQ / Profile / PrefCollections / PrefCollection / HotelPref / TPA_Extensions / TPA_Extension / Preferences	0..1	A collection of profile preferences.
OTA_ProfileMergeRQ / Profile / PrefCollections / PrefCollection / HotelPref / TPA_Extensions / TPA_Extension / Preferences / Preference	1..n	An individual preference.
@HotelCode	0..1	Describes whether the line item refers to an individual Hotel property.
@ChainCode	0..1	Describes whether the line item refers to a Chain (e.g. Courtyard, Doubletree).
@BrandCode	0..1	Describes whether the line item refers to a Brand (e.g. Marriott, Hilton).
@IsGlobal	0..1	A boolean value indicating this preference applies to all hotels in the receiving system.
@Category	0..1	The summary group describing a set of preferences (Room).

Element @Attribute	Num	Description/Contents
@Type	1	The specific preference requested (Bed Type).
@Value	1	The value of the preference (King).
@Quantity	0..1	For those preferences for which a quantity is applicable, and not implicitly in the preference itself, this is used to describe the number of items accounted for in the preference.
OTA_ProfileMergeRQ / Profile / Comments	0..1	A collection of comments
OTA_ProfileMergeRQ / Profile / Comments / Comment	1..n	Comments related to the profile.
@Language	0..1	Identifies the language.
@CreateDateTime	0..1	Time stamp of the creation.
@Name	0..1	In many cases the description repeats, this will allow you to define the information that is being sent, typically used when multiple occurrences of ParagraphType are being sent.
@CreatorID	0..1	ID of creator. The creator could be a software system identifier or an identifier of an employee responsible for the creation.
@GuestViewable	0..1	When true, the comment may be shown to the consumer. When false, the comment may not be shown to the consumer.
@LastModifierID	0..1	Identifies the last software system or person to modify a record.
@LastModifyDateTime	0..1	Time stamp of last modification.
OTA_ProfileMergeRQ / Profile / Comments / Comment / Text	1	Formatted text content.

4.4.2 Data Element Table – Response

Element @Attribute	Num	Description/Contents
OTA_ProfileMergeRS	1	Root element of the message.
@EchoToken	1	A reference for additional message identification, assigned by the requesting host system. When a request message includes an echo token, the corresponding response message MUST include an echo token with an identical value.

Element @Attribute	Num	Description/Contents
@TimeStamp	1	Indicates the creation date and time of the message in UTC using the following format specified by ISO 8601; YYYY-MM-DDThh:mm:ssZ with time values using the 24-hour clock (e.g., 20 November 2003, 1:59:38 pm UTC becomes 2003-11-20T13:59:38Z).
@Version	1	For all OpenTravel versioned messages, the version of the message is indicated by a decimal value.
@Target	0..1	Used to indicate whether the request is for the Test or Production system.
OTA_ProfileMergeRS / Success	0..1	The presence of the empty Success element explicitly indicates that the OpenTravel versioned message succeeded.
OTA_ProfileMergeRS / Warnings	0..1	Used in conjunction with the Success element to define one or more business errors.
OTA_ProfileMergeRS / Warnings / Warning	1..n	Used when a message has been successfully processed to report any warnings or business errors that occurred.
@Type	1	The Warning element MUST contain the Type attribute that uses a recommended set of values to indicate the warning type. The validating XSD can expect to accept values that it has NOT been explicitly coded for and process them by using Type = "Unknown". Refer to OpenTravel Code List Error Warning Type (EWT).
@Status	0..1	If present, recommended values are those enumerated in the OTA_ErrorRS, (NotProcessed Incomplete Complete Unknown) however, the data type is designated as string data, recognizing that trading partners may identify additional status conditions not included in the enumeration.
@ShortText	1	An abbreviated version of the error in textual format.
@Code	0..1	If present, this refers to a table of coded values exchanged between applications to identify errors or warnings. Refer to OpenTravel Code List Error Codes (ERR).

Element @Attribute	Num	Description/Contents
OTA_ProfileMergeRS / UniqueID	1..9	Used to convey the identity of the merged profile, the owner of the profile, or an id provided by the client.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
OTA_ProfileMergeRS / ObsoleteProfileID	0..n	Contains the UniqueID of a profile that was merged.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.

4.5 Enroll Loyalty Member

4.5.1 Data Element Table – Request

Element @Attribute	Num	Description/Contents
HTNG_LoyaltyAccountCreateRQ	1	Root element of the message.
@EchoToken	1	A reference for additional message identification, assigned by the requesting host system. When a request message includes an echo token, the corresponding response message MUST include an echo token with an identical value.
@TimeStamp	1	Indicates the creation date and time of the message in UTC using the following format specified by ISO 8601; YYYY-MM-DDThh:mm:ssZ with time values using the 24-hour clock (e.g., 20 November 2003, 1:59:38 pm UTC becomes 2003-11-20T13:59:38Z).
@Version	1	For all OpenTravel versioned messages, the version of the message is indicated by a decimal value.

Element @Attribute	Num	Description/Contents
HTNG_LoyaltyAccountCreateRQ / UniqueID	1..9	Identifies the profile for which the new loyalty account is being created for.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
HTNG_LoyaltyAccountCreateRQ / AccountInfo	1	Loyalty account information, including member information, preferences, security and sub-account balances.
@EnrollmentType	0..1	Method in which enrollment occurs.
@EnrollMethod	0..1	Means by which the enrollment was initiated. Refer to OpenTravel Code List Enrollment Method (ENR).
HTNG_LoyaltyAccountCreateRQ / AccountInfo / CustLoyalty	0..1	Loyalty program information for the customer.
@MembershipID	0..1	Unique identifier of the member in the program (membership number, account number, etc.).
@ProgramID	0..1	Identifier to indicate the company owner of the loyalty program.
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo	0..1	Member information including name, contact information and employee information.
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo / PersonName	1	Detailed name information for the customer.
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo / PersonName / GivenName	0..5	Given name, first name or names.
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo / PersonName / MiddleName	0..3	The middle name of the person name.

Element @Attribute	Num	Description/Contents
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo / PersonName / SurName	0..1	Family name, last name. May also be used for full name if the sending system does not have the ability to separate a full name into its parts, e.g. the surname element may be used to pass the full name.
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo / Telephone	0..9	Information on a telephone number for the customer.
@PhoneNumber	1	Telephone number assigned to a single location.
@PhoneTechType	0..1	Indicates type of technology associated with this telephone number, such as Voice, Data, Fax, Pager, Mobile, TTY, etc. Refer to OpenTravel Code List Phone Technology Type (PTT).
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo / Address	0..1	Detailed information on an address for the customer.
@Type	0..1	Defines the type of address (e.g. home, business, other). Refer to OpenTravel Code List Communication Location Type (CLT).
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo / Address / AddressLine	1..5	These lines will contain free form address details.
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo / Address / CityName	0..1	City (e.g., Dublin), town, or postal station (i.e., a postal service territory, often used in a military address).
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo / Address / PostalCode	0..1	Post Office Code number.
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo / Address / StateProv	0..1	State or Province name (e.g., Texas).
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo / Address / CountryName	0..1	Country name (e.g., Ireland).
HTNG_LoyaltyAccountCreateRQ / AccountInfo / MemberInfo / Email	0..9	Email Address for the customer.

Element @Attribute	Num	Description/Contents
@EmailType	0..1	Defines the purpose of the e-mail address (e.g. personal, business, listserve). Refer to OpenTravel Code List Email Address Type (EAT).
HTNG_LoyaltyAccountCreateRQ / Location	0..1	The location code where the enrollment originated.
@LocationCode	0..1	A code used to identify a location.

4.5.2 Data Element Table – Response

Element @Attribute	Num	Description/Contents
OTA_LoyaltyAccountRS	1	Root element of the message.
@EchoToken	1	A reference for additional message identification, assigned by the requesting host system. When a request message includes an echo token, the corresponding response message MUST include an echo token with an identical value.
@TimeStamp	1	Indicates the creation date and time of the message in UTC using the following format specified by ISO 8601; YYYY-MM-DDThh:mm:ssZ with time values using the 24-hour clock (e.g., 20 November 2003, 1:59:38 pm UTC becomes 2003-11-20T13:59:38Z).
@Version	1	For all OpenTravel versioned messages, the version of the message is indicated by a decimal value.
@Target	0..1	Used to indicate whether the request is for the Test or Production system.
OTA_LoyaltyAccountRS / Success	0..1	The presence of the empty Success element explicitly indicates that the OpenTravel versioned message succeeded.
OTA_LoyaltyAccountRS / Warnings	0..1	Used in conjunction with the Success element to define one or more business errors.
OTA_LoyaltyAccountRS / Warnings / Warning	1..n	Used when a message has been successfully processed to report any warnings or business errors that occurred.

Element @Attribute	Num	Description/Contents
@Type	1	The Warning element MUST contain the Type attribute that uses a recommended set of values to indicate the warning type. The validating XSD can expect to accept values that it has NOT been explicitly coded for and process them by using Type = "Unknown". Refer to OpenTravel Code List Error Warning Type (EWT).
@Status	0..1	If present, recommended values are those enumerated in the OTA_ErrorRS, (NotProcessed Incomplete Complete Unknown) however, the data type is designated as string data, recognizing that trading partners may identify additional status conditions not included in the enumeration.
@ShortText	1	An abbreviated version of the error in textual format.
@Code	0..1	If present, this refers to a table of coded values exchanged between applications to identify errors or warnings. Refer to OpenTravel Code List Error Codes (ERR).
OTA_LoyaltyAccountRS / UniqueID	1..9	Used to convey profile identifier.
@Type	1	A reference to the type of object defined by the UniqueID element. Refer to OpenTravel Code List Unique ID Type (UIT).
@ID_Context	0..1	Used to identify the source of the identifier (e.g., IATA, ABTA).
@ID	1	A unique identifying value assigned by the creating system. The ID attribute may be used to reference a primary-key value within a database or in a particular implementation.
OTA_LoyaltyAccountRS / AccountInfo	0..1	Loyalty account information, including member information, preferences, security and sub-account balances.
@PointBalance	0..1	The point balance for a loyalty account.
@EnrollmentType	0..1	Method in which enrollment occurs.
@EnrollMethod	0..1	Means by which the enrollment was initiated. Refer to OpenTravel Code List Enrollment Method (ENR).

Element @Attribute	Num	Description/Contents
OTA_LoyaltyAccountRS / AccountInfo / CustLoyalty	0..1	Loyalty program information for the customer.
@MembershipID	1	Unique identifier of the member in the program (membership number, account number, etc.).

5 Appendices

5.1 Glossary of Terms

For the purpose of this document the following terms have been defined as follows:

Term	Definition
Customer	Someone purchasing product(s) and/or service(s) from a Hotel.
Query Parameters	Examples of potential query parameters include name, email, postal code, phone number, account number.

5.2 Implementation Notes

5.2.1 Use of Names

The Customer Profile Workgroup believes the operator and trading partners should decide the rules surrounding the population of the GivenName and SurName fields. While these generally will be provided, the schema does not force them to be populated, nor does this specification; it is implementation-specific.

5.2.2 Use of Default Indicators

The default indicator is resident in those collections of records where one record must be treated as the default or primary record. This is true for telephone numbers, addresses, etc. In no case should more than one record contain a true value. Unless otherwise noted (by the default indicator being set to true), the first item is the default.

5.2.2.1 Example

```
<Telephone PhoneLocationType="6" PhoneTechType="5" PhoneNumber="123-4567" DefaultInd="true"
AreaCityCode="802"/>
<Telephone PhoneLocationType="7" PhoneTechType="1" PhoneNumber="303-5560" DefaultInd="false"
AreaCityCode="847"/>
<Telephone PhoneLocationType="7" PhoneTechType="3" PhoneNumber="303-5561" DefaultInd="false"
AreaCityCode="847"/>
```

5.2.3 Event Publishing and Subscribing

HTNG has created a mechanism for systems to be able to register their interest in receiving event notifications from other systems. The [HTNG Event Notification Specification](#) describes the following interactions:

- Obtaining a listing of events for which a subscription can be established.
- Registering (and unregistering) interest in receiving event notifications.
- Event-driven payload delivery.

5.2.4 Use of RequestedComponents

The Read Profile request supports a flexible model for obtaining customer profile information. Each profile component (Name, Address, Email, etc.) has an associated identifier/code that is used to indicate what parts of the profile are to be returned. The schema itself will dictate

which request elements are required, as well as size constraints that are enforced by the schema itself. There is also the potential for implementers to perform validation of the Read Profile process to ensure that appropriate values have been provided.

The schema allows the consumer to request single or multiple components of data. Not all consumers can request all of the components. The provider will determine which component requests will be accepted.

5.2.5 Use of Classifications

The Read Profile request supports a flexible model for integrated applications to share classifications or categories assigned to a customer profile. Hoteliers assign classifications to profiles to identify to hotel staff guests who should receive a specific service. When classifications are implemented, the Provider role is the system of record for assigning the classification to the profile. Integration partners may need to communicate with each other regarding what each classification valued pair means since a lookup reference list of valid classifications is not included in the XML schema.

5.3 Referenced Documents

The following table shows the documents upon which this document depends:

Document Title	Location/URL
