

## Property Web Services Specifications

### Release 2008B Issue 2

Issue 2 includes an addendum to Single Guest Itinerary (Part 2), and a minor update to the 'About HTNG' section.

**May 27, 2010**

HTNG gratefully acknowledges significant contributions of pre-existing work by the following companies, in support of specific portions of these specifications.

**Property Web Services Workgroup**

## About HTNG

Hotel Technology Next Generation ("HTNG") is a nonprofit organization with global scope, formed in 2002 to facilitate the development of next-generation, customer-centric technologies to better meet the needs of the global hotel community. HTNG's mission is to provide leadership that will facilitate the creation of one (or more) industry solution set(s) for the lodging industry that:

- Are modeled around the customer and allow for a rich definition and distribution of hotel products, beyond simply sleeping rooms;
- Comprise best-of-breed software components from existing vendors, and enable vendors to collaboratively produce world-class software products encompassing all major areas of technology spending: hotel operations, telecommunications, in-room entertainment, customer information systems, and electronic distribution;
- Properly exploit and leverage a base system architecture that provides integration and interoperability through messaging; and that provides security, redundancy, and high availability;
- Target the needs of hotel companies up to several hundred properties, that are too small to solve the issues themselves;
- Will reduce technology management cost and complexity while improving reliability and scalability; and
- Can be deployed globally, managed remotely, and outsourced to service providers where needed.

In June 2005, HTNG announced the first-ever "Branding and Certification Program" for hotel technology. This program will enable vendors to certify their products against open HTNG specifications, and to use the "HTNG Certified" logo in their advertising and collateral materials.

It will enable hotels to determine which vendors have completed certification of their products against which specific capabilities, and the environments in which performance is certified. HTNG's vision is to achieve a flexible technical environment that will allow multiple vendors' systems to interoperate and that will facilitate vendor alliances and the consolidation of applications, in order to provide hotels with easily managed, continually evolving, cost-effective solutions to meet their complete technology needs on a global basis.

Paragraph added on 27 May 2010:

Manufacturers and software providers shall not claim compliance with portions of the requirements of any HTNG specification or standard, and shall not use the HTNG name or the name of the specification or standard in any statements about their respective product(s) unless the product(s) is (are) certified as compliant to the specification or standard.

THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT. IN NO EVENT SHALL THE AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES, OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF, OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

Permission is granted for implementers to use the names, labels, etc. contained within the specification. The intent of publication of the specification is to encourage implementations of the specification.

This specification has not been verified for avoidance of possible third-party proprietary rights. In implementing this specification, usual procedures to ensure the respect of possible third-party intellectual property rights should be followed.

The names Hotel Technology Next Generation and HTNG, and logos depicting these names, are trademarks of Hotel Technology Next Generation. Permission is granted for implementers to use the aforementioned names in technical documentation for the purpose of acknowledging the copyright and including the notice required above. All other use of the aforementioned names and logos requires the permission of Hotel Technology Next Generation, either in written form or as explicitly permitted for the organizations members through the current terms and conditions of membership.

#### Document History

Issue 1	November 24, 2008	Initial Release
Issue 2	May 27, 2010	Updated 'About HTNG' Section, added Addendum to the Single Guest Itinerary Specification

## Table of Contents

CHAPTER 1	<b>INTRODUCTION.....</b>	<b>14</b>
PART 1:	<b>WEB SERVICES FRAMEWORK, VERSION 2.1.1.....</b>	<b>15</b>
CHAPTER 2	<b>DOCUMENT INFORMATION (PART 1).....</b>	<b>16</b>
2.1	Change History.....	16
2.2	Contributors.....	16
2.3	Referenced Documents.....	17
CHAPTER 3	<b>OVERVIEW.....</b>	<b>18</b>
3.1	Framework 2.1.....	18
3.2	WS Addressing .....	18
3.3	HTTP Communication Patterns.....	19
CHAPTER 4	<b>THE SYNCHRONOUS COMMUNICATION PROCESS .....</b>	<b>20</b>
4.1	SYNC1.....	21
4.1.1	Sync – Sample Message with HTTP Header .....	21
4.2	SYNC2.....	21
4.2.1	Sync – Sample Message with HTTP Response Header .....	21
4.2.2	Sync – Sample Fault with HTTP Response Header .....	22
CHAPTER 5	<b>THE ASYNCHRONOUS COMMUNICATION PROCESS .....</b>	<b>23</b>
5.1	ASYNC1.....	23
5.2	ASYNC2.....	23
5.3	ASYNC3.....	24
5.4	ASYNC4.....	24
5.5	Asynchronous Fault Handling .....	25
5.6	Asynchronous WSDL Structure .....	26
5.7	Asynchronous WSDL Example .....	26
5.8	Simple HTNG Framework 2.1 Asynchronous Sample.....	26
CHAPTER 6	<b>ENSURING CONSISTENT BEHAVIOR(S) THROUGH STANDARDIZED APPROACHES.....</b>	<b>28</b>
6.1	Overall Fault Handling .....	28
6.2	HTTP as Recommended Transport.....	28
6.3	WSDL Construction and Change Management .....	28
6.3.1	Recommendations for Change Management for Documents and Specifications Involving Web Services.....	28
6.3.2	Release Process.....	29
6.3.3	Change Management.....	30
6.3.4	Extensibility .....	30
6.3.5	For Writers of a Specification.....	30
6.3.6	For Implementors of a Published Specification.....	31
6.3.7	Suggested Workgroup Acronymns .....	32
6.3.8	Guidelines for Composing WSDL and XML Schemas.....	32
6.4	Security (if in use) .....	33
6.4.1	Security XML Example.....	33
6.5	Routing .....	34
6.6	Reliability .....	34
6.7	Handling Attachments .....	34
APPENDIX A	<b>SOAP FAULT HANDLING.....</b>	<b>35</b>

A.1.	Declarative Approach .....	35
<b>APPENDIX B</b>	<b>SOAP EXCEPTION HANDLING .....</b>	<b>39</b>
<b>APPENDIX C</b>	<b>MATH(A+B) SAMPLE PROJECT .....</b>	<b>41</b>
<b>APPENDIX D</b>	<b>PAYMENT POSTING EXAMPLE .....</b>	<b>42</b>
<b>APPENDIX E</b>	<b>ADDITIONAL EXAMPLES .....</b>	<b>43</b>
<b>PART 2:</b>	<b>SINGLE GUEST ITINERARY, VERSION 2.2.1 .....</b>	<b>44</b>
<b>CHAPTER 7</b>	<b>DOCUMENT INFORMATION (PART 2) .....</b>	<b>45</b>
7.1	Change History.....	45
7.2	Contributors.....	45
<b>CHAPTER 8</b>	<b>ACTIVITY SERVICE .....</b>	<b>46</b>
8.1	Supporting Schemas .....	46
8.2	Soap Header .....	46
8.2.1	Sample Header Message.....	47
<b>CHAPTER 9</b>	<b>ACTIVITY PORT TYPE .....</b>	<b>48</b>
9.1	Activity Lookup.....	48
9.1.1	ActivityLookupRequest .....	49
9.1.2	ActivityLookupResponse .....	51
9.1.3	Sample Messages .....	53
9.2	Create Activity .....	57
9.2.1	ActivityRequest .....	58
9.2.2	ActivityResponse .....	60
9.2.3	Sample Messages .....	61
9.3	Update Activity.....	64
9.3.1	Sample Messages .....	64
9.4	Cancel Activity .....	66
9.4.1	Sample Messages .....	67
<b>CHAPTER 10</b>	<b>ACTIVITY PROVIDER PORT TYPE .....</b>	<b>70</b>
10.1	Out of Scope Notification .....	70
10.1.1	OutOfScopeNotificationRequest .....	71
10.1.2	OutOfScopeNotificationResponse .....	72
10.1.3	Sample Messages .....	73
10.2	Fetch Activities .....	74
10.2.1	FetchActivitiesRequest .....	75
10.2.2	FetchActivitiesResponse.....	77
10.2.3	Sample Messages .....	78
<b>CHAPTER 11</b>	<b>ACTIVITY SYNC PORT TYPE .....</b>	<b>82</b>
11.1	Location Notification.....	82
11.1.1	LocationNotificationRequest .....	83
11.1.2	LocationNotificationResponse .....	85
11.1.3	Sample Messages .....	85
<b>CHAPTER 12</b>	<b>NAME PORT TYPE.....</b>	<b>88</b>
12.1	Fetch Profile .....	88
12.1.1	FetchProfileRequest .....	89
12.1.2	FetchProfileResponse .....	90
12.1.3	Sample Messages .....	91

12.2	New Profile .....	93
12.2.1	NewProfileRequest .....	94
12.2.2	NewProfileResponse .....	95
12.2.3	Sample Messages .....	95
12.3	Update Profile .....	97
12.3.1	UpdateProfileRequest .....	98
12.3.2	UpdateProfileResponse .....	99
12.3.3	Sample Messages .....	99
12.4	Profile Lookup .....	102
12.4.1	LookupRequest .....	102
12.4.2	LookupResponse .....	104
12.4.3	Sample Messages .....	105
12.5	Subscription .....	109
12.5.1	SubscriptionRequest .....	110
12.5.2	SubscriptionResponse .....	111
12.5.3	Sample Messages .....	111
12.6	Merge Profile .....	113
12.6.1	MergeProfileRequest .....	113
12.6.2	MergeProfileResponse .....	114
12.6.3	Sample Messages .....	114
<b>CHAPTER 13</b>	<b>RESERVATION PROVIDER PORT TYPE</b> .....	<b>117</b>
13.1	Reservation Lookup .....	117
13.1.1	ReservationLookupRequest .....	118
13.1.2	ReservationLookupResponse .....	120
13.1.3	Sample Messages .....	122
13.2	Fetch Reservation .....	124
13.2.1	FetchReservationRequest .....	125
13.2.2	FetchReservationResponse .....	126
13.2.3	Sample Messages .....	129
13.3	Post Payment .....	131
13.3.1	PostPaymentRequest .....	132
13.3.2	PostPaymentResponse .....	138
13.3.3	Sample Messages .....	139
13.4	Guest Message .....	141
13.4.1	GuestMessageRequest .....	142
13.4.2	GuestMessageResponse .....	143
13.4.3	Sample Messages .....	143
<b>CHAPTER 14</b>	<b>RESERVATION SYNC PORT TYPE</b> .....	<b>146</b>
14.1	Guest Status Notification .....	146
14.1.1	GuestStatusNotificationRequest .....	146
14.1.2	GuestStatusNotification .....	147
14.1.3	GuestStatusNotificationResponse .....	147
14.1.4	Sample Messages .....	148
14.2	Fetch Check Details .....	150
14.2.1	FetchCheckDetailsRequest .....	150
14.2.2	FetchCheckDetailsResponse .....	151
14.2.3	Sample Messages .....	153
14.3	Activity Schema Elements (Activity.xsd) .....	155
14.3.1	ActivityList .....	155

14.3.2	Activity .....	156

## Acknowledgements

Many companies and individuals contributed significant time and effort to the development of these specifications. However, their work was greatly facilitated by the willingness of a few companies to contribute existing specifications as a starting point.

HTNG gratefully acknowledges significant contributions of pre-existing work by the following companies, in support of specific portions of these specifications:

- MICROS Systems, Inc.
- PAR Springer-Miller Systems
- Newmarket International
- TAC GmbH (Reservation Assistant)

## Chapter 1 Introduction

This document is Release 2008B of the HTNG Property Web Services Specifications.

For convenience, these are presented as a single multi-part document, with each part comprising a different specification.

The 2008B Release comprises the following parts:

1. Web Services Framework, Version 2.1.1
2. Single Guest Itinerary, Version 2.2.1
3. Digital Signage, Version 1.0
4. Open Data Exchange, Version 1.4.1
5. Back Office Integration, Version 1.4
6. Guest Self Service, Version 1.0.1
7. Food and Beverage Ordering, Version 1.0

Part 5 - Back Office Integration 1.0 - is not yet included in the Certification Program, but it is expected that it will be included in a future release of the Certification Program. **Note: This specification may change prior to inclusion in a future release of the Certification Program.**

Note: Single Guest Itinerary Version 2.2.1, posted on 27 May 2010, includes an addendum which defines the roles and use cases for the specification, and which was inadvertently omitted from the original document. The addendum is posted as an additional document on the Open Group site, where Property Web Services is posted.

Note: Digital Signage 1.0 is unchanged from the version published in HTNG Property Web Services Version 2007A Issue 3.

*Part 1: Web Services Framework, Version 2.1.1*

## Chapter 2 Document Information (Part 1)

### 2.1 Change History

Version	Date	Summary of Changes	People/Companies Involved
2.1.1	May '08 – August '08	Minor updates to the specification	Sophie Grigg, PAR Springer-Miller Systems
		Various small edits	Tom Gresham, MICROS Systems, Inc.
		Update to Change Management (Chapter 6)	Brian Alessi, Delaware North
		Re-work of Chapter structures	Haken Lindestaf, OpenCourse Solutions
			Rod Tate, Symon MessageLink

### 2.2 Contributors

A key group of technologists from across the industry were formed into a workgroup to revise the methodology for system interconnection via Web Services.

The initial group involved in preparing this specification included the following people representing the following companies:

Name	Company Represented
Kristofer Agren	OpenCourse Solutions
Sophie Grigg	PAR Springer-Miller Systems
Alex Lobakov	PAR Springer-Miller Systems
Alex Shore	Newmarket International
Tom Gresham	MICROS Systems, Inc.
Andreas Hagedorn	Trust International
Brad More	Theodatus
Mark Pullen	InfoGenesis

Doug Rice	HTNG
-----------	------

The group met together during 2006 and 2007 to prepare this specification material. During Hitec (June 2006) various vendors were able to demonstrate the use of the new Framework 2.1 methodology to interface systems for various HTNG initiatives. In addition, a number of workgroups have either used this Framework as their connectivity mechanism or plan to do so.

### 2.3 Referenced Documents

The following table shows the documents upon which this document depends:

Name	Location
SOAP 1.1	
SOAP 1.2	
Web Services Addressing 1.0, Core W3C Working Draft: 2006-05-09	<a href="http://www.w3.org/TR/2006/REC-ws-addr-core-20060509">www.w3.org/TR/2006/REC-ws-addr-core-20060509</a>

## Chapter 3 Overview

### 3.1 Framework 2.1

This specification describes the Framework 2.1 methodology. It remains a working document that receives updates on a regular basis.

This specification outlines a set of existing open standards, patterns, and practices that have gained significant acceptance throughout the IT industry that must be supported by an implementer to claim HTNG Framework 2.1 compliance. The framework prescribes a service-oriented architecture implemented using Web Services.

An HTNG Framework 2.1-compliant Web Service MUST adhere to the following:

1. Support both SOAP 1.1 and SOAP 1.2
2. Be expressed fully in WSDL and XML Schema
3. Support WS-Addressing (Web Services Addressing 1.0 – Core: 2006-05-09 ([www.w3.org/TR/2006/REC-ws-addr-core-20060509](http://www.w3.org/TR/2006/REC-ws-addr-core-20060509))
4. Be accessible using synchronous and/or asynchronous HTTP as described below
5. There is an assumption that you are processing XML messages correctly utilizing best practices and known conventions

The following is RECOMMENDED:

1. Usage of WS-Security to authenticate messages and secure message content (Only the WS-Security 1.0 specification is supported within the context of this specification.)
2. Usage of asynchronous HTTP as described below
3. Usage of SOAP faults as described below
4. Usage of the XML Schema and WSDL construction best practices as described below
5. Vendors conform with v1.1 of the WS-I Basic Profile specification ([www.ws-i.org/Profiles/BasicProfile-1.1.html](http://www.ws-i.org/Profiles/BasicProfile-1.1.html))

### 3.2 WS Addressing

The group reviewed many of the specifications in place and in use across many industries. It was felt that the use of existing standards was the optimal way to create the most effective communication standard. This documentation uses the standards described in the Web Services section of [www.w3.org](http://www.w3.org).

The group decided that guidelines defined within Web Services Addressing were appropriate for Framework 2.1. The W3C Recommendation of May 2006 (2006-05-09 – [www.w3.org/TR/2006/REC-ws-addr-core-20060509](http://www.w3.org/TR/2006/REC-ws-addr-core-20060509)) was chosen as the WS-Addressing version to use because it provided a platform that was well supported by many of the common software platforms the members were using to develop their software.

Synchronous and Asynchronous communications are in use actively by many HTNG members using the existing HTNG header. Framework 2.1 provides support for both communication patterns. In addition, we have provided guidelines that should make the communication process more robust and standardized.

### 3.3 HTTP Communication Patterns

The synchronous pattern, whilst straightforward, is included here for reference and to aid in communicating a best practice approach. As different web service frameworks handle asynchronous communication differently, the approach described in the "Async pattern" section is recommended. Whilst an implementer may choose to support other async patterns, if a product is claiming Async compliance (which may or may not be required for a particular technical specification), then at the very least this async pattern must be supported.

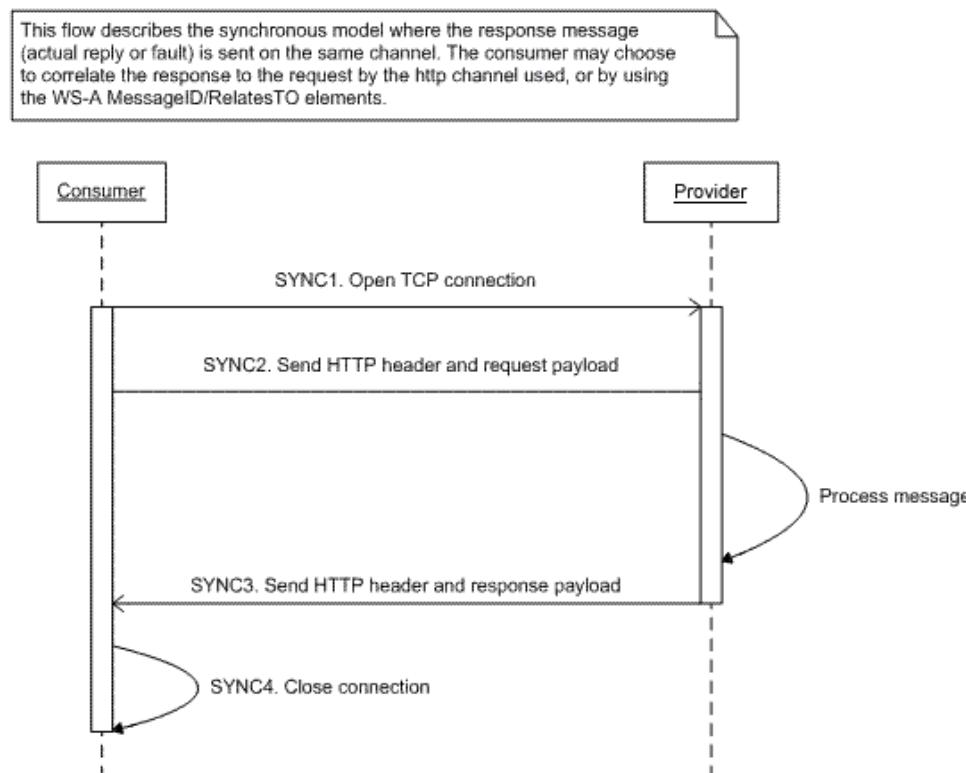

The full details of Asynchronous communication and the associated fault handling is detailed within this specification along with some sample applications that demonstrate an implementation. Synchronous communications are defined in Chapter 4. Asynchronous communications are defined in Chapter 5.

## Chapter 4 The Synchronous Communication Process

Synchronous communication is defined as a request/response over the same channel. The overall principals in this communication are defined as follows:

- Each message will supply a unique MessageID. Should the same message be transmitted with a different MessageID (many organizations utilize a GUID for this purpose), this will be treated as a separate message by the recipient.
- If reply to element contains the anonymous URI, then the response will be provided on the same channel; by definition this becomes a Synchronous transaction. See [www.w3.org/TR/2006/REC-ws-addr-core-20060509](http://www.w3.org/TR/2006/REC-ws-addr-core-20060509) (Section 3, Message Addressing Properties).

Diagrammatically this can be represented via the following sequence diagram.

**NOTE:** Examples provided in the specification are from the original [Framework 2.0 specification, 1.0.8](#); as such the soap Envelope references the 2004-08 namespace. This has been maintained in the example(s) for backward compatibility.

## 4.1 SYNC1

The caller sends the request message, and indicates that the response should be sent on the same connection by supplying the WS-Addressing “anonymous” URI in the wsa:ReplyTo element. Note that if the anonymous URI is used and there is both a wsa:ReplyTo and wsa:FaultTo element, both wsa:ReplyTo and wsa:FaultTo elements MUST use the anonymous URI; i.e., it is not possible to use the anonymous URI for wsa:ReplyTo but not wsa:FaultTo, or vice versa.

### 4.1.1 Sync – Sample Message with HTTP Header

```
POST /MyService.asmx HTTP/1.1
Content-Type: text/xml; charset="utf-8"
Content-Length: nnnn
Connection: close
SOAPAction: http://xyz/MyService/SayHello

(01) <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
    xmlns:wsa="http://schemas.xmlsoap.org/ws/2004/08/addressing";>
(02)     <soap:Header>
(03)         <wsa:MessageID>uuid:214A50B2-E62E-4f8b-BD97-62ABE31E15C2</wsa:MessageID>
(04)         <wsa:ReplyTo>
(05)             <wsa:Address>http://schemas.xmlsoap.org/ws/2004/08/addressing/role/anonymous</wsa:Address>
(06)         </wsa:ReplyTo>
(07)         <wsa:To>http://xyz/MyService</wsa:To>
(08)         <wsa:Action>http://xyz/MyService/SayHello</wsa:Action>
(09)     </soap:Header>
(10)     <soap:Body>
(11)         <m:SayHello xmlns:m="http://xyz/MyService">
(12)             <m:MyName>John Doe</m:MyName>
(13)         </m:SayHello>
(14)     </soap:Body>
(15) </soap:Envelope>
```

## 4.2 SYNC2

The Web Service sends back the response on the same connection on which the request came in.

### 4.2.1 Sync – Sample Message with HTTP Response Header

```
POST /MyService.asmx HTTP/1.1
Content-Type: text/xml; charset="utf-8"
Content-Length: nnnn
Connection: close
SOAPAction: http://xyz/MyService/SayHello

(01) <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"
    xmlns:wsa="http://schemas.xmlsoap.org/ws/2004/08/addressing";>
(02)     <soap:Header>
(03)         <wsa:MessageID>uuid:214A50B2-E62E-4f8b-BD97-62ABE31E15C2</wsa:MessageID>
(04)         <wsa:ReplyTo>
(05)             <wsa:Address>http://schemas.xmlsoap.org/ws/2004/08/addressing/role/anonymous</wsa:Address>
```

```
(06)      </wsa:ReplyTo>
(07)      <wsa:To>http://xyz/MyService</wsa:To>
(08)      <wsa:Action>http://xyz/MyService/SayHello</wsa:Action>
(09)    </soap:Header>
(10)    <soap:Body>
(11)      <m:SayHello xmlns:m="http://xyz/MyService">
(12)        <m:MyName>John Doe</m:MyName>
(13)      </m:SayHello>
(14)    </soap:Body>
(15) </soap:Envelope>
```

#### 4.2.2 Sync – Sample Fault with HTTP Response Header

HTTP/1.1 200 OK  
Date: Wed, 10 May 2006 11:30:07 GMT  
Content-Length: nnnn  
Content-Type: text/xml; charset="utf-8"

```
(01) <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" 
  xmlns:wsa="http://schemas.xmlsoap.org/ws/2004/08/addressing">

(02)   <soap:Header>
(03)     <wsa:MessageID>uuid:AF6F10EE-B2A8-4080-BEA0-0A5F03100C60</wsa:MessageID>
(04)     <wsa:RelatesTo>uuid:214A50B2-E62E-4f8b-BD97-62ABE31E15C2</wsa:RelatesTo>
(05)     <wsa:To>http://abc:1234/MyClient</wsa:To>
(06)     <wsa:Action>http://www.w3.org/2005/08/addressing/fault</wsa:Action>
(07)   </soap:Header>
(08)   <soap:Body>
(09)     <soap:Fault xmlns:m="http://xyz/MyService">
(10)       <faultcode>m:MyNameNotSet </faultcode>
(11)       <faultstring>No name was specified, unable to say hello</faultstring>
(12)       <detail>
(13)         <m:MyNameNotSet>
(14)           <m:SomeElement>Some additional information</m:SomeElement>
(15)         </m:MyNameNotSet>
(16)       </detail>
(17)     </soap:Fault>
(18)   </soap:Body>
(19) </soap:Envelope>
```

## Chapter 5 The Asynchronous Communication Process

Asynchronous behavior is accomplished by implementing three “normal” web service methods: one on the service side that gets called by the consumer to start the asynchronous process (the method should have the \_SubmitRequest suffix), and two methods that are implemented by the consumer to receive the result (suffixed \_SubmitResult) or a fault (\_SubmitFault).

### 5.1 ASYNC1

The response/reply message in each message exchange (the \_SubmitRequest message exchange and \_SubmitResult/\_SubmitFault message exchange) is treated like normal and is correlated using WS-Addressing. In the sample, a UUID was used for CorrelationID.

```
(01) <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:wsa="http://schemas.xmlsoap.org/ws/2004/08/addressing"  
    xmlns:htng="urn:tobedetermined">  
(02)   <soap:Header>  
(03)     <wsa:MessageID>uuid:214A50B2-E62E-4f8b-BD97-62ABE31E15C2</wsa:MessageID>  
(04)     <wsa:ReplyTo>  
(05)       <wsa:Address>http://schemas.xmlsoap.org/ws/2004/08/addressing/role/anonymous</wsa:Address>  
(06)     </wsa:ReplyTo>  
(07)     <wsa:To>http://htng.org/abcspec</wsa:To>  
(08)     <wsa:Action>http://htng.org/abcspec/XYZ_SubmitRequest</wsa:Action>  
(09)     <htng:CorrelationID>uuid:2D11751F-916F-4c1f-B1FD-9D6D051AC90A</htng:CorrelationID>  
(10)     <htng:ReplyTo>  
(11)       <wsa:Address>http://abc:1234/MyClientAsync</wsa:Address>  
(12)     </htng:ReplyTo>  
(13)     <htng:FaultTo>  
(14)       <wsa:Address>http://abc:1234/MyClientAsync</wsa:Address>  
(15)     </htng:FaultTo>  
(16)   </soap:Header>  
(17)   <soap:Body>  
(18)     <m:XYZ_SubmitRequest xmlns:m="http http://htng.org/abcspec">  
(19)       ... The request ...  
(20)     </m:XYZ_SubmitRequest>  
(21)   </soap:Body>  
(22) </soap:Envelope>
```

### 5.2 ASYNC2

The provider receives the message, initiates the asynchronous process, and sends back an “empty” SOAP message.

```
(01) <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:wsa="http://schemas.xmlsoap.org/ws/2004/08/addressing" >  
(02)   <soap:Header>  
(03)     <wsa:MessageID>uuid:9971BF72-F42D-49ee-99DB-BEC28B6EDAF7</wsa:MessageID>  
(04)     <wsa:RelatesTo>uuid:214A50B2-E62E-4f8b-BD97-62ABE31E15C2</wsa:RelatesTo>  
(05)     <wsa:To>http://schemas.xmlsoap.org/ws/2004/08/addressing/role/anonymous</wsa:To>  
(06)     <wsa:Action>http://htng.org/abcspec/XYZ_SubmitRequestResponse</wsa:Action>  
(07)   </soap:Header>  
(08)   <soap:Body/>
```

(09) </soap:Envelope>

### 5.3 ASYNC3

The provider completes the asynchronous process, and invokes the \_SubmitResult method on the consumer (the address was specified by the htng:ReplyTo element in the original \_SubmitRequest method).

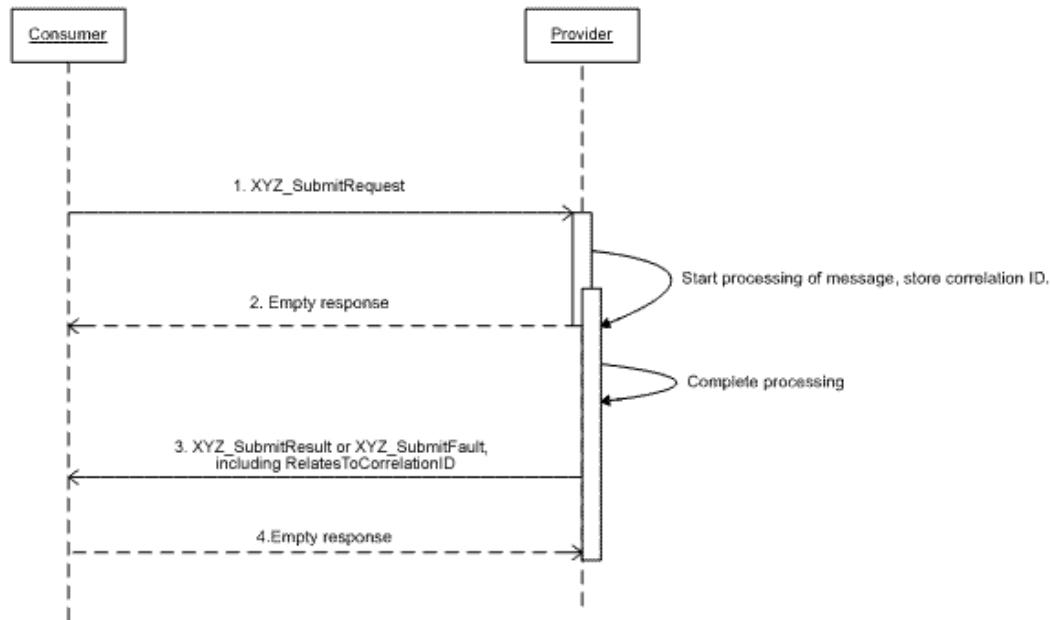

```
(01) <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:wsa="http://schemas.xmlsoap.org/ws/2004/08/addressing"  
    xmlns:htng="urn:tcbedetermined" >  
(02)   <soap:Header>  
(03)     <wsa:MessageID>uuid:C15EE2B2-B41C-44c4-901E-1032159CCC6A</wsa:MessageID>  
(04)     <wsa:ReplyTo>  
(05)       <wsa:Address>http://schemas.xmlsoap.org/ws/2004/08/addressing/role/anonymous</wsa:Address>  
(06)     </wsa:ReplyTo>  
(07)     <wsa:To>http://htng.org/abcspec</wsa:To>  
(08)     <wsa:Action> http://htng.org/abcspec/XYZ_SubmitResult</wsa:Action>  
(09)     <htng:RelatesToCorrelationID>uuid:2D11751F-916F-4clf-B1FD-9D6D051AC90A</htng:RelatesToCorrelationID>  
(10)   </soap:Header>  
(11)   <soap:Body>  
(12)     <m:XYZ_SubmitResult xmlns:m="http://htng.org/abcspec">  
(13)       ... The result ...  
(14)     </m:XYZ_SubmitResult>  
(15)   </soap:Body>  
(16) </soap:Envelope>
```

### 5.4 ASYNC4

The consumer sends back an "empty" SOAP response message.

```
(01) <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:wsa="http://schemas.xmlsoap.org/ws/2004/08/addressing">  
(02)   <soap:Header>  
(03)     <wsa:MessageID>uuid:6F400F52-8912-4dab-BEEB-FEDEC356979F</wsa:MessageID>  
(04)     <wsa:RelatesTo>uuid:C15EE2B2-B41C-44c4-901E-1032159CCC6A</wsa:RelatesTo>  
(05)     <wsa:To>http://schemas.xmlsoap.org/ws/2004/08/addressing/role/anonymous</wsa:To>  
(06)     <wsa:Action>http://xyz/MyService/XYZ_SubmitResultResponse</wsa:Action>  
(07)   </soap:Header>  
(08)   <soap:Body/>  
(09) </soap:Envelope>
```

Diagrammatically this can be represented via the following sequence diagram:

## 5.5 Asynchronous Fault Handling

There are four places where a fault can be reported:

1. In the response to \_SubmitRequest method; i.e., the provider throws a fault back to the consumer. This fault will be sent back instead of the "empty" message. If this happens, the consumer can assume that NO asynchronous process was started and there will thus be no \_SubmitResult or \_SubmitFault call.
2. In the \_SubmitFault method; i.e., the provider signals the consumer that the asynchronous operation completed as the result of a fault.
3. In the response to the \_SubmitResult method; i.e., the consumer returns a fault back to the provider as a response to the \_SubmitResult method.
4. In the response to the \_SubmitFault method; i.e., the consumer returns a fault back to the provider as a response to the \_SubmitFault method.

## 5.6 Asynchronous WSDL Structure

Create two port types, one that will hold the methods implemented by the providers and one implemented by the consumer to receive completion and error callbacks. For each `_SubmitRequest` method in the provider, create two callback methods, `_SubmitResult` and `_SubmitFault`, on the consumer's side.

## 5.7 Asynchronous WSDL Example

```
(01) <!--"Normal" port type that the provider implements.  
     Contains both synchronous methods and the initiating method of asynchronous methods-->  
(02) <portType name="ReservationProviderPortType">  
(03)   <!--This is the normal synchronous version-->  
(04)     <operation name="CreateReservation">  
(05)       <input/>  
(06)       <output/>  
(07)       <fault/>  
(08)     </operation>  
(09)   <!--This is the asynchronous version-->  
(10)     <operation name="CreateReservation_SubmitRequest">  
(11)       <input message="tns:CreateReservation_SubmitRequestInputMessage" />  
(12)       <output message="tns:EmptyMessage" />  
(13)     </operation>  
(14) </portType>  
(15) <!--"Callback" port type that the caller implements to be able to receive completion  
     callbacks (successes and failures) on asynchronous methods-->  
(16) <portType name="ReservationAsyncCompletionPortType">  
(17)   <operation name="CreateReservation_SubmitResult">  
(18)     <input message="tns:CreateReservation_SubmitResultInputMessage" />  
(19)     <output message="tns:EmptyMessage" />  
(20)   </operation>  
(21)   <operation name="CreateReservation_SubmitFault">  
(22)     <input message="tns:CreateReservation_SubmitFaultInputMessage" />  
(23)     <output message="tns:EmptyMessage" />  
(24)   </operation>  
(25) </portType>
```

## 5.8 Simple HTNG Framework 2.1 Asynchronous Sample

A sample application is contained in the file `HTNG_Framework_2.0_Simple_Async_Sample.zip` in the `HTNG_Framework_2.0_Samples.zip` archive which can be downloaded from the same location as this specification.

The sample illustrates an implementation of the HTNG Framework 2.1 asynchronous pattern in WSE 3.0. In this sample, the notion of a "provider" and a "consumer" is used. The provider represents the "service" that is providing some business functionality; in this particular sample the business functionality consists of a dummy method called "CreateReservation". The consumer represents the client application that is calling the provider to create a reservation.

The asynchronous pattern in the HTNG Framework 2.1 specifies an asynchronous operation as two separate message exchanges:

1. The consumer makes a regular synchronous http Web Service call (where the reply is received on the same connection on which the request was sent) to initiate the asynchronous request. An empty reply is sent back to indicate successful receipt of the request. The provider will kick off the asynchronous process.
2. The provider will make a regular synchronous http Web Service call (where the reply is received on the same connection on which the request was sent) to the consumer when the asynchronous process is completed to deliver the successful result or the unsuccessful fault of the asynchronous process.

The web methods that the provider and the consumer implements are described in separate portTypes in the WSDL to clearly separate the difference in the two roles that the consumer and provider plays in the message exchange.

This sample would have been fairly straightforward if WSE3 had out-of-the-box provided a way to accept http requests to a non-ASP.NET hosted process (by simply adding an "http" URI to the WSE "SoapReceivers" in the same way that it is possible to add a "soap.tcp" SoapReceiver, for example). While this is supported in WCF/Indigo, WSE3 does not support it, so this sample also contains a small Class Library "HttpSysTransport" originally written by Aaron Skonnard (with some minor enhancements) to make this possible in WSE3.

## Chapter 6 Ensuring Consistent Behavior(s) through Standardized Approaches

This chapter of the specification details some practices and approaches that should make the use of Web Services by different vendors more consistent and therefore produce a more predictable result when connecting systems and completing integration projects.

### 6.1 Overall Fault Handling

SOAP Faults will be provided as a mechanism for handling error conditions. We **highly recommend that faults are declared in the WSDL**. These may include faults that are business-dependent. For example, methods that create reservations may want to return failures for defined failure reasons like "missing arrival or departure date". Since faults relating to transportation are not (typically) known ahead of time, these would not normally be declared in the WSDL.

A response that contains a fault should be sent to the same address as a reply, unless a specific wsa:FaultTo element was specified in the header of the request message.

Documentation describing an example of SOAP fault handling is attached in Appendix A.

### 6.2 HTTP as Recommended Transport

We strongly recommended the use of HTTP for transporting messages. This specification primarily focuses on Web Services using HTTP as the transport medium.

### 6.3 WSDL Construction and Change Management

#### 6.3.1 Recommendations for Change Management for Documents and Specifications Involving Web Services

A workgroup is responsible for the WSDL and XML Schema that it delivers together with a specification. A new version of the specification results in a new WSDL and XML Schema with new namespaces. Since a new version will have a new namespace, no two versions are syntactically compatible. It is up to the workgroup to define a migration path (if one exists) in the specification.

It is highly recommended, but not required, that the target namespaces for the WSDL and XML Schema adhere to the following format:

- WSDL: <http://htng.org/<workgroup acronym>/<year and target release>/<specification name>>
- XML Schema: <http://htng.org/<workgroup acronym>/<year and target release>/<specification name>/<schema name>/Types>

For specifications under development, we recommend that the year and target release of the intended certification point be used. The following namespace format is recommended:

- WSDL: <http://htng.org/<workgroup acronym>/<year and targeted certification release>/<specification name>>
- XML Schema: <http://htng.org/<workgroup acronym>/<year and targeted certification release>/<specification name>/<schema name>/Types>

For example, if the Property Web Services Workgroup publishes a standard for Single Guest Itinerary for the 2008B release of the specification, the namespaces for the WSDL and XML Schema would be:

- WSDL: <http://htng.org/PWS/2008B/SingleGuestItinerary>
- XML Schema(s): <http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types>

These URIs both serve as a unique identifier for the namespace as well as the URLs for retrieving the WSDL and XML Schema.

#### 6.3.2 **Release Process**

- Release of draft specification – A draft specification is assumed to consist of at least three artifacts: a document explaining the specification, a WSDL file, and an XML Schema file. Before the release is made, the WSDL and XML Schema namespaces should be updated.
- Review process
- Changes to draft specification, if needed
- Ratification process
- Release of ratified specification – Update namespace of WSDL and XSD, and upload WSDL and XML Schema to the htng.org site (if and when this is available) so that in the best case, it is possible to use the namespace URIs to retrieve the WSDL and XML Schema.

Once a specification has been ratified, it becomes static and any changes would need to be considered for the next version. Once it is determined that a new release should take place, a new target release is established (i.e., 2008A or 2008B), and the release process starts over from the beginning.

Should a technical specification (e.g., Single Guest Itinerary) not require changes between specification publication points, the namespace(s) within the technical specification will remain unchanged. Concurrently, if any part of a WSDL or XML schema requires an update, the complete package (WSDLs and XML Schemas) must be updated to use the targeted certification release as per Section 6.3.1.

### 6.3.3 Change Management

Changes to a specification can be proposed by a vendor, either by submitting an extension (as described in Section 6.3.4) or by submitting a written request to HTNG. The workgroup responsible for the specification will periodically review any suggested changes, and if deemed to be of use to a wider audience, the changes are incorporated into a new version.

All extensions that are considered to become part of the standards will be assimilated into the standard XML Schema and will then live in the same namespace as the standard.

### 6.3.4 Extensibility

Once a specification has been ratified and released, it is likely that vendors implementing the specification would like to enhance the specification either by augmenting the message content or even adding completely new functionality.

### 6.3.5 For Writers of a Specification

It is recommended that the following guidelines are taken into account when building the XML Schema for a specification to ensure that the message content is extensible.

At the bottom of a complexType that should be extensible, use the construct and specify that other elements are allowed as long as they are from another namespace.

An Example follows:

```
(01)<?xml version="1.0" encoding="UTF-8"?>
(02)<xss:schema targetNamespace="http://htng.org/PWS/2008A/SomeSpecification/schema name/Types"
  xmlns:tns="http://htng.org/PWS/2008A/SomeSpecification/schema name/Types"
  xmlns:xs="http://www.w3.org/2001/XMLSchema" elementFormDefault="qualified" attributeFormDefault="unqualified">
(03) <xss:element name="Customer">
(04)   <xss:complexType>
(05)     <xss:sequence>
(06)       <xss:element name="LastName" type="xs:string" />
(07)       <xss:element name="FirstName" type="xs:string" />
(08)       <xss:element name="Address" type="tns:AddressType" />
(09)       <xss:any minOccurs="0" maxOccurs="unbounded" namespace="#other" />
(10)     </xss:sequence>
(11)   </xss:complexType>
(12) </xss:element>
(13) <xss:complexType name="AddressType">
(14)   <xss:sequence>
(15)     <xss:element name="Street" type="xs:string" />
(16)     <xss:element name="ZipCode" type="xs:string" />
(17)     <xss:any minOccurs="0" maxOccurs="unbounded" namespace="#other" />
(18)   </xss:sequence>
(19) </xss:complexType>
(20)</xss:schema>
```

It is highly recommended that this pattern is used in as many (if not all) complexTypes that are defined in the XML Schema to allow for maximum extensibility.

**NOTE:** This model was chosen for its simplicity. There are other extensibility models that would work as well, but the <xs:any> version is straightforward and does not require dependency on some common XML Schema.

### 6.3.6 For Implementors of a Published Specification

#### 6.3.6.1 Extending the XML Schema

Assuming that the simple model described above has been used, it is recommended that if a vendor wishes to extend an existing complexType they go through the following steps.

- Create a new schema
- Assign a unique specific namespace. There are no specific guidelines for what namespace is used as long as it is ensured to be globally unique.
- Create elements for all of the extra content that will go into the messages. Add annotations to each new element and describe the purpose of the element and where it will be used.
- If the vendor would like to make the extension public, the vendor can upload the specification at the HTNG extensions area at [www.htng.org](http://www.htng.org).

#### Example

Let's assume a vendor would like to extend the (partial) schema described in the section above. The vendor would create the following schema to describe the additional elements needed:

```
(01) <xs:schema targetNamespace="urn:some:unique:namespace"
  xmlns:tns="urn:some:unique:namespace"
  xmlns:xs="http://www.w3.org/2001/XMLSchema"
  elementFormDefault="qualified" attributeFormDefault="unqualified">
(02)   <xs:element name="MiddleName">
(03)     <xs:annotation>
(04)       <xs:documentation>This element extends the "Customer" element defined in the XYZ specification version X.Y.</xs:documentation>
(05)     </xs:annotation>
(06)   </xs:element>
(07)   <xs:element name="Country">
(08)     <xs:annotation>
(09)       <xs:documentation>This element extends the "AddressType" complexType defined in the XYZ specification version
X.Y.</xs:documentation>
(10)     </xs:annotation>
(11)   </xs:element>
(12) </xs:schema>
```

The extended "Customer" element could then look like this:

```
(01) <Customer
```

```
xmlns="urn:some:unique:namespace"
xmlns:a="urn:some:unique:namespace">
(02)    <LastName>Smith</LastName>
(03)    <FirstName>John</FirstName>
(04)    <Address>
(05)        <Street>123 Main Street</Street>
(06)        <ZipCode>11111</ZipCode>
(07)        <a:Country>USA</a:Country>
(08)    </Address>
(09)    <a:MiddleName>Gary</a:MiddleName>
(10) </Customer>
```

### 6.3.6.2 Extending the WSDL

If a vendor needs to add functionality, it is highly recommended that a new WSDL is created with a new and unique namespace that will hold the new portType that will only contain the new/changed operations. The new WSDL may reference the WSDL and/or XML Schema that are part of the specification.

### 6.3.7 Suggested Workgroup Acronyms

Workgroup	Acronym
Architecture	ARC
Distribution Content Management	DCM
In-Room Technology	IRT
Payments	PMT
Property Distribution	PDS
Property Web Services	PWS

### 6.3.8 Guidelines for Composing WSDL and XML Schemas

#### 6.3.8.1 References to Other WSDLs/Schemas

It is recommended to refrain from referencing WSDLs and/or XML Schemas that are part of other specifications. In the case that this is necessary, it is recommended to explicitly state the dependency on other standards in the specification text.

#### 6.3.8.2 WSDL Structure

It is recommended that the following WS-I guidelines ([www.ws-i.org](http://www.ws-i.org)) are observed. In addition, it is strongly suggested that **types are defined in a separate schema and not in the WSDL**.

### 6.3.8.3 XML Schema

We recommend the following nomenclature approaches:

- Element names should use Pascal casing; i.e., capitalize the first letter in a word.
- Attribute names should use Camel casing; i.e., capitalize the first letter in a word except the first letter.
- Elements be given names that can be easily understood.

## 6.4 Security (if in use)

We recommend the use of WS Security as part of the normal development process. Below is a sample Synchronous message that uses the UsernameToken element as per WS-Security 1.0. WS-Addressing headers are also included. Note that the message is only using WS-Security for authentication; therefore, no in-message signature or encryption is performed. The password is provided in clear text, and implies that the communication is secured at the transport level.

### 6.4.1 Security XML Example

```
(01) <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/"  
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"  
    xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:wsa="http://schemas.xmlsoap.org/ws/2004/08/addressing"  
    xmlns:wsse="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-secext-1.0.xsd"  
    xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">  
(02)     <soap:Header>  
(03)         <wsa:Action>http://htng.org/PWSWG/2006/05/BanquetEventOrder#BeoRequest</wsa:Action>  
(04)         <wsa:MessageID>urn:uuid:29f43cdc-a621-4e2c-80af-3653545d5502</wsa:MessageID>  
(05)         <wsa:ReplyTo>  
(06)             <wsa:Address>http://schemas.xmlsoap.org/ws/2004/08/addressing/role/anonymous</wsa:Address>  
(07)         </wsa:ReplyTo>  
(08)         <wsa:To>http://127.0.0.1/NIIS/BeoService/BeoService.asmx</wsa:To>  
(09)         <wsse:Security soap:mustUnderstand="1">  
(10)             <wsu:Timestamp wsu:Id="Timestamp-9f540437-93c5-4b9d-9d57-afad42eb007b">  
(11)                 <wsu:Created>2006-10-30T16:07:46Z</wsu:Created>  
(12)                 <wsu:Expires>2006-10-30T16:12:46Z</wsu:Expires>  
(13)             </wsu:Timestamp>  
(14)             <wsse:UsernameToken  
        xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"  
        wsu:Id="SecurityToken-9d1092c8-afdd-421c-9d78-044f6c25d777">  
(15)                 <wsse:Username>TestUserName</wsse:Username>  
(16)                 <wsse:Password Type="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-username-token-profile-  
1.0#PasswordText">TestPasswordValue</wsse:Password>  
(17)                     <wsse:Nonce>+c1BfJJ13S1sm6J419Wk2w==</wsse:Nonce>  
(18)                     <wsu:Created>2006-10-30T16:07:46Z</wsu:Created>  
(19)                 </wsse:UsernameToken>  
(20)             </wsse:Security>  
(21)         </soap:Header>  
(22)         <soap:Body>  
(23)             </soap:Body>  
(24)     </soap:Envelope>
```

## 6.5 Routing

Limited discussion has taken place to date on routing. The discussions to date have determined:

- If routing (or any type of intermediary forwarding mechanism) is used, a next-hop approach is highly recommended; i.e., every entity in the chain knows only of the next hop in the chain.
- Every end point should be treated in the same way; i.e., there is no discernible difference between an intermediary (e.g., a router) and the logical final recipient.

## 6.6 Reliability

Discussion has taken place with respect to the applicability of WS-Reliability within Framework 2.1. The group determined that specific individual vendors may wish to agree and implement WS-Reliability within a particular workgroup or against an agreed set of messages. This should be able to take place within the existing Framework 2.1 Header structure. Unless an agreement is specifically in place, WS-Reliability is not a requirement for either Synchronous or Asynchronous processing.

A workgroup may include other SOAP headers within a Framework 2.1 message in order to implement other functions as required by their own implementation of an interface.

## 6.7 Handling Attachments

The workgroup recommends the use of MTOM as the methodology for handling attachments with messaging.

## Appendix A SOAP Fault Handling

It is recommended to use the standard SOAP fault model as described in the SOAP 1.1 and 1.2. This specification divides faults into two categories:

1. Faults that are known ahead of time, which are typically business-specific faults and are specific to each Web Service. These faults are well defined in the WSDL and XML Schema of the Web Service.
2. Faults that are not known ahead of time, which are typically implementation-specific faults; e.g., communication faults, etc.

### A.1. Declarative Approach

Faults that are known ahead of time and are business-specific should be declared in the WSDL to let the consumer of the Web Service know what types of business-related faults can be expected by calling a specific method. Each fault must also have a corresponding XML Schema element declared that uniquely describes the fault. Consider the following WSDL definition of a Web Service Method where there are two faults declared in the WSDL:

```
(01) <operation name="CreateReservation">
(02)   <input message="tns:CreateReservationInputMessage"/>
(03)   <output message="tns:CreateReservationOutputMessage"/>
(04)   <fault name="NoAvailability" message="tns>NoAvailabilityFaultMessage">
(05)     <documentation>Thrown if there is no longer any availability;</documentation>
(06)   </fault>
(07)   <fault name="InvalidData" message="tns:InvalidDataFaultMessage">
(08)     <documentation>Thrown if one or more fields in the data are not
          filled in or did not validate.
          The contents of the fault will contain more
          information
        </documentation>
(09)   </fault>
(10) </operation>
```

The message definition for the NoAvailabilityFaultMessage and InvalidDataFaultMessage look like this:

```
(01) <message name="NoAvailabilityFaultMessage">
(02)   <part name="parameters" element="tns:NoAvailabilityFault"/>
(03) </message>
(04) <message name="InvalidDataFaultMessage">
(05)   <part name="parameters" element="tns:InvalidDataFault"/>
(06) </message>
```

And the XML Schema elements NoAvailabilityFault and InvalidDataFault look like this:

```
(01) <x:element name="NoAvailabilityFault">
(02)   <x:complexType>
(03)     <x:sequence>
(04)       <x:element name="FirstAvailableDateAndTime" type="x:dateTime"/>
(05)     </x:sequence>
(06)   </x:complexType>
```

```
(07) </xs:element>
(08) <xs:element name="InvalidDataFault">
(09)   <xs:complexType>
(10)     <xs:sequence>
(11)       <xs:element name="Field" maxOccurs="unbounded">
(12)         <xs:complexType>
(13)           <xs:sequence>
(14)             <xs:element name="Reason" type="xs:string"/>
(15)           </xs:sequence>
(16)         <xs:attribute name="name" type="xs:string" use="required"/>
(17)       </xs:complexType>
(18)     </xs:element>
(19)   </xs:sequence>
(20) </xs:complexType>
(21) </xs:element>
```

A SOAP 1.2 envelope containing the SOAP fault for InvalidData would look like this:

```
(01) <env:Envelope xmlns:env="http://www.w3.org/2003/05/soap-envelope"
                  xmlns:t="http://new.webservice.namespace"
                  xmlns:xml="http://www.w3.org/XML/1998/namespace">
  ... WS-Addressing, Security, etc headers omitted ...
(02)   <env:Body>
(03)     <env:Fault>
(04)       <env:Code>
(05)         <env:Value>env:Sender</env:Value>
(06)         <env:Subcode>
(07)           <env:Value>t:InvalidData</env:Value>
(08)         </env:Subcode>
(09)       </env:Code>
(10)       <env:Reason>
(11)         <env:Text xml:lang="en">Some of the fields were
            invalid</env:Text>
(12)       </env:Reason>
(13)       <env:Detail>
(14)         <t:InvalidDataFault>
(15)           <t:Field name="FirstName">
(16)             <t:Reason>A first name must set</t:Reason>
(17)           </t:Field>
(18)           <t:Field name="DOB">
(19)             <t:Reason>The date of birth cannot be in the
            future</t:Reason>
(20)           </t:Field>
(21)         </t:InvalidDataFault>
(22)       </env:Detail>
(23)     </env:Fault>
(24)   </env:Body>
(25) </env:Envelope>
```

And the SOAP 1.2 envelope for the NoAvailability fault would look like this:

```
(01) <env:Envelope xmlns:env="http://www.w3.org/2003/05/soap-envelope"
                  xmlns:t="http://new.webservice.namespace"
```

```
xmlns:xml="http://www.w3.org/XML/1998/namespace">
... WS-Addressing, Security, etc headers omitted ...
(02)   <env:Body>
(03)     <env:Fault>
(04)       <env:Code>
(05)         <env:Value>env:Sender</env:Value>
(06)         <env:Subcode>
(07)           <env:Value>t>NoAvailability</env:Value>
(08)         </env:Subcode>
(09)       </env:Code>
(10)     <env:Reason>
(11)       <env:Text xml:lang="en">There was no availability
          left to complete the reservation.
        </env:Text>
(12)     </env:Reason>
(13)   <env:Detail>
(14)     <t>NoAvailabilityFault>
(15)       <t:FirstAvailableDateAndTime>2006-12-17T09:30:00Z</t:FirstAvailableDateAndTime>
(16)     </t>NoAvailabilityFault>
(17)   </env:Detail>
(18) </env:Fault>
(19) </env:Body>
(20) </env:Envelope>
```

**NOTE:** The example above represents the SOAP message carrying a fault as it might look in a synchronous session, or in an asynchronous session if the fault were to occur in the context of the call.

Fault(s) that occur in the asynchronous process initiated by an asynchronous call would be submitted to the consumer via the \_SubmitFault operation, therefore the SOAP message might look close to the following:

```
(01) <env:Envelope xmlns:env="http://www.w3.org/2003/05/soap-envelope"
  xmlns:t="http://new.webservice.namespace"
  xmlns:xml="http://www.w3.org/XML/1998/namespace">
... WS-Addressing, Security, RelatesToCorrelationID etc. headers omitted ...
(02)   <env:Body>
(03)     <m:XYZ_SubmitFault>
(04)       <env:Fault>
(05)         <env:Code>
(06)           <env:Value>env:Sender</env:Value>
(07)           <env:Subcode>
(08)             <env:Value>t>NoAvailability</env:Value>
(09)           </env:Subcode>
(10)         </env:Code>
(11)         <env:Reason>
(12)           <env:Text xml:lang="en">There was no availability left to complete the reservation.</env:Text>
(13)         </env:Reason>
(14)         <env:Detail>
(15)           <t>NoAvailabilityFault>
(16)             <t:FirstAvailableDateAndTime>2006-12-17T09:30:00Z</t:FirstAvailableDateAndTime>
(17)           </t>NoAvailabilityFault>
(18)         </env:Detail>
(19)       </env:Fault>
(20)     </m:XYZ_SubmitFault>
```

(21) </env:Body>  
(22) </env:Envelope>

## Appendix B SOAP Exception Handling

A sample application has been created that provides an example of SOAP exception handling.

This example is contained in the file *HTNG\_Framework\_2.0\_SOAP\_Fault\_Handling\_with\_WSE\_Sample.zip* in the *HTNG\_Framework\_2.0\_Samples.zip* archive which can be downloaded from the same location as this specification.

The package contains examples and utilities for how to more easily use structured SOAP exceptions in the Microsoft WSE environment. Microsoft WSE does not fully implement structured SOAP exceptions (those exceptions that are identified by the contents of the <Detail> element in the SOAP fault element).

The method described in the example is intended to be similar to what is seen in other web service toolkits; e.g., AXIS, and Microsoft's upcoming communication framework "WCF" (previously known as "Indigo"). Once WCF is released, porting structured SOAP exception handling using this method will be straightforward. In order to make this work, this method consists of two parts:

1. A utility to generate the exception classes that correspond to a WSDL <fault> element that refers to a message with an XML Schema element describing the content. This utility is provided in this package as a console application with full source called "GenerateFaultWrappersFromWsdl". The exception classes that are created all inherit from SoapException, so it is easy and straightforward to use them on the service side; simply "throw" the strongly typed exception and you are done. A little bit more work is required on the client side to translate the SoapException to a strongly typed exception; for this purpose, the GenerateFaultWrappersFromWsdl utility also generates a class to map a SoapException to a strongly typed exception.
2. In order to make the translation of the exception on the client side happen seamlessly to the caller of the web service proxy, the proxy class that gets generated by the Wsdl/WseWsdl3 utilities needs to be extended. With .NET2 this can be done in a non-invasive way since the proxy web service class is generated with the "partial" attribute. Please see the MathServiceExtension.cs source file in "Contract.Client".

**NOTE:** One alternative to this could also be to implement a custom Policy Assertion in WSE3 and throw the strongly typed exception from there. Unfortunately, WSE3 will wrap all non-SoapException exceptions thrown from a policy assertion, which would not let the caller use the plain try {} catch {} pattern.

This will allow service implementers use the following style of code:

```
throw new MyStronglyTypedException(...);
```

And client implementers use the following style of code:

```
try
{
    Mywebserviceproxy.SomeCall(...);
}
catch(MyStronglyTypedException myException)
{
```

```
// The content of the exception is in the myException.TypedDetail property  
}
```

## Appendix C Math(A+B) Sample Project

A sample application is provided that implements a simple A+B application. This application should be used as a minimum primer to become familiar with Framework 2.1.

This example is contained in the file *HTNG\_Framework\_2.0\_Math\_A+B\_Sample.zip* in the *HTNG\_Framework\_2.0\_Samples.zip* archive which can be downloaded from the same location as this specification.

This example contains:

- Custom UserTokenManager that demonstrates and discusses how to implement proprietary authentication
- Custom Policy implemented in code to require SOAP action header and UsernameToken
- Web service implementation of add, subtract, multiply, divide
- Console application client that demonstrates how to call the service with a username token, etc.

## Appendix D Payment Posting Example

A sample application is provided that implements the payment posting message. This message has been most recently used by the Single Guest Itinerary workgroup.

The sample is contained in the file *HTNG\_Framework\_2.0\_Payment\_Posting\_Sample.zip* in the *HTNG\_Framework\_2.0\_Samples.zip* archive which can be downloaded from the same location as this specification.

The example implements a Web Service at [htng.org/PWSWG/2006/04/SingleGuestItinerary#PostPayment](http://htng.org/PWSWG/2006/04/SingleGuestItinerary#PostPayment) and was developed using a small part of Activity.wsdl designed by Guest Itinerary Workgroup. The WSDL that was used can be found in the Schema subfolder.

**NOTE:** No custom Fault conditions were defined in the WSDL.

The following pre-requisites are required on the system in order to build and run the sample:

- MS IIS
- MS .NET Framework v2.0
- MS Visual Studio 2005
- MS Web Service Enhancements v3.0

## Appendix E Additional Examples

Additional examples have been provided by the Workgroup to assist in people's understanding of Framework 2.1.

### HTNG 2.0 OTA Ping Service

This example is contained in the file *HTNG\_Framework\_2.0\_OTA\_Ping\_Sample.zip* in the *HTNG\_Framework\_2.0\_Samples.zip* archive which can be downloaded from the same location as this specification.

The zip archive contains:

- A WSDL which describes the service and should allow the generation of the client code
- An example for the request and response including the HTTP header

To use the service, use:

- username = trust
- password = xyz

The service is programmed in Java and uses AXIS 1.4.

For addressing, [schemas.xmlsoap.org/ws/2008/08](http://schemas.xmlsoap.org/ws/2008/08) was used.

### WS-Security Example

This example is contained in the file *HTNG\_Framework\_2.0\_WS\_Security\_Sample.xml* in the *HTNG\_Framework\_2.0\_Samples.zip* archive which can be downloaded from the same location as this specification.

This is a sample Synchronous message that uses the UsernameToken element as per WS-Security 1.0. WS-Addressing headers are also included. Please note that the message is only using WS-Security for authentication, therefore no in-message signature or encryption is performed. The password is provided in clear text, and implies that the communication is secured at the transport level.

### HTNG 2.0 Asynchronous OTA Ping Sample for .NET 2.0 and WSE 3.0

This is a simple example of an OTA ping using the Asynchronous processing model 2.

*Part 2: Single Guest Itinerary, Version 2.2.1*

## Chapter 7 Document Information (Part 2)

7.1 Change History			
Revision	Description	Date	Author
1.0	Initial submission	November 8, 2006	Tom Gresham, MICROS Systems, Inc.
1.0.1	Remove "Draft", add additional samples, revise terminology	February 5, 2006	Tom Gresham, MICROS Systems, Inc. Penka Sevova, PAR Springer-Miller Systems
2.0	Updates for version 2.0	February 12, 2008	Tom Gresham, MICROS Systems, Inc. Victor Konopik, MICROS Systems, Inc. Sergeo Khomutetsky, MICROS Systems, Inc.
2.1	Revision for 2008B	September 9, 2008	Tom Gresham, MICROS Systems, Inc.
2.2	Added missing merge profile message	September 15, 2008	Tom Gresham, MICROS Systems, Inc.

7.2 Contributors	
Company/Organization	Contributor
FCS Computer Systems	Chris Armour
Four Seasons Hotels & Resorts	Natasha Nelson
Hotel Technology Next Generation	Douglas Rice

NOTE: Version 2.2.1, posted on 27 May 2010, includes an addendum to Single Guest Itinerary, which defines the roles and use cases for the specification, and which was inadvertently omitted from the original document. The addendum is posted as an additional document on the Open Group site, where Property Web Services is posted.

## Chapter 8 Activity Service

The WSDL for the HTNG Activity Reservation System defines the “ActivityService” web service. This web service consists of 19 functions defined in six port types. The port types are:

- **ActivityPortType** – Generic activity functions which are implemented by both the Itinerary Consolidation System and the Activity Reservation System.
- **ActivityProviderBinding** – Activity functions only applicable to the Activity Reservation System.
- **ActivitySyncBinding** – Activity functions only applicable to the Itinerary Consolidation System.
- **NameBinding** – Support functions for guest profile information, applicable to both the Itinerary Consolidation System and the Activity Reservation System.
- **ReservationProviderBinding** – Support functions for reservation information, applicable to the Activity Reservation System.
- **ReservationSyncBinding** – Support functions for reservation information, applicable to the Itinerary Consolidation System.

### 8.1 Supporting Schemas

The Activity Web Service imports five schemas which define the data payloads required by the functional messages. These are:

- **Activity.xsd** – Defines messages specific to activities.
- **Common.xsd** – Defines generic types used by various other elements.
- **Name.xsd** – Defines data types specific to a guest profile.
- **PmtPosting.xsd** – Defines data required for payment posting.
- **Reservation.xsd** – Defines data applicable to a guest reservation.

Common elements used in several messages are included in the [Common Schema Elements](#) section of this document.

### 8.2 Soap Header

All messages must include a soap header that conforms to the WSAddressing and WSSecurity specifications. Receiving systems may optionally require that the wsa:To element match a specific destination address, and therefore this element should be configurable at run time. In addition, all sending systems must identify themselves by specifying a wsa:From element unique for their system. Typically, this is in the form of “URN:<system>”. The wsa:ReplyTo address may be the anonymous form described in the August, 2004 specification.

WSSecurity may be optionally implemented. Providers are only required to support basic plain text authentication with a username and password. The user credentials will be limited to a single login per system, agreed between two vendors. There is no requirement to support multiple user logins from a single vendor through this interface.

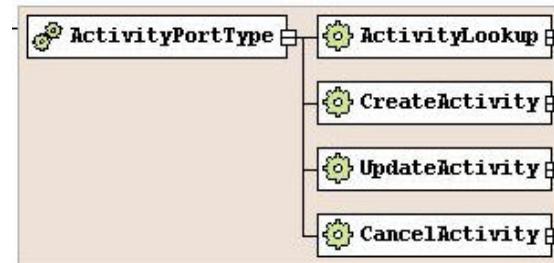

### 8.2.1 Sample Header Message

```
<soap:Header>
  <wsa:Action>http://htng.org/PWS/2008B/SingleGuestItinerary#PostPayment</wsa:Action>
  <wsa:From>

</soap:Header>
```

## Chapter 9 Activity Port Type

The Activity Port defines four functions which should be implemented by both the Itinerary Consolidation System and the Activity Reservation System. These are:

- **ActivityLookup** – Function to request a list of guest records with or without activities matching one or more search criteria.
- **CreateActivity** – Function to create an activity record.
- **UpdateActivity** – Function to update an activity record.
- **CancelActivity** – Function to cancel a scheduled activity.

### 9.1 Activity Lookup

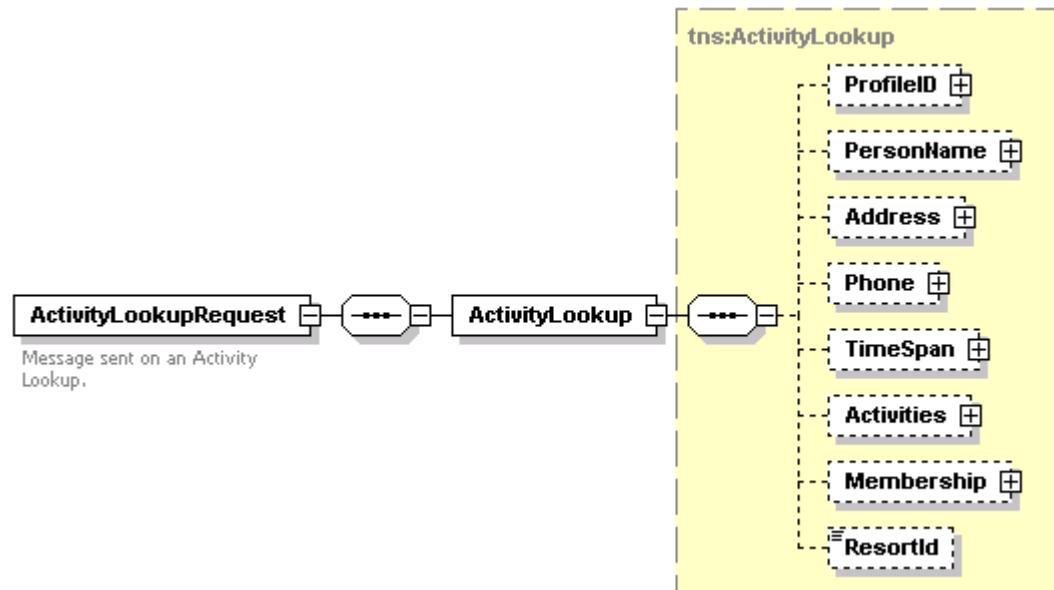

An activity lookup request message is submitted in order to return a list of activities that match one or more criteria. The items which may be submitted in the request are various aspects of the guest profile record, such as a guest's name, guest ID, telephone number, or membership number. The requesting system submits an ActivityLookupRequest message, and the responding system returns an ActivityLookupResponse. This message is applicable to both the Activity Reservation System and the Itinerary Consolidation System.

It is required, at a minimum, that the requesting system sends either a guest profile identifier valid in the external system, or a guest's last name. The receiving system may use the remainder of the filter information in order to further limit the search. However, as the request message includes a substantial number of data elements (due to message re-use), the receiving system is not required to process every filter item sent. The responding system should include profiles matching the search criteria regardless whether there are activities attached to the profile or not.

As this operation is most often performed through user interaction, it is important that the lookup respond in a reasonable timeframe. If the criteria are too broad, the responding system should limit the result set to a reasonable number of items. This reduces the time needed to collect and respond with the data, and reduces the length of the data returned. As this operation may often return a list of possible selections, the number should also be limited since an operator would not typically want to scroll through more than a few dozen records.

<b>Port</b>	ActivityPortType
<b>Binding</b>	ActivityBinding
<b>Operation</b>	ActivityLookup
<b>Soap Action</b>	http://htng.org/PWS/2008B/SingleGuestItinerary#ActivityLookup
<b>Input</b>	ActivityLookupRequest
<b>Output</b>	ActivityLookupResponse
<b>Primary Schema</b>	Activity.xsd
<b>Role(s) Implemented</b>	Itinerary Consolidation System, Activity Reservation System

#### 9.1.1 ActivityLookupRequest

```

<xs:element name="ActivityLookupRequest">
  <xs:annotation>
    <xs:documentation>Message sent on an Activity Lookup.</xs:documentation>
  </xs:annotation>
  <xs:complexType>
    <xs:sequence>
      <xs:element name="ActivityLookup" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" type="q1:ActivityLookup" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

Name	Type	Data Type	Use	Comments
ActivityLookup	element	ActivityLookup	required	Contains search criteria used for activity lookup.

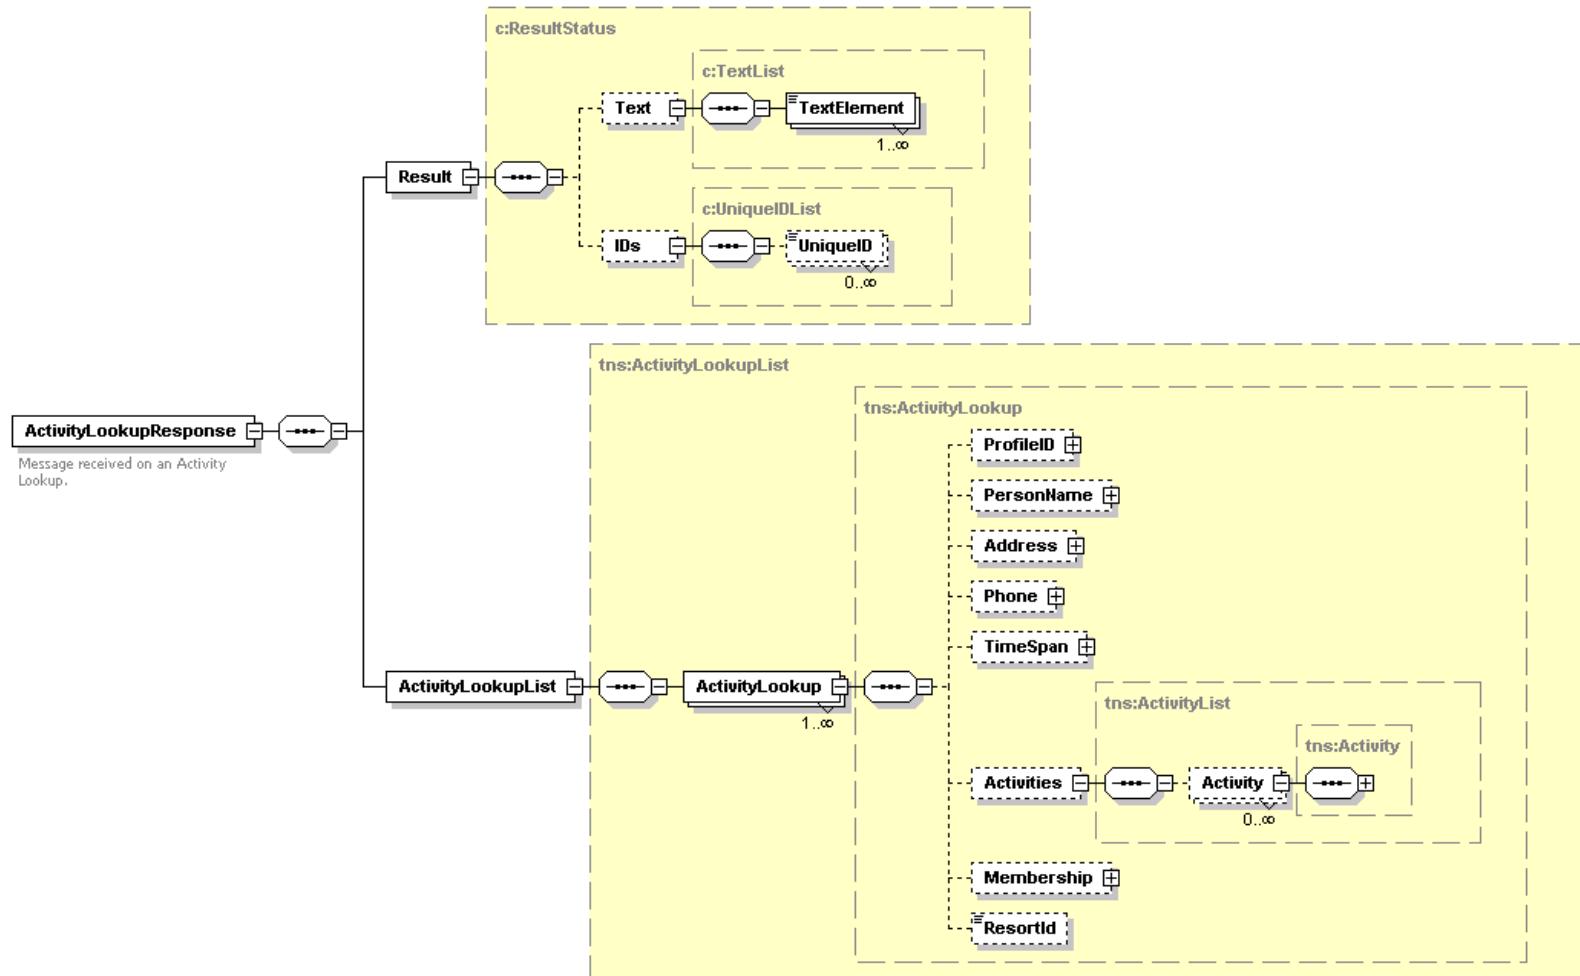

### 9.1.1.1 ActivityLookup

```
<xs:complexType name="ActivityLookup">
  <xs:annotation>
    <xs:documentation>Used in the request message to describe the "filter" when executing an activity lookup. Also used in the response message to return the activities matching the filter criteria.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element minOccurs="0" name="ProfileID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueIDList" />
    <xs:element minOccurs="0" name="PersonName" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:PersonName" />
    <xs:element minOccurs="0" name="Address" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:Address" />
    <xs:element minOccurs="0" name="Phone" xmlns:q4="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q4:Phone" />
    <xs:element minOccurs="0" name="TimeSpan" xmlns:q5="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q5:TimeSpan" />
    <xs:element minOccurs="0" name="Activities" xmlns:q6="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" type="q6:ActivityList" />
    <xs:element minOccurs="0" name="Membership" xmlns:q7="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q7:Membership" />
    <xs:element minOccurs="0" name="ResortId" type="xs:string" />
  </xs:sequence>
  <xs:attribute name="externalSystemId" type="xs:string" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
externalSystemId	attribute	string	none	Not used in this context.
ProfileID	element	UniqueIDList	optional	Filter to lookup activities belonging to a specific guest profile record. The ID value applies to destination system (not requesting guest ID). Although an ID list is specified, the responding system is required to only process the first ID in the list (it may optionally process additional IDs). At a minimum, either a profile ID or a guest last name must be specified in this message.
PersonName	element	PersonName	optional	The name of the guest to search activities for. At a minimum, the guest's last name must be specified (unless searching by profile ID).
Address	element	Address	optional	The guest address details to further limit the search. The responding may optionally process this filter but is not required to do so.
Phone	element	Phone	optional	The guest telephone number to further limit the search. The responding may optionally process this filter but is not required to do so.
TimeSpan	element	TimeSpan	optional	A period of time for which to return activities for. If this optional criterion is applied, then any activity that begins, spans, or ends during this time period should be returned.
Activities	element	ActivityList	optional	An optional filter to search for specific activity matches.
Membership	element	Membership	optional	An optional filter to enhance guest name search by including

				membership information.
ResortId	Element	string	optional	An optional filter when searching in a specific property. Typically, this is not applicable in this context.

### 9.1.2 ActivityLookupResponse

```

<xs:element name="ActivityLookupResponse">
  <xs:annotation>
    <xs:documentation>Message received on an Activity Lookup.</xs:documentation>
  </xs:annotation>

```

```
</xs:annotation>
<xs:complexType>
  <xs:sequence>
    <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
    <xs:element name="ActivityLookupList" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" type="q2:ActivityLookupList" />
  </xs:sequence>
</xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	Lookup result. If successful, the responding system is only required to set the resultStatusFlag as SUCCESS, and return the data in the ActivityLookupList.
ActivityLookupList	element	ActivityLookupList	required	A list of matching activity records.

#### 9.1.2.1 ActivityLookupList

```
<xs:complexType name="ActivityLookupList">
  <xs:annotation>
    <xs:documentation>A collection of Activity Lookup items.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element maxOccurs="unbounded" name="ActivityLookup" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types"
      type="q1:ActivityLookup" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
ActivityLookup	element	ActivityLookup	required/multiple	A container for one or more ActivyLookup records.

#### 9.1.2.2 ActivityLookup

```
<xs:complexType name="ActivityLookup">
  <xs:annotation>
    <xs:documentation>Used in the request message to describe the "filter" when executing an activity lookup. Also used in the response message to return the activities matching the filter criteria.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element minOccurs="0" name="ProfileID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueIDList" />
    <xs:element minOccurs="0" name="PersonName" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:PersonName" />
    <xs:element minOccurs="0" name="Address" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:Address" />
    <xs:element minOccurs="0" name="Phone" xmlns:q4="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q4:Phone" />
    <xs:element minOccurs="0" name="TimeSpan" xmlns:q5="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q5:TimeSpan" />
    <xs:element minOccurs="0" name="Activities" xmlns:q6="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" type="q6:ActivityList" />
    <xs:element minOccurs="0" name="Membership" xmlns:q7="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q7:Membership" />
    <xs:element minOccurs="0" name="ResortId" type="xs:string" />
  </xs:sequence>
  <xs:attribute name="externalSystemId" type="xs:string" />
```

</xs:complexType>				
Name	Type	Data Type	Use	Comments
externalSystemId	attribute	string	none	Not used in this context.
ProfileID	element	UniqueIDList	optional	The profile ID from the responding system for the activity record. This is operationally required in this context.
PersonName	element	PersonName	optional	The guest name responsible for the activity. This is required in this context.
Address	element	Address	optional	The guest's primary address.
Phone	element	Phone	optional	The guest's primary phone number.
TimeSpan	element	TimeSpan	optional	The time the activity starts and its duration. Required in this context.
Activities	element	ActivityList	optional	A list of activities scheduled for this guest.
Membership	element	Membership	optional	The guest membership information.
ResortId	element	string	optional	The property code if applicable.

### 9.1.2.3 ActivityList

```
<xs:complexType name="ActivityList">
  <xs:annotation>
    <xs:documentation xml:lang="en">A collection of Activity objects.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Activity">
      <xs:complexType>
        <xs:complexContent mixed="false">
          <xs:extension xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" base="q1:Activity" />
        </xs:complexContent>
      </xs:complexType>
    </xs:element>
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Activity	element		optional/ multiple	A collection of activity records.

## 9.2 Create Activity

The create activity message is used to add a new activity record. The requesting system submits a CreateActivityRequest (ActivityRequest) message, and the responding system returns a CreateActivityResponse (ActivityResponse). This message is primarily applicable to the Itinerary Consolidation System, but may also be implemented by the Activity Reservation System. In order to create an activity in an external system, the requesting system must send either the guest profile ID or the guest reservation number, as defined in the receiving system. If successful, the response message should include a list of activity IDs created in the external system. Note that multiple activities may be created against a single reservation or guest profile with one request.

<b>Port</b>	ActivityPortType
<b>Binding</b>	ActivityBinding
<b>Operation</b>	CreateActivity
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#CreateActivity">http://htng.org/PWS/2008B/SingleGuestItinerary#CreateActivity</a>
<b>Input</b>	CreateActivityRequest
<b>Output</b>	CreateActivityResponse
<b>Primary Schema</b>	Activity.xsd
<b>Role(s) Implemented</b>	Itinerary Consolidation System, Activity Reservation System

### 9.2.1 ActivityRequest

```
<xs:complexType name="ActivityRequest">
  <xs:annotation>
    <xs:documentation>Generic self-contained request object that is used when inserting/ updating/ canceling activities.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element minOccurs="0" name="ResortId" type="xs:string">
      <xs:annotation>
        <xs:documentation>This is not required if a Reservation Id is provided</xs:documentation>
      </xs:annotation>
    </xs:element>
    <xs:choice>
      <xs:annotation>
        <xs:documentation xml:lang="en">The choice between a reservation header or a profile ID. One or the other is required.</xs:documentation>
      </xs:annotation>
      <xs:element name="ReservationHeader" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" type="q1:ReservationHeader" />
      <xs:element name="ProfileID" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:UniqueId" />
    </xs:choice>
    <xs:element name="Activities" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" type="q3:ActivityList">
      <xs:annotation>
        <xs:documentation>A collection of activities</xs:documentation>
      </xs:annotation>
    </xs:element>
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
ResortId	element	string	optional	The property code to create the activity for.
ReservationHeader	element	ReservationHeader	required	Identifies the guest reservation to create the activity against. Either this element or the ProfileID must be specified.
ProfileID	element	UniqueID	required	Identifies the guest profile to create the activity against. Either this element or the ReservationHeader must be specified.
Activities	element	ActivityList	required	A collection of activities to create for the reservation or guest specified.

#### 9.2.1.1 ReservationHeader

```
<xs:complexType name="ReservationHeader">
  <xs:annotation>
    <xs:documentation>Used to uniquely identify a reservation using it's internal ID, it's begin date and duration or end date.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element name="ReservationID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueID">
      <xs:annotation>
        <xs:documentation>Required unique identifier of the reservation</xs:documentation>
      </xs:annotation>
    </xs:element>
    <xs:element minOccurs="0" name="TimeSpan" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:TimeSpan" />
  </xs:sequence>
</xs:complexType>
```

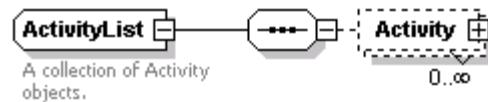

Name	Type	Data Type	Use	Comments
ReservationID	element	UniqueID	required	The reservation ID, as defined by the receiving system.
TimeSpan	element	TimeSpan	optional	Not required in this context.

#### 9.2.1.2 UniqueID

```
<xs:complexType name="UniqueID">
  <xs:simpleContent>
    <xs:extension base="xs:string">
      <xs:attribute name="source" type="xs:string" />
    </xs:extension>
  </xs:simpleContent>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
UniqueID	extension	string		The guest profile ID, as defined in the receiving system.
source	attribute	string	none	The source attribute that identifies the receiving system.

### 9.2.1.3 ActivityList

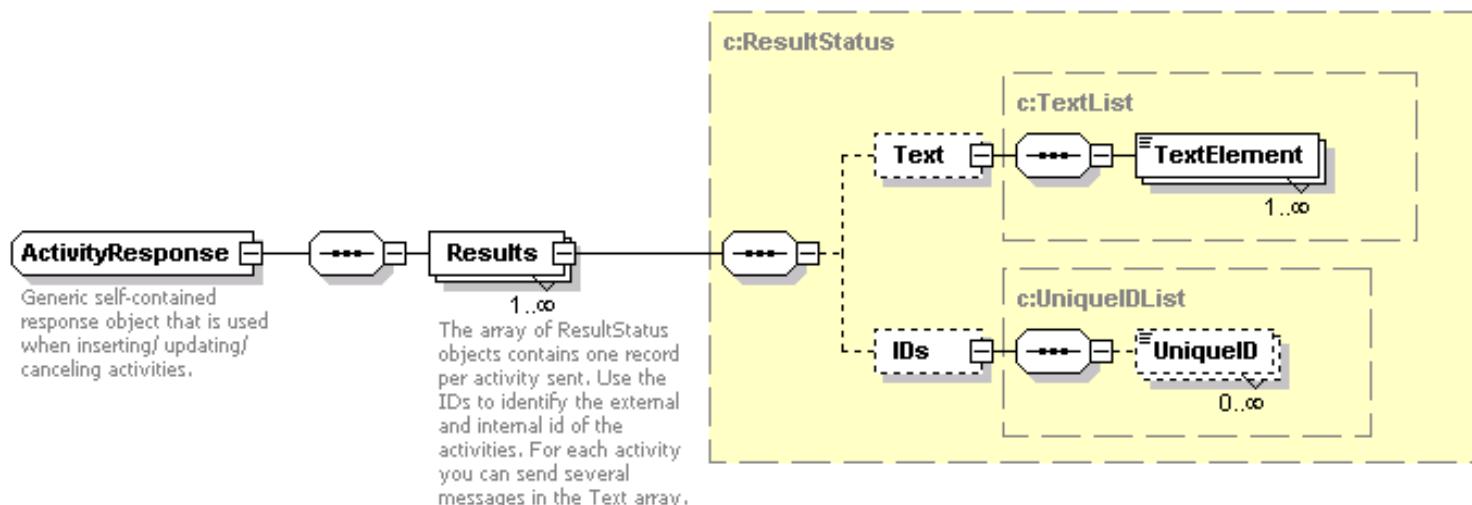

```

<xs:complexType name="ActivityList">
  <xs:annotation>
    <xs:documentation xml:lang="en">A collection of Activity objects.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Activity">
      <xs:complexType>
        <xs:complexContent mixed="false">
          <xs:extension xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" base="q1:Activity" />
        </xs:complexContent>
      </xs:complexType>
    </xs:element>
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
Activity	element		optional/ multiple	A collection of activity records to create in the external system.

### 9.2.2 ActivityResponse

```
<xs:complexType name="ActivityResponse">
  <xs:annotation>
    <xs:documentation>Generic self-contained response object that is used when inserting/ updating/ canceling activities.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element maxOccurs="unbounded" name="Results" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types"
      type="q1:ResultStatus">
      <xs:annotation>
        <xs:documentation>The array of ResultStatus objects contains one record per activity sent. Use the IDs to identify the external and internal id of the
          activities. For each activity you can send several messages in the Text array.</xs:documentation>
      </xs:annotation>
    </xs:element>
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Results	element	ResultStatus	required/           multiple	A collection of result elements; one for each activity requested.

### 9.2.2.1 ResultStatus

```
<xs:complexType name="ResultStatus">
  <xs:sequence>
    <xs:element minOccurs="0" name="Text" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:TextList" />
    <xs:element minOccurs="0" name="IDs" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:UniqueIDList" />
  </xs:sequence>
  <xs:attribute name="resultStatusFlag" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:ResultStatusFlag" />
  <xs:attribute name="code" type="xs:string" use="optional" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
resultStatusFlag	attribute	ResultStatusFlag	none	The result ( <i>SUCCESS</i> or <i>FAIL</i> ) of the operation
code	attribute	string	optional	Error code for failure condition.
Text	element	TextList	optional	Error text for failure condition.
IDs	element	UniqueIDList	optional	Activity ID from requesting system, and if successful, the paired           activity ID from the receiving system.

### 9.2.3 Sample Messages

## 9.3 Update Activity

The update activity message is used to modify an existing activity record in an external system. The requesting system submits an UpdateActivityRequest (ActivityRequest) message, and the responding system returns an UpdateActivityResponse (ActivityResponse). This message is equivalent to the Create Activity message, except that the receiving system may optionally return an error if the activity is not found. Alternatively, the receiving system may simply create the activity as if it was a new request.

<b>Port</b>	ActivityPortType

    </soap:Body>
</soap:Envelope>
```

#### 9.4 Cancel Activity

The cancel activity message is used to remove an existing activity record from an external system. The requesting system submits a CancelActivityRequest (ActivityRequest) message, and the responding system returns an CancelActivityResponse (ActivityResponse). This message is also equivalent to the Create Activity message, except that the Activity records defined in the ActivityList need only include minimal information to uniquely identify the item(s) to be cancelled.

<b>Port</b>	ActivityPortType
<b>Binding</b>	ActivityBinding
<b>Operation</b>	CancelActivity
<b>Soap Action</b>	http://htng.org/PWS/2008B/SingleGuestItinerary#CancelActivity
<b>Input</b>	CancelActivityRequest
<b>Output</b>	CancelActivityResponse

<b>Primary Schema</b>	Activity.xsd
<b>Role(s) Implemented</b>	Itinerary Consolidation System, Activity Reservation System

## Chapter 10 Activity Provider Port Type

The Activity Provider Port defines two functions which are implemented only by the Activity Reservation System. These are:

- **OutOfScopeNotification** – Function to notify the Activity Reservation System of a change in scope for a scheduled activity.
- **FetchActivities** – Function to fetch a set of activities for a specific guest profile or reservation.

### 10.1 Out of Scope Notification

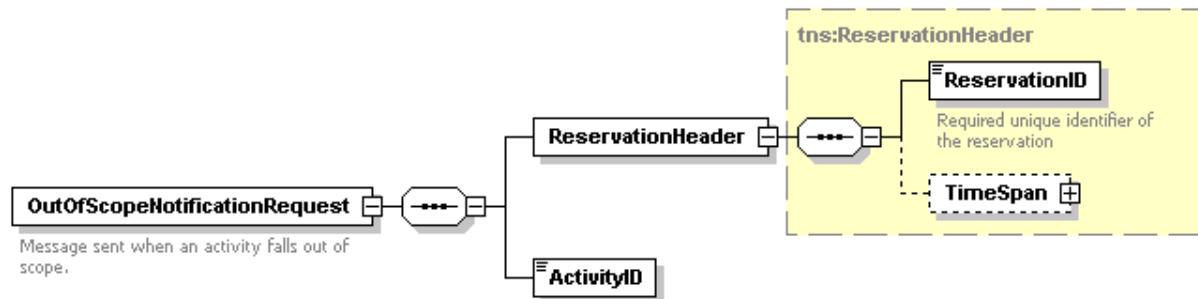

The Out of Scope Notification is a message designed primarily to inform the Activity Reservation System of a change in scope for a guest reservation to which an activity is linked. For instance, if an activity is linked to a guest reservation in the Accommodation Reservation System, and the reservation is cancelled, the Activity Reservation System should be notified as such. Furthermore, if a reservation date span is changed that formerly included an activity; the Activity Reservation System would likely need to be notified.

Notification is not required by the Accommodation Reservation System for a change in reservation scope. There are typically three possible actions: Request cancellation in the Activity Reservation System, notify the Activity Reservation System, or take no action.

The choice is typically a business operational policy, and is therefore often provided as a configuration option within the Accommodation Reservation System.

<b>Port</b>	ActivityProviderPortType
<b>Binding</b>	ActivityProviderBinding
<b>Operation</b>	OutOfScopeNotification
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#OutOfScopeNotification">http://htng.org/PWS/2008B/SingleGuestItinerary#OutOfScopeNotification</a>
<b>Input</b>	OutOfScopeNotificationRequest
<b>Output</b>	OutOfScopeNotificationResponse
<b>Primary Schema</b>	Activity.xsd
<b>Role(s) Implemented</b>	Activity Reservation System

### 10.1.1 OutOfScopeNotificationRequest

```

<xs:element name="OutOfScopeNotificationRequest">
  <xs:annotation>
    <xs:documentation>Message sent when an activity falls out of scope.</xs:documentation>
  </xs:annotation>
  <xs:complexType>
    <xs:sequence>
      <xs:element name="ReservationHeader">
        <xs:complexType>
          <xs:complexContent mixed="false">
            <xs:extension xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" base="q1:ReservationHeader">
              <xs:attribute name="reservationStatus" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:ReservationStatusType" use="optional" />
              <xs:attribute name="otherReservationStatus" type="xs:string" use="optional" />
            </xs:extension>
          </xs:complexContent>
        </xs:complexType>
      </xs:element>
      <xs:element name="ActivityID" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:UniqueID" />
    </xs:sequence>
    <xs:attribute name="outOfScopeAction" xmlns:q4="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" type="q4:OutOfScopeActionType" use="required" />
    <xs:attribute name="otherOutOfScopeAction" type="xs:string" use="optional" />
  </xs:complexType>
</xs:element>

```

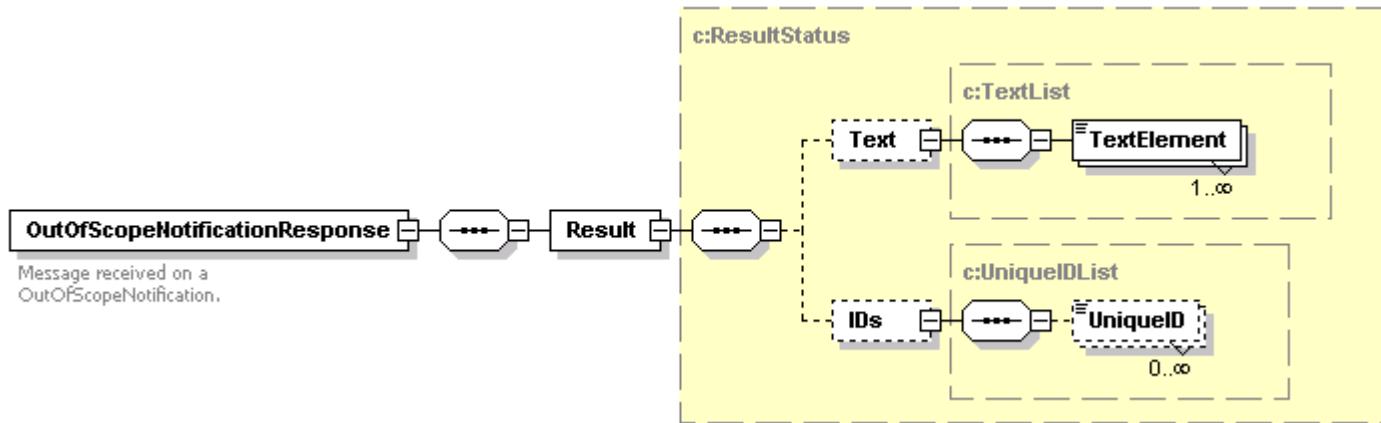

Name	Type	Data Type	Use	Comments
outOfScopeAction	attribute	OutOfScopeActionType	required	<i>RELEASE, BREAK, NOTIFICATION, or OTHER.</i> <i>RELEASE</i> is used to request that the activity be deleted. <i>NOTIFICATION</i> is sent to indicate a notification only. The remaining two values are not currently defined.
otherOutOfScopeAction	attribute	string	optional	Not used.
ReservationHeader	element		required	Identifies the guest's reservation applicable to the notification.
ActivityID	element	UniqueID	required	Identifies the scheduled activity related to the notification.

### 10.1.1.1 ReservationHeader

```
<xs:complexType name="ReservationHeader">
  <xs:annotation>
    <xs:documentation>Used to uniquely identify a reservation using it's internal ID, it's begin date and duration or end date.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element name="ReservationID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueId">
      <xs:annotation>
        <xs:documentation>Required unique identifier of the reservation</xs:documentation>
      </xs:annotation>
    </xs:element>
    <xs:element minOccurs="0" name="TimeSpan" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:TimeSpan" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
ReservationID	element	UniqueId	required	The reservation ID, as defined by the notifying system.
TimeSpan	element	TimeSpan	optional	The time span of the reservation.

### 10.1.2 OutOfScopeNotificationResponse

```
<xs:element name="OutOfScopeNotificationResponse">
  <xs:annotation>
    <xs:documentation>Message received on a OutOfScopeNotification.</xs:documentation>
  </xs:annotation>
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	The result from the notification. No action is typically required on the result object by the initiating system.

### 10.1.3 Sample Messages

#### [Request]

## 10.2 Fetch Activities

The Fetch Activities message is provided by the Activity Reservation System in order for an external system (typically the Activity Consolidation System) to query all scheduled activities for a particular guest. The request includes a choice element either indicating a guest profile ID or reservation ID, as defined in the receiving system.

<b>Port</b>	ActivityProviderPortType
<b>Binding</b>	ActivityProviderBinding
<b>Operation</b>	FetchActivities
<b>Soap Action</b>	http://htng.org/PWS/2008B/SingleGuestItinerary#FetchActivities
<b>Input</b>	FetchActivitiesRequest
<b>Output</b>	FetchActivitiesResponse
<b>Primary Schema</b>	Activity.xsd
<b>Role(s) Implemented</b>	Activity Reservation System

#### 10.2.1 FetchActivitiesRequest

```

<xs:element name="FetchActivitiesRequest">
  <xs:annotation>
    <xs:documentation>Message sent when requesting activities.</xs:documentation>
  </xs:annotation>
  <xs:complexType>
    <xs:choice>
      <xs:annotation>
        <xs:documentation xml:lang="en">The choice between a reservation header or a profile ID. One or the other is required. The system on the other end, will return either activities belonging to the reservation or profile.</xs:documentation>
      </xs:annotation>
      <xs:element name="ReservationHeader" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" type="q1:ReservationHeader" />
      <xs:element name="ProfileID" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:UniqueId" />
    </xs:choice>
  </xs:complexType>
</xs:element>

```

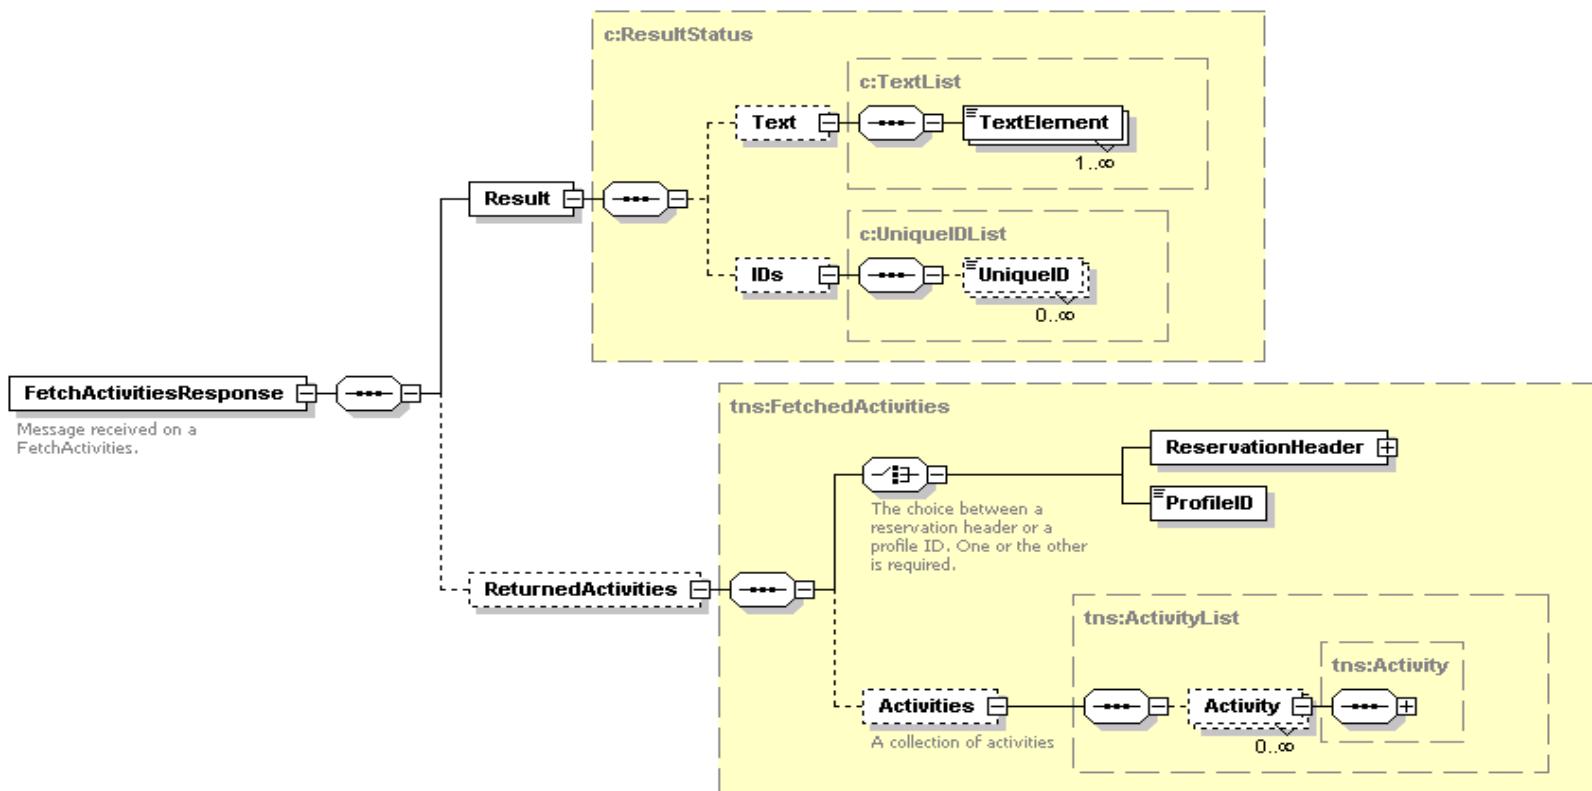

Name	Type	Data Type	Use	Comments
ReservationHeader	element	ReservationHeader	required	Identifies the reservation to fetch activities for. Either this element or the ProfileID must be sent.
ProfileID	element	UniqueID	required	Identifies the guest profile ID to fetch activities for. Either this element or the ReservationHeader must be sent.

#### 10.2.1.1 ReservationHeader

```
<xs:complexType name="ReservationHeader">
  <xs:annotation>
    <xs:documentation>Used to uniquely identify a reservation using its internal ID, its begin date and duration or end date.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element name="ReservationID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueID">
      <xs:annotation>
        <xs:documentation>Required unique identifier of the reservation</xs:documentation>
      </xs:annotation>
    </xs:element>
    <xs:element minOccurs="0" name="TimeSpan" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:TimeSpan" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
ReservationID	element	UniqueID	required	The ID, as defined in the receiving system.
TimeSpan	element	TimeSpan	optional	The date and duration of the reservation.

## 10.2.2 FetchActivitiesResponse

```

<xs:element name="FetchActivitiesResponse">
  <xs:annotation>
    <xs:documentation>Message received on a FetchActivities.</xs:documentation>
  </xs:annotation>
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
      <xs:element minOccurs="0" name="ReturnedActivities" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" type="q2:FetchedActivities" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	The result of the operation.

ReturnedActivities	element	FetchedActivities	optional	A list of activities for the requested guest or reservation.
--------------------	---------	-------------------	----------	--

#### 10.2.2.1 FetchedActivities

```
<xs:complexType name="FetchedActivities">
  <xs:annotation>
    <xs:documentation>Contains either a reservation header or ProfileID, indicating the owner, plus a collection of activities.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:choice>
      <xs:annotation>
        <xs:documentation xml:lang="en">The choice between a reservation header or a profile ID. One or the other is required.</xs:documentation>
      </xs:annotation>
      <xs:element name="ReservationHeader" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" type="q1:ReservationHeader" />
      <xs:element name="ProfileID" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:UniqueID" />
    </xs:choice>
    <xs:element minOccurs="0" name="Activities" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" type="q3:ActivityList">
      <xs:annotation>
        <xs:documentation>A collection of activities</xs:documentation>
      </xs:annotation>
    </xs:element>
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
ReservationHeader	element	ReservationHeader	required	The reservation header (if sent in the request).
ProfileID	element	UniqueID	required	The profile ID (if send in the request).
Activities	element	ActivityList	optional	A collection of Activity records.

## Chapter 11 Activity Sync Port Type

The Activity Sync port defines a single function which may be called from the Activity Reservation System in order to notify the Itinerary Consolidation System of a change in the location of an activity.

- **LocationNotification** – Function called from the Activity Reservation System in order to notify a change in the location for a scheduled activity.

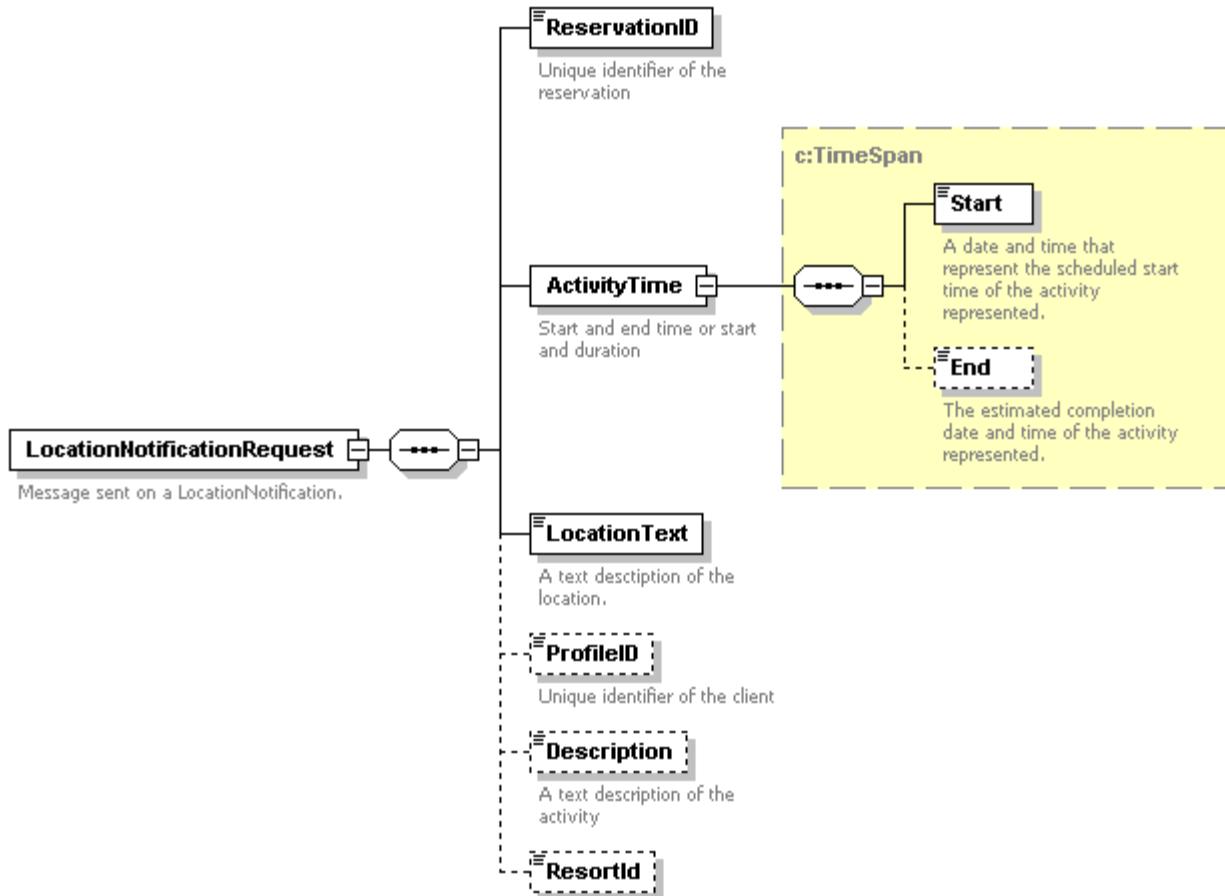

### 11.1 Location Notification

A Location Notification message is submitted by the Activity Reservation System in order to notify the Accommodation Reservation System of a guest's current physical location. Some reservation systems implement this feature in order to locate a guest in order to forward phone calls or deliver messages.

<b>Port</b>	ActivitySyncPortType
<b>Binding</b>	ActivitySyncBinding
<b>Operation</b>	ActivityLookup
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#LocationNotification">http://htng.org/PWS/2008B/SingleGuestItinerary#LocationNotification</a>
<b>Input</b>	LocationNotificationRequest
<b>Output</b>	LocationNotificationResponse
<b>Primary Schema</b>	Activity.xsd
<b>Role(s) Implemented</b>	Itinerary Consolidation System

### 11.1.1 LocationNotificationRequest

```
<xs:element name="LocationNotificationRequest">
  <xs:annotation>

  </xs:annotation>
  <xs:complexType>
    <xs:sequence>
      <xs:element name="ReservationID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueID">
        <xs:annotation>
          <xs:documentation>Unique identifier of the reservation</xs:documentation>
        </xs:annotation>
      </xs:element>
      <xs:element name="ActivityTime" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:TimeSpan">
```

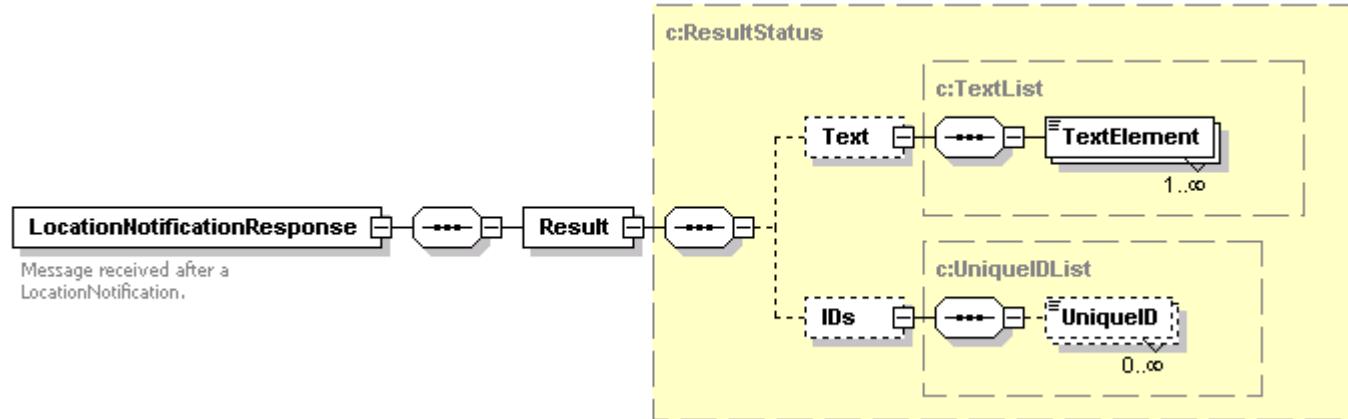

```

<xs:annotation>
<xs:documentation>Start and end time or start and duration</xs:documentation>
</xs:annotation>
</xs:element>
<xs:element name="LocationText" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:Text">
<xs:annotation>
<xs:documentation>A text description of the location.</xs:documentation>
</xs:annotation>
</xs:element>
<xs:element minOccurs="0" name="ProfileID" xmlns:q4="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q4:UniqueID">
<xs:annotation>
<xs:documentation>Unique identifier of the client</xs:documentation>
</xs:annotation>
</xs:element>
<xs:element minOccurs="0" name="Description" xmlns:q5="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q5:Text">
<xs:annotation>
<xs:documentation>A text description of the activity</xs:documentation>
</xs:annotation>
</xs:element>
<xs:element minOccurs="0" name="ResortId" type="xs:string" />
</xs:sequence>
<xs:attribute name="locationNotificationStatus" xmlns:q6="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types"
type="q6:LocationNotificationStatus" use="required" />
<xs:attribute name="otherLocationNotificationStatus" type="xs:string" use="optional" />
</xs:complexType>
</xs:element>

```

Name	Type	Data Type	Use	Comments
locationNotificationStatus	attribute	LocationNotificationStatus	required	The options are either <i>SET</i> , <i>CLEAR</i> , or <i>OTHER</i> .
otherLocationNotificationStatus	attribute	string	optional	Not currently used.
ReservationID	element	UniqueID	required	The reservation ID, as defined in the receiving system.
ActivityTime	element	TimeSpan	required	The activity time.
LocationText	element	Text	required	A description of the guest's location.
ProfileID	element	UniqueID	optional	The ID of the guest record, as defined in the receiving system.
Description	element	Text	optional	The description of the activity.
ResortId	element	string	optional	The property ID.

### 11.1.2 LocationNotificationResponse

```

<xsd:element name="LocationNotificationResponse">
  <xsd:annotation>
    <xsd:documentation>Message received after a LocationNotification.</xsd:documentation>
  </xsd:annotation>
  <xsd:complexType>
    <xsd:sequence>
      <xsd:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
    </xsd:sequence>
  </xsd:complexType>
</xsd:element>
  
```

Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	The result of the notification.

## Chapter 12 Name Port Type

The Name Port Type defines five functions which provide support for guest profile-related operations. In order for notification messages to occur within the interface, a link is typically established for specific guest profile records in both systems. The Name Port includes functions to provide this link. In addition, it is often desired that changes to linked profiles be notified from one (or multiple) systems to the others. The Name Port also provides the means to create a new profile in an external system.

- **FetchProfile** – Request to fetch information for a guest profile based on an external ID.
- **NewProfile** – This function may be used to create a new profile in an external system.
- **UpdateProfile** – This function is used to notify an external system when a linked profile is changed.
- **ProfileLookup** – The profile lookup function provides for a generic lookup against several filters.
- **Subscription** – This function is provided for notification back to an external system of the internal ID for a newly created guest profile record.

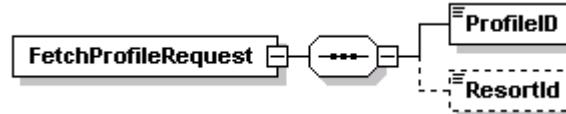

### 12.1 Fetch Profile

The fetch profile message is sent in order to request guest details for a specific ID, as defined in the external (receiving) system.

<b>Port</b>	NamePortType
<b>Binding</b>	NameBinding
<b>Operation</b>	FetchProfile
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#FetchProfile">http://htng.org/PWS/2008B/SingleGuestItinerary#FetchProfile</a>

<b>Input</b>	FetchProfileRequest
<b>Output</b>	FetchProfileResponse
<b>Primary Schema</b>	Name.xsd
<b>Role(s) Implemented</b>	Customer Profile System, Activity Reservation System

### 12.1.1 FetchProfileRequest

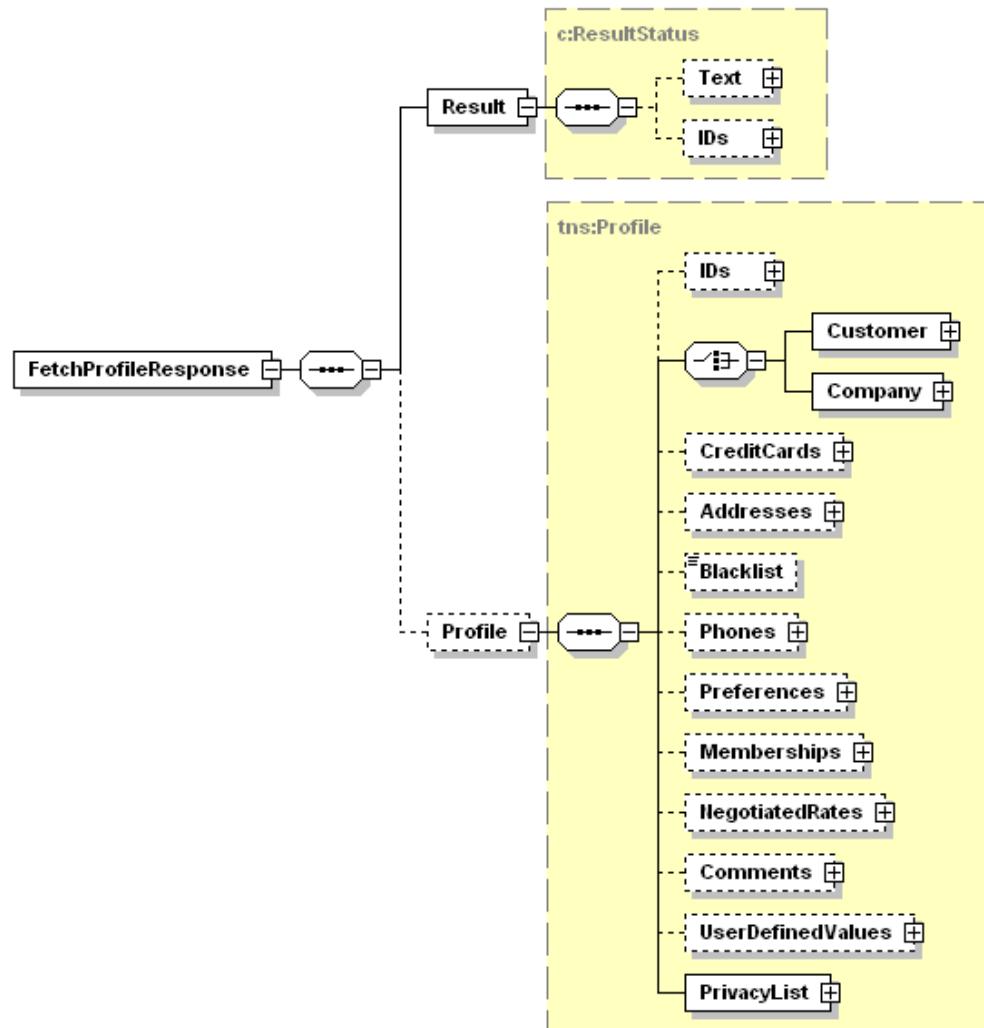

```
<xs:element name="FetchProfileRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="ProfileID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueID" />
      <xs:element minOccurs="0" name="ResortId" type="xs:string" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
ProfileID	element	UniqueID	required	The guest profile ID, as defined in the receiving system.
ResortId	element	string	optional	The property the guest is associated with. This field is not required.

### 12.1.2

#### FetchProfileResponse

```
<xs:element name="FetchProfileResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
      <xs:element minOccurs="0" name="Profile" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q2:Profile" />
    </xs:sequence>
  </xs:complexType>
```

</xs:element>				
Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	The result of the operation.
Profile	element	Profile	optional	Guest profile details.

### 12.1.3 Sample Messages

## 12.2 New Profile

A system may create a new guest profile record in an external system by calling the new profile function.

<b>Port</b>	NamePortType
<b>Binding</b>	NameBinding
<b>Operation</b>	NewProfile
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#NewProfile">http://htng.org/PWS/2008B/SingleGuestItinerary#NewProfile</a>
<b>Input</b>	NewProfileRequest
<b>Output</b>	NewProfileResponse
<b>Primary Schema</b>	Name.xsd

Role(s) Implemented	Customer Profile System, Activity Reservation System
---------------------	--

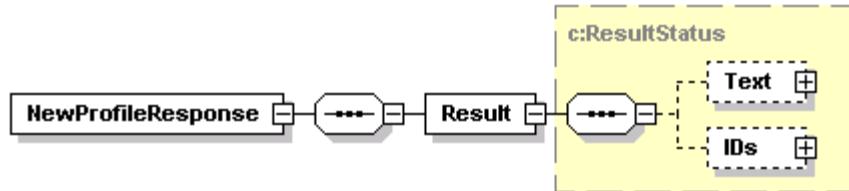

12.2.1      **NewProfileRequest**

```
<xs:element name="NewProfileRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Profile" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q1:Profile" />
      <xs:element minOccurs="0" name="ResortId" type="xs:string" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

</xs:element>				
Name	Type	Data Type	Use	Comments
Profile	element	Profile	required	The profile record to create.
ResortId	element	string	optional	The property associated with the profile.

### 12.2.2 NewProfileResponse

```

<xs:element name="NewProfileResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	The result of the operation.

### 12.2.3 Sample Messages

## 12.3 Update Profile

When a linked profile is changed in one system, an update profile message should be sent in order to notify all other systems of the modified record. While there may be a business practice enforced whereby updates are only made in one direction, both systems should be able to accept this message.

<b>Port</b>	NamePortType
<b>Binding</b>	NameBinding
<b>Operation</b>	UpdateProfile
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#UpdateProfile">http://htng.org/PWS/2008B/SingleGuestItinerary#UpdateProfile</a>
<b>Input</b>	UpdateProfileRequest
<b>Output</b>	UpdateProfileResponse
<b>Primary Schema</b>	Name.xsd
<b>Role(s) Implemented</b>	Customer Profile System, Activity Reservation System

12.3.1

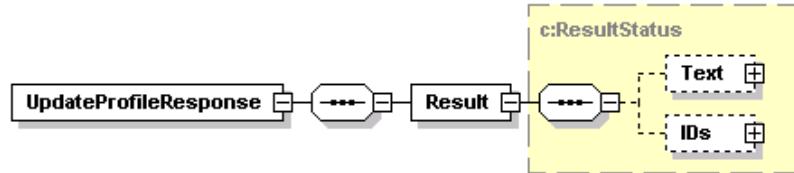

### UpdateProfileRequest

```
<xs:element name="UpdateProfileRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Profile" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q1:Profile" />
      <xs:element minOccurs="0" name="ResortId" type="xs:string" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
Profile	element	Profile	required	The profile record to update. This is a full overlay update.
ResortId	element	string	optional	The property the profile is associated with.

### 12.3.2 UpdateProfileResponse

```

<xs:element name="UpdateProfileResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	The result of the update.

## 12.4 Profile Lookup

The profile lookup message may be used in order to request a list of guest records which match a particular set of criteria.

<b>Port</b>	NamePortType
<b>Binding</b>	NameBinding
<b>Operation</b>	ProfileLookup
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#ProfileLookup">http://htng.org/PWS/2008B/SingleGuestItinerary#ProfileLookup</a>
<b>Input</b>	ProfileLookupRequest
<b>Output</b>	ProfileLookupResponse
<b>Primary Schema</b>	Name.xsd
<b>Role(s) Implemented</b>	Customer Profile System, Activity Reservation System

### 12.4.1 LookupRequest

```
<xs:element name="LookupRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Lookup" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q1:ProfileLookup" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

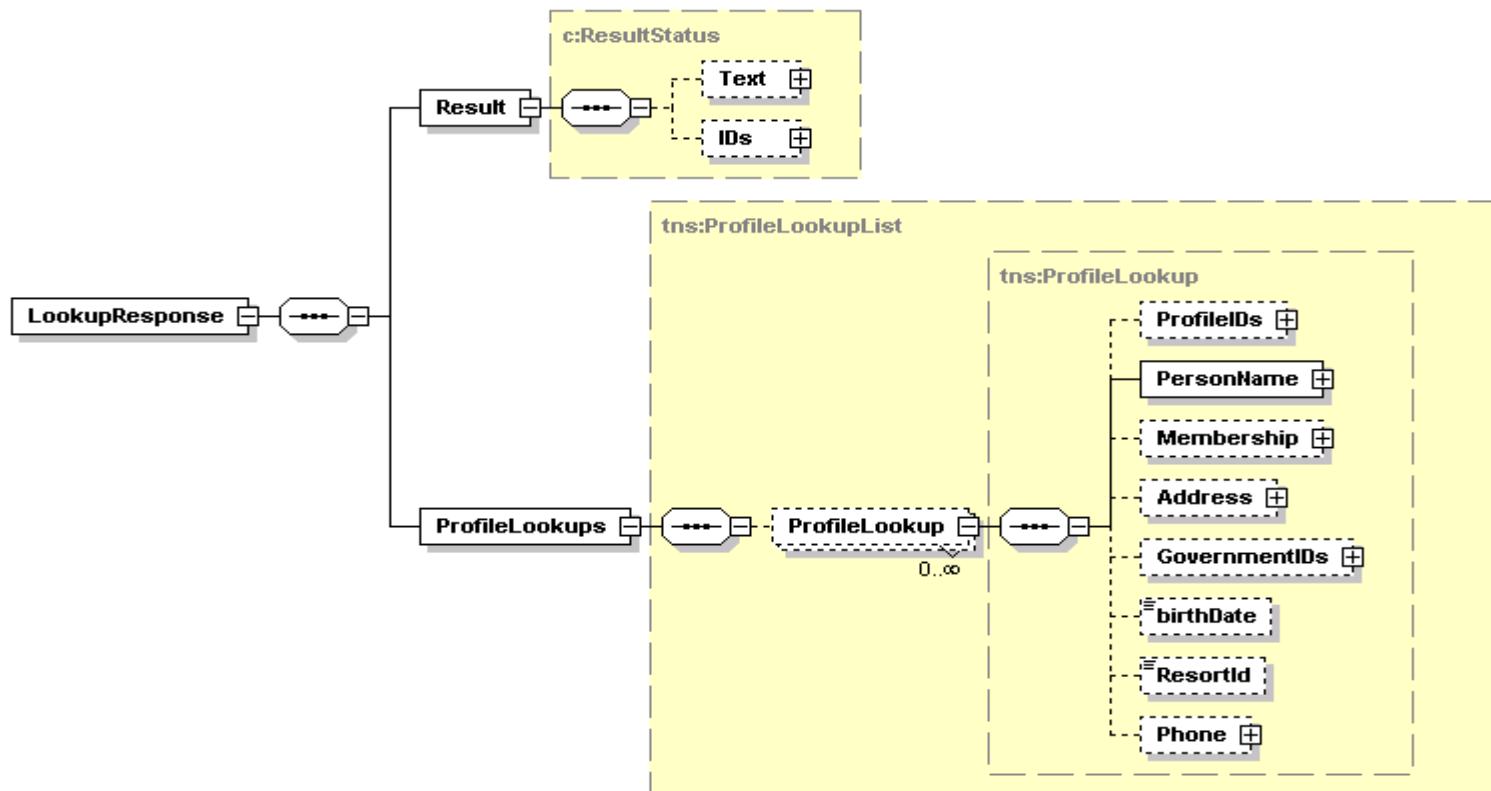

Name	Type	Data Type	Use	Comments
Lookup	element	ProfileLookup	required	The lookup filter to apply.

#### 12.4.1.1 ProfileLookup

```
<xs:complexType name="ProfileLookup">
  <xs:sequence>
    <xs:element minOccurs="0" name="ProfileIDs" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueIDList" />
    <xs:element name="PersonName" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:PersonName" />
    <xs:element minOccurs="0" name="Membership" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:Membership" />
    <xs:element minOccurs="0" name="Address" xmlns:q4="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q4:Address" />
    <xs:element minOccurs="0" name="GovernmentIDs" xmlns:q5="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types"
      type="q5:GovernmentIDList" />
    <xs:element minOccurs="0" name="birthDate" type="xs:date" />
    <xs:element minOccurs="0" name="ResortId" type="xs:string" />
    <xs:element minOccurs="0" name="Phone" xmlns:q6="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q6:Phone" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
ProfileIDs	element	UniqueIDList	optional	A list of IDs to lookup. The receiving system is only required to honor the first value in the list.
PersonName	element	PersonName	required	A filter for an individual's name. The receiving system is only required to lookup by last and first name.
Membership	element	Membership	optional	Membership values to lookup. The receiving system is not required to honor this filter.
Address	element	Address	optional	Address values to lookup. The receiving system can use discretion in applying various components this filter.
GovernmentIDs	element	GovernmentIDList	optional	Government ID lookup values. The receiving system is not required to honor this filter.
birthDate	element	date	optional	Birth date. The receiving system is not required to apply this filter.
ResortId	element	string	optional	The property code.
Phone	element	Phone	optional	A telephone filter. The receiving system is not required to apply this filter.

#### 12.4.2 LookupResponse

```

<xs:element name="LookupResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
      <xs:element name="ProfileLookups" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q2:ProfileLookupList" />
    </xs:sequence>
  </xs:complexType>
</xs:element>

```

Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	The result of the operation.
ProfileLookups	element	ProfileLookupList	required	A list of matching profiles.

#### 12.4.2.1 ProfileLookupList

```
<xs:complexType name="ProfileLookupList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="ProfileLookup" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types"
      type="q1:ProfileLookup" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
ProfileLookup	element	ProfileLookup	optional/multiple	A collection of profile lookup elements.

#### 12.4.2.2 ProfileLookup

```
<xs:complexType name="ProfileLookup">
  <xs:sequence>
    <xs:element minOccurs="0" name="ProfileIDs" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueIDList" />
    <xs:element name="PersonName" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:PersonName" />
    <xs:element minOccurs="0" name="Membership" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:Membership" />
    <xs:element minOccurs="0" name="Address" xmlns:q4="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q4:Address" />
    <xs:element minOccurs="0" name="GovernmentIDs" xmlns:q5="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types"
      type="q5:GovernmentIDList" />
    <xs:element minOccurs="0" name="birthDate" type="xs:date" />
    <xs:element minOccurs="0" name="ResortId" type="xs:string" />
    <xs:element minOccurs="0" name="Phone" xmlns:q6="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q6:Phone" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
ProfileIDs	element	UniqueIDList	optional	The guest record ID.
PersonName	element	PersonName	required	The guest name.
Membership	element	Membership	optional	The guest primary membership record.
Address	element	Address	optional	The guest primary address.
GovernmentIDs	element	GovernmentIDList	optional	A collection of government IDs.
birthDate	element	date	optional	The guest's birth date.
ResortId	element	string	optional	The associated property.
Phone	element	Phone	optional	The guest primary telephone.

## 12.5 Subscription

A subscription message is sent to notify an external system, after a new profile has been created, of the internal ID for the new record. The typical scenario consists of a sequence of three actions: a profile lookup, a profile fetch, and a subscription. Often, when a profile is fetched from an external system, it does not exist in the requesting system and must be created. The subscription record is a notification back to the other system of the record ID for the newly created guest record. While the requesting system would have both IDs, the external system would otherwise not be aware of the profile link.

<b>Port</b>	NamePortType
<b>Binding</b>	NameBinding
<b>Operation</b>	Subscription
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#Subscription">http://htng.org/PWS/2008B/SingleGuestItinerary#Subscription</a>
<b>Input</b>	SubscriptionRequest
<b>Output</b>	SubscriptionResponse
<b>Primary Schema</b>	Name.xsd
<b>Role(s) Implemented</b>	Customer Profile System, Activity Reservation System

### 12.5.1 SubscriptionRequest

```

<xs:element name="SubscriptionRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Subscription" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q1:Subscription" />
      <xs:element minOccurs="0" name="ResortId" type="xs:string" />
    </xs:sequence>
  </xs:complexType>
</xs:element>

```

Name	Type	Data Type	Use	Comments
Subscription	element	Subscription	required	A matched pair of external and internal ID values.
ResortId	element	string	optional	The associated property code.

#### 12.5.1.1 Subscription

```

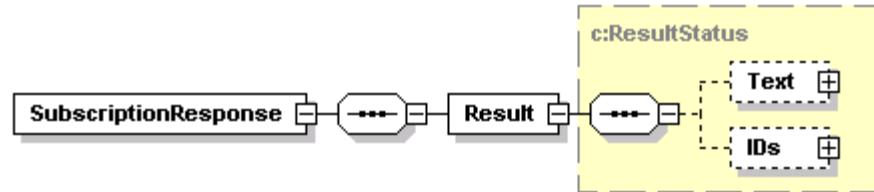

<xs:complexType name="Subscription">
  <xs:sequence>
    <xs:element name="ProfileIDs" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueIDList" />
  </xs:sequence>
  <xs:attribute name="subscriptionAction" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:SubscriptionAction" use="required" />
  <xs:attribute name="otherSubscriptionAction" type="xs:string" />
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
subscriptionAction	attribute	SubscriptionAction	required	One of <i>OTHER</i> , <i>SUBSCRIBE</i> , or <i>UNSUBSCRIBE</i> .
otherSubscriptionAction	attribute	string	none	Not used.
ProfileIDs	element	UniqueIDList	required	A matched pair of internal and external guest record IDs.

### 12.5.2

#### SubscriptionResponse

```
<xs:element name="SubscriptionResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	The result of the subscription.

### 12.5.3

## 12.6 Merge Profile

A merge profile message is sent to notify an external system that two (or more) profiles have been merged into one. Occasionally, multiple profile records may be created for the same individual. When these are merged in one system, the external system should be notified of the combination.

<b>Port</b>	NamePortType
<b>Binding</b>	NameBinding
<b>Operation</b>	MergeProfile
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#MergeProfile">http://htng.org/PWS/2008B/SingleGuestItinerary#MergeProfile</a>
<b>Input</b>	MergeProfileRequest
<b>Output</b>	MergeProfileResponse
<b>Primary Schema</b>	Name.xsd
<b>Role(s) Implemented</b>	Customer Profile System, Activity Reservation System

### 12.6.1 MergeProfileRequest

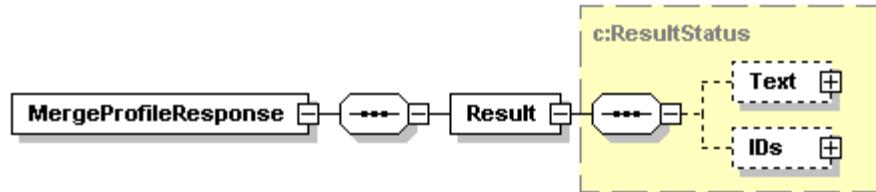

```

<xs:element name="MergeProfileRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="TargetIDs" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueIDList" />
      <xs:element name="SourceIDs" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:UniqueIDList" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

Name	Type	Data Type	Use	Comments
TargetIDs	element	UniqueIDList	required	The ID(s) of the surviving profile record.
SourceIDs	element	UniqueIDList	required	The ID(s) of the profile records to be merged.

## 12.6.2 MergeProfileResponse

### MergeProfileResponse

```
<xs:element name="MergeProfileResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	The result of the merge.

## 12.6.3 Sample Messages

## Chapter 13 Reservation Provider Port Type

The Reservation Provider Port consists of four functions related to a guest reservation in an Accommodation Reservation System. The functions provide the means to lookup a reservation based on various filters, fetch reservation details, and post payments to a reservation.

- **ReservationLookup** – Request a list of guest reservations with match one or more input filters.
- **FetchReservation** – Fetch details for a guest reservation.
- **PostPayment** – Post a payment to a guest reservation.
- **GuestMessage** – Submit a message to be delivered to a guest and provide notification.

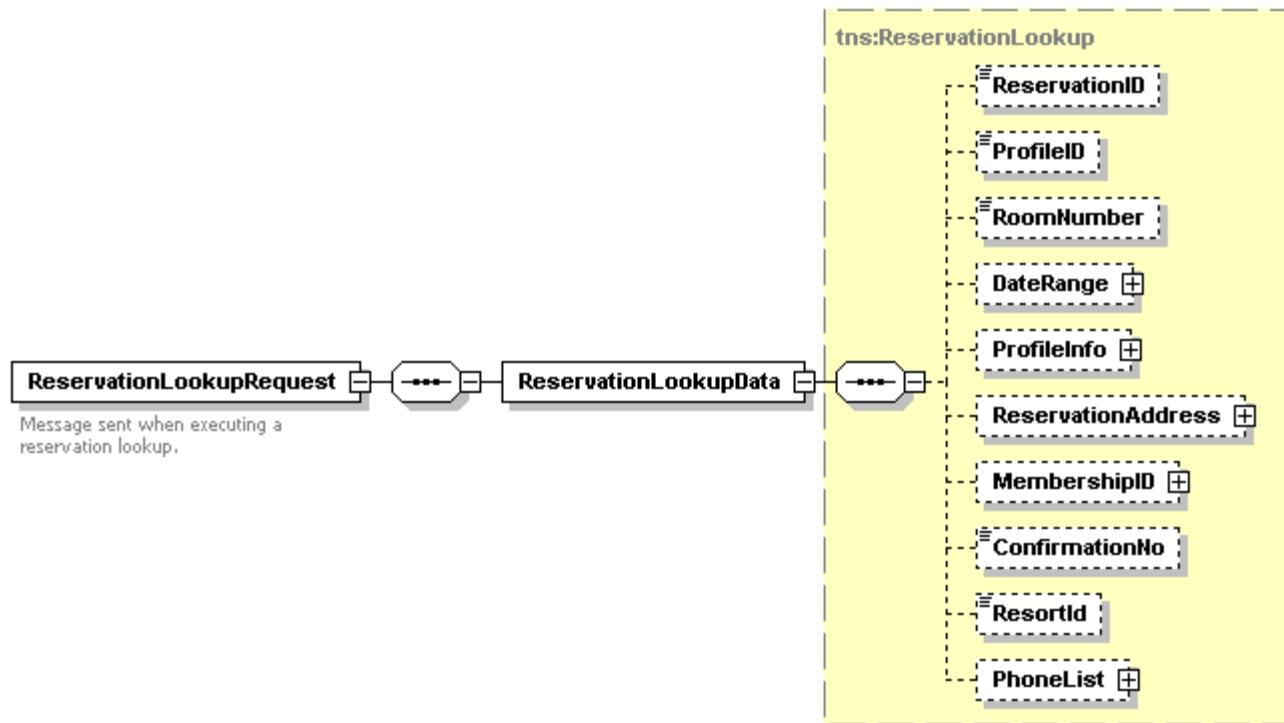

### 13.1 Reservation Lookup

The Accommodation Reservation System provides the reservation lookup message in order to request a list of guest reservations matching a specified set of criteria. This is often used by the Activity Reservation System to look up a guest record by room number or confirmation number.

<b>Port</b>	ReservationProviderPortType
<b>Binding</b>	ReservationProviderBinding
<b>Operation</b>	ReservationLookup
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#ReservationLookup">http://htng.org/PWS/2008B/SingleGuestItinerary#ReservationLookup</a>
<b>Input</b>	ReservationLookupRequest
<b>Output</b>	ReservationLookupResponse
<b>Primary Schema</b>	Reservation.xsd
<b>Role(s) Implemented</b>	Accommodation Reservation System

### 13.1.1 ReservationLookupRequest

```
<xs:element name="ReservationLookupRequest">
  <xs:annotation>
    <xs:documentation>Message sent when executing a reservation lookup.</xs:documentation>
  </xs:annotation>
  <xs:complexType>
    <xs:sequence>
      <xs:element name="ReservationLookupData" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Reservation/Types"
        type="q1:ReservationLookup" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
ReservationLookupData	element	ReservationLookup	required	Reservation lookup filter data.

#### 13.1.1.1 ReservationLookup

```
<xs:complexType name="ReservationLookup">
  <xs:annotation>
```

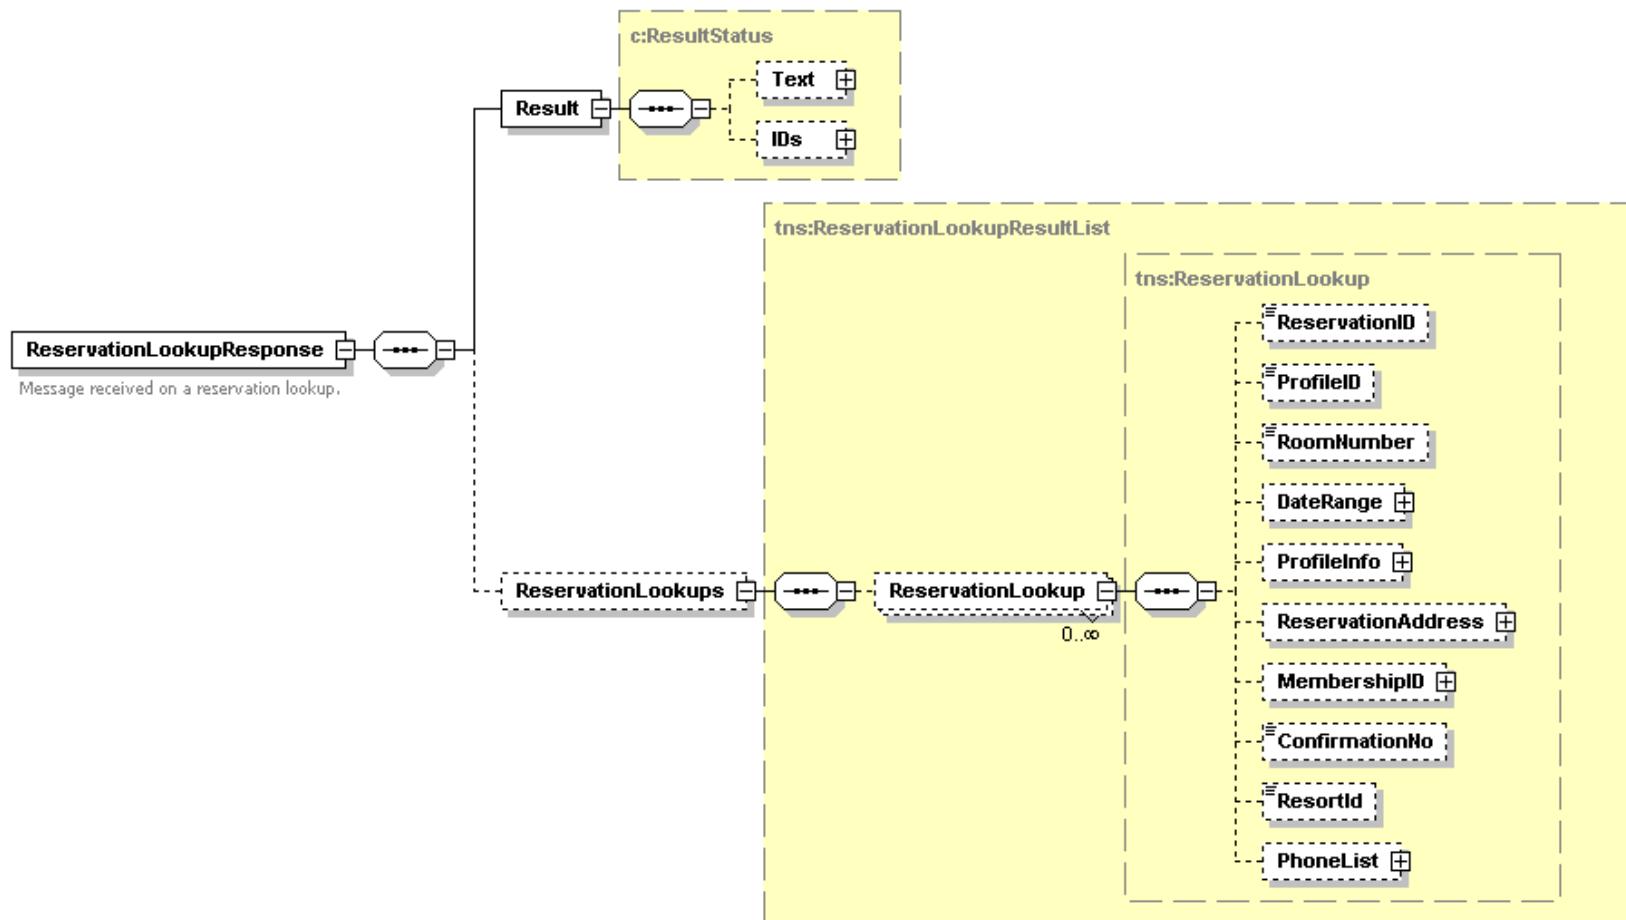

```

<xs:documentation>Defines the queried data when executing a reservation lookup.</xs:documentation>
</xs:annotation>
<xs:sequence>
  <xs:element minOccurs="0" name="ReservationID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueID" />
  <xs:element minOccurs="0" name="ProfileID" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:UniqueID" />
  <xs:element minOccurs="0" name="RoomNumber" type="xs:string" />
  <xs:element minOccurs="0" name="DateRange" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:TimeSpan" />
  <xs:element minOccurs="0" name="ProfileInfo" xmlns:q4="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q4:PersonName" />
  <xs:element minOccurs="0" name="ReservationAddress" xmlns:q5="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q5:Address" />
  <xs:element minOccurs="0" name="MembershipID" xmlns:q6="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q6:Membership" />
  <xs:element minOccurs="0" name="ConfirmationNo" type="xs:string" />
  <xs:element minOccurs="0" name="ResortId" type="xs:string" />
  <xs:element minOccurs="0" name="PhoneList" xmlns:q7="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q7:PhoneList" />
</xs:sequence>
<xs:attribute name="reservationStatus" xmlns:q8="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q8:ReservationStatusType" use="required" />
<xs:attribute name="otherReservationStatus" type="xs:string" use="optional" />
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
reservationStatus	attribute	ReservationStatusType	required	Status of reservation.
otherReservationStatus	attribute	string	optional	Not used.
ReservationID	element	UniqueID	optional	Lookup by reservation ID.
ProfileID	element	UniqueID	optional	Lookup by profile ID.
RoomNumber	element	string	optional	Lookup by room number.
DateRange	element	TimeSpan	optional	Lookup by date range.
ProfileInfo	element	PersonName	optional	Lookup by guest name.
ReservationAddress	element	Address	optional	Lookup by guest address.
MembershipID	element	Membership	optional	Lookup by guest membership.
ConfirmationNo	element	string	optional	Lookup by confirmation number.
ResortId	element	string	optional	Property code to lookup from.
PhoneList	element	PhoneList	optional	Lookup by phone number

### 13.1.2 ReservationLookupResponse

```
<xs:element name="ReservationLookupResponse">
  <xs:annotation>
    <xs:documentation>Message received on a reservation lookup.</xs:documentation>
  </xs:annotation>
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
      <xs:element minOccurs="0" name="ReservationLookups" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Reservation/Types"
        type="q2:ReservationLookupResultList" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

</xs:element>				
Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	Result of the lookup operation.
ReservationLookups	element	ReservationLookupResultList	optional	Collection of matching reservation summary records.

### 13.1.2.1 ReservationLookupResultList

```
<xs:complexType name="ReservationLookupResultList">
  <xs:annotation>
    <xs:documentation>Collection of reservation lookup results.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="ReservationLookup"
      xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Reservation/Types" type="q1:ReservationLookup" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
ReservationLookup	element	ReservationLookup	optional/ multiple	Collection of ReservationLookup elements.

### 13.1.2.2 ReservationLookup

```
<xs:complexType name="ReservationLookup">
  <xs:annotation>
    <xs:documentation>Defines the queried data when executing a reservation lookup.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element minOccurs="0" name="ReservationID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueID" />
    <xs:element minOccurs="0" name="ProfileID" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:UniqueID" />
    <xs:element minOccurs="0" name="RoomNumber" type="xs:string" />
    <xs:element minOccurs="0" name="DateRange" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:TimeSpan" />
    <xs:element minOccurs="0" name="ProfileInfo" xmlns:q4="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q4:PersonName" />
    <xs:element minOccurs="0" name="ReservationAddress" xmlns:q5="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q5:Address" />
    <xs:element minOccurs="0" name="MembershipID" xmlns:q6="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q6:Membership" />
    <xs:element minOccurs="0" name="ConfirmationNo" type="xs:string" />
    <xs:element minOccurs="0" name="ResortId" type="xs:string" />
    <xs:element minOccurs="0" name="PhoneList" xmlns:q7="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q7:PhoneList" />
  </xs:sequence>
  <xs:attribute name="reservationStatus" xmlns:q8="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q8:ReservationStatusType"
    use="required" />
  <xs:attribute name="otherReservationStatus" type="xs:string" use="optional" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
reservationStatus	attribute	ReservationStatusType	required	The reservation status.
otherReservationStatus	attribute	string	optional	Not used.
ReservationID	element	UniqueID	optional	The internal reservation ID from the message receiver.
ProfileID	element	UniqueID	optional	The internal guest record ID from the message receiver.
RoomNumber	element	string	optional	The guest room number.
DateRange	element	TimeSpan	optional	The guest arrival and departure dates.
ProfileInfo	element	PersonName	optional	The guest name.
ReservationAddress	element	Address	optional	The guest primary address.
MembershipID	element	Membership	optional	The guest primary membership.
ConfirmationNo	element	string	optional	The reservation confirmation number.
ResortId	element	string	optional	The property code.
PhoneList	element	PhoneList	optional	Guest phone numbers

## 13.2 Fetch Reservation

The fetch reservation message is used to request details for a particular reservation based on an associated ID defined within the receiving Accommodation Reservation System. In many instances, this request is made following a reservation lookup where one reservation is selected from the list provided.

<b>Port</b>	ReservationProviderPortType
<b>Binding</b>	ReservationProviderBinding
<b>Operation</b>	ReservationLookup
<b>Soap Action</b>	http://htng.org/PWS/2008B/SingleGuestItinerary#FetchReservation
<b>Input</b>	ReservationLookupRequest
<b>Output</b>	ReservationLookupResponse

<b>Primary Schema</b>	Reservation.xsd
<b>Role(s) Implemented</b>	Accommodation Reservation System

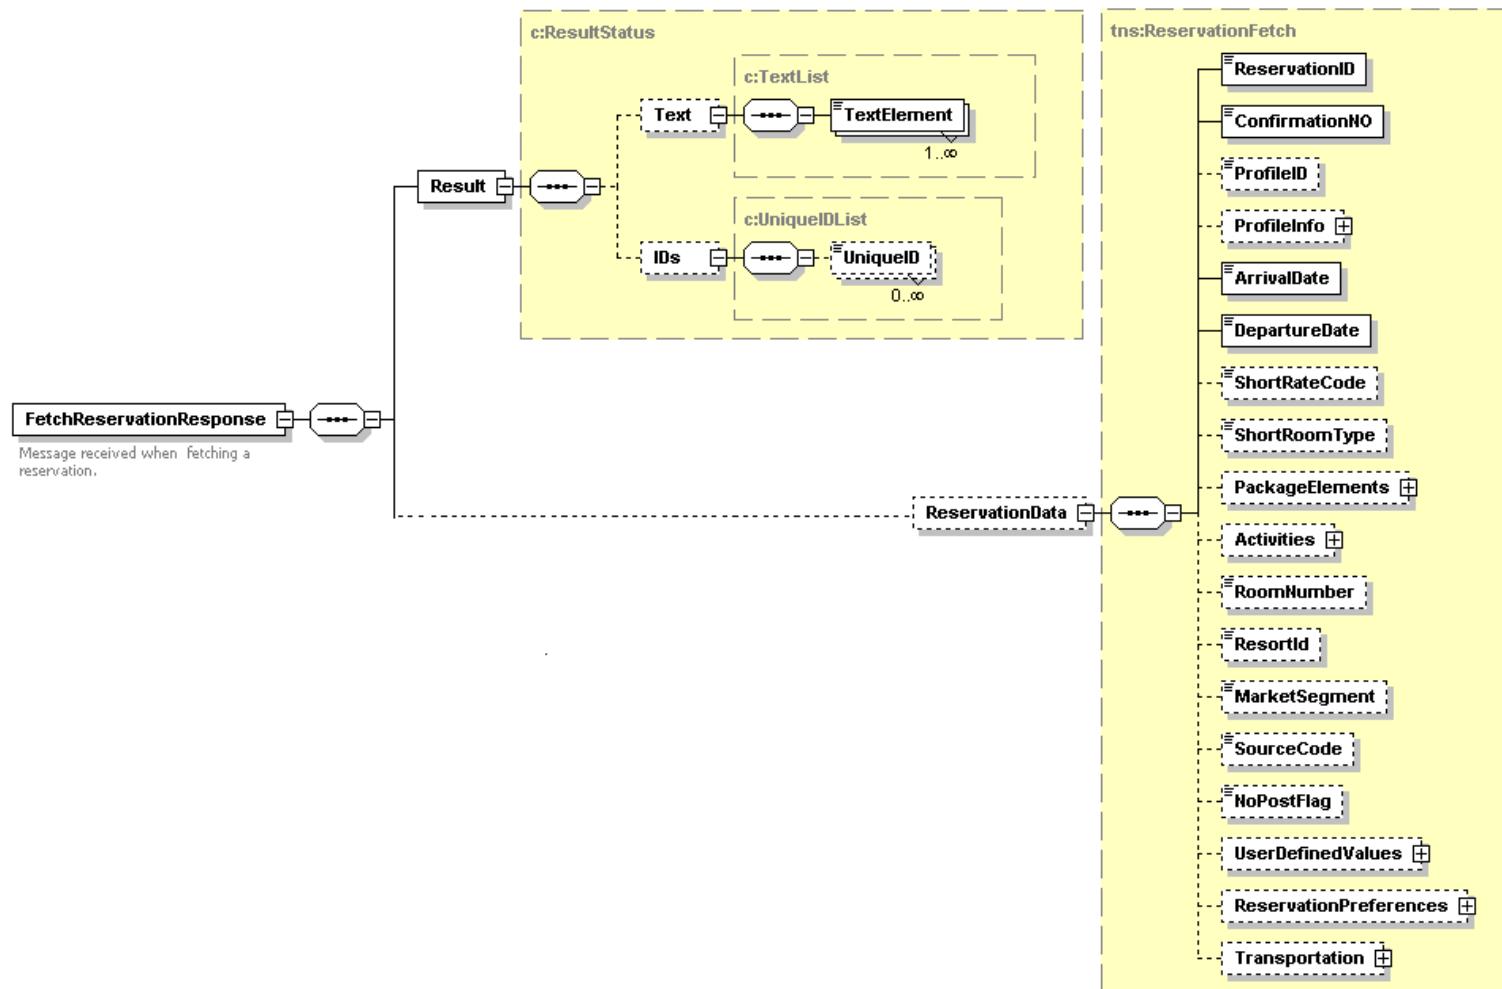

### 13.2.1 FetchReservationRequest

```
<xs:element name="FetchReservationRequest">
  <xs:annotation>
    <xs:documentation>Message sent when fetching a reservation.</xs:documentation>
  </xs:annotation>
  <xs:complexType>
    <xs:sequence>
      <xs:element name="ReservationID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueId" />
      <xs:element minOccurs="0" name="ResortId" type="xs:string" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
ReservationID	element	UniqueId	required	The reservation ID to fetch.
ResortId	element	string	optional	The property code.

### 13.2.2 FetchReservationResponse

```
<xs:element name="FetchReservationResponse">
  <xs:annotation>
    <xs:documentation>Message received when fetching a reservation.</xs:documentation>
  </xs:annotation>
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
      <xs:element minOccurs="0" name="ReservationData" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Reservation/Types" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

```

        type="q2:ReservationFetch" />
    </xs:sequence>
</xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	The result of the operation.
ReservationData	element	ReservationFetch	optional	Reservation details.

### 13.2.2.1 ReservationFetch

```

<xs:complexType name="ReservationFetch">
    <xs:annotation>
        <xs:documentation>Data returned when fetching a reservation.</xs:documentation>
    </xs:annotation>
    <xs:sequence>
        <xs:element name="ReservationID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueID" />
        <xs:element name="ConfirmationNO" type="xs:string" />
        <xs:element minOccurs="0" name="ProfileID" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:UniqueID" />
        <xs:element minOccurs="0" name="ProfileInfo" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:PersonName" />
        <xs:element name="ArrivalDate" type="xs:dateTime" />
        <xs:element name="DepartureDate" type="xs:dateTime" />
        <xs:element minOccurs="0" name="ShortRateCode" type="xs:string" />
        <xs:element minOccurs="0" name="ShortRoomType" type="xs:string" />
        <xs:element minOccurs="0" name="PackageElements" xmlns:q4="http://htng.org/PWS/2008B/SingleGuestItinerary/Reservation/Types"
            type="q4:PackageElementList" />
        <xs:element minOccurs="0" name="Activities" xmlns:q5="http://htng.org/PWS/2008B/SingleGuestItinerary/Activity/Types" type="q5:ActivityList" />
        <xs:element minOccurs="0" name="RoomNumber" type="xs:string" />
        <xs:element minOccurs="0" name="ResortId" type="xs:string" />
        <xs:element minOccurs="0" name="MarketSegment" type="xs:string" />
        <xs:element minOccurs="0" name="SourceCode" type="xs:string" />
        <xs:element minOccurs="0" name="NoPostFlag" type="xs:boolean" />
        <xs:element minOccurs="0" name="UserDefinedValues" xmlns:q6="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types"
            type="q6:UserDefinedValueList" />
        <xs:element minOccurs="0" name="ReservationPreferences" xmlns:q7="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types"
            type="q7:PreferenceList" />
        <xs:element minOccurs="0" name="Transportation" xmlns:q8="http://htng.org/PWS/2008B/SingleGuestItinerary/Reservation/Types"
            type="q8:TransportationList" />
    </xs:sequence>
    <xs:attribute name="reservationStatus" xmlns:q9="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q9:ReservationStatusType"
        use="required" />
    <xs:attribute name="otherReservationStatus" type="xs:string" use="optional" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
reservationStatus	attribute	ReservationStatusType	required	The reservation status.
otherReservationStatus	attribute	string	optional	Not used.
ReservationID	element	UniqueID	required	The internal reservation ID.

ConfirmationNO	element	string	required	The confirmation number.
ProfileID	element	UniqueID	optional	The primary guest profile ID.
ProfileInfo	element	PersonName	optional	The primary guest name.
ArrivalDate	element	dateTime	required	The arrival date.
DepartureDate	element	dateTime	required	The departure date.
ShortRateCode	element	string	optional	The reservatuib rate code.
ShortRoomType	element	string	optional	The room type description.
PackageElements	element	PackageElementList	optional	A collection of package elements.
Activities	element	ActivityList	optional	A collection of activities.
RoomNumber	element	string	optional	The room number.
ResortId	element	string	optional	The property code.
MarketSegment	element	string	optional	The market segment code.
SourceCode	element	string	optional	The source code.
NoPostFlag	element	boolean	optional	True or False.
UserDefinedValues	element	UserDefinedValueList	optional	A collection of user defined value elements.
ReservationPreferences	element	PreferenceList	optional	A collection of preferences attached to the reservation.
Transportation	element	TransportationList	optional	A collection of transportation elements for the reservation.

### 13.2.2.2 PackageElementList

```
<xs:complexType name="PackageElementList">
  <xs:annotation>
    <xs:documentation>A collection of packages attached to a reservation.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element maxOccurs="unbounded" name="PackageElement" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Reservation/Types"
      type="q1:PackageElement" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
PackageElement	element	PackageElement	required/ multiple	A collection of PackageElement records.

### 13.2.2.3 PackageElement

```
<xs:complexType name="PackageElement">
  <xs:annotation>
    <xs:documentation>Package data attached to a reservation.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
```

```
<xs:element name="ElementCode" type="xs:string" />
<xs:element name="ElementDescription" type="xs:string" />
</xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
ElementCode	element	string	required	Package element code.
ElementDescription	element	string	required	Package element description.

### 13.3 Post Payment

The post payment message is used to add a charge to the guest folio. This message is generated by a Posting System and sent to the Folio System. In many instances, the Posting System role is performed by the Activity Reservation System and the Folio System is actually handled by the Accommodation Reservation System. The requesting system sends a PostPayment (pmtpostingupdate) request, and receives back a PostPaymentResponse (pmtpostingresults) response message.

<b>Port</b>	ReservationProviderPortType
<b>Binding</b>	ReservationProviderBinding
<b>Operation</b>	PostPayment
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#PostPayment">http://htng.org/PWS/2008B/SingleGuestItinerary#PostPayment</a>
<b>Input</b>	PostPaymentRequest
<b>Output</b>	PostPaymentResponse
<b>Primary Schema</b>	PmtPosting.xsd
<b>Role(s) Implemented</b>	Folio System

Name	Type	Data Type	Use	Comments
Number	element		required	Identifies the account, room, unit, folio, or reservation to post the charge to. The context of the number is determined by the "Type" attribute, which is one of <i>unit</i> or <i>resno</i> .
ClientId	element	string	required	The ID from the requesting system.

PostingGUID	element	string	required	A unique identifier for the posting generated by the requesting system.
ZoomInKey	element	string	required	A key which can be used by the receiving system to acquire additional details for the posting.
AccountDetail	element	AccountDetailType	optional	A record which contains detailed account data such as a particular revenue bucket.
CreditCardDetail	element	CreditCardDetailType	optional	Credit card details.
VoidFlag	element	boolean	required	Flag to indicate refund (reversal) posting.
PostPropertyId	element	unsignedInt	required	Property code.
RegisterId	element	unsignedInt	required	Register ID.
CashierEmpId	element	unsignedLong	required	Cashier employee ID.
ServerEmpId	element	unsignedLong	required	Server employee ID.
RevenueCenterId	element	unsignedLong	required	Revenue center in the POS.
CheckNumber	element	unsignedInt	required	Check number.
Covers	element	int	required	The total number of guests on the check.
MealPeriod	element	unsignedInt	required	Meal period.
PaymentId	element	unsignedLong	required	Payment method ID.
TipAmount	element	int	required	Tip amount.
PaymentAmount	element	int	required	Total payment including tip.
CheckAmount	element	int	required	Check amount.
ResortId	element	string	required	Property ID.
Itemizers	element	ItemizersType	required	A list of financial classes, types, and amounts that represents the breakdown of the financial data for the transaction.
Extensions	element	ExtensionsType	optional	Optional system implemented data.

### 13.3.1.1 AccountDetailType

```

<xs:complexType name="AccountDetailType">
  <xs:annotation>
    <xs:documentation> Contains the details about the account to be used for posting the payment</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element name="Account" type="xs:string" />
    <xs:element name="Unit" type="xs:string" />
  </xs:sequence>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments

Account	element	string	required	Posting account number.
Unit	element	string	required	Room number.

### 13.3.1.2 CreditCardDetailType

```
<xs:complexType name="CreditCardDetailType">
  <xs:annotation>
    <xs:documentation>Holds credit card information</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element name="Account" type="xs:string" />
    <xs:element name="ExpireDate" type="xs:string" />
    <xs:element name="CVV2" type="xs:string" />
    <xs:element name="AuthCode" type="xs:string" />
    <xs:element name="CardSwipeTrack1" type="xs:string" />
    <xs:element name="CardSwipeTrack2" type="xs:string" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Account	element	string	required	Credit card account number.
ExpireDate	element	string	required	Expiration date in YYMM format.
CVV2	element	string	required	CVV2 data.
AuthCode	element	string	required	Authorization code from authorizing agency.
CardSwipeTrack1	element	string	required	MSR track 1 data.
CardSwipeTrack2	element	string	required	MSR track 2 data.

### 13.3.1.3 ItemizersType

```
<xs:complexType name="ItemizersType">
  <xs:sequence>
    <xs:element maxOccurs="unbounded" name="Itemizer" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/PaymentPosting/Types"
      type="q1:ItemizerType" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Itemizer	element	ItemizerType	required/multiple	A collection of itemizer records.

### 13.3.1.4 ItemizerType

```
<xs:complexType name="ItemizerType">
  <xs:simpleContent>
    <xs:extension base="xs:int">
      <xs:attribute name="class" use="required">
        <xs:simpleType>
```

```

<xs:restriction base="xs:NMTOKEN">
    <xs:enumeration value="discount" />
    <xs:enumeration value="gratuity" />
    <xs:enumeration value="sales" />
    <xs:enumeration value="serviceCharge" />
    <xs:enumeration value="tax" />
</xs:restriction>
</xs:simpleType>
</xs:attribute>
<xs:attribute name="id" type="xs:unsignedInt" use="required" />
<xs:attribute name="name" type="xs:string" use="required" />
</xs:extension>
</xs:simpleContent>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
ItemizerType	extension	int		The itemizer type.
class	attribute		required	The financial class. Valid values are <i>discount</i> , <i>gratuity</i> , <i>sales</i> , <i>serviceCharge</i> , and <i>tax</i> .
id	attribute	unsignedInt	required	The subtype within the class.
name	attribute	string	required	A description of the itemizer value.

### 13.3.1.5 ExtensionsType

```

<xs:complexType name="ExtensionsType">
    <xs:sequence>
        <xs:element maxOccurs="unbounded" name="Extension" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/PaymentPosting/Types"
                    type="q1:ExtensionType" />
    </xs:sequence>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
Extension	element	ExtensionType	required/multiple	A colelction of ExtensionType elements.

### 13.3.1.6 ExtensionType

```

<xs:complexType name="ExtensionType">
    <xs:choice>
        <xs:element name="MenuItemList" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/PaymentPosting/Types" type="q1:MenuItemListType" />
        <xs:element name="ReceiptImage" type="xs:string" />
        <xs:element name="SignatureImage" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/PaymentPosting/Types" type="q2:SignatureImageType"
                    />
    </xs:choice>
    <xs:attribute name="class" use="required" />
    <xs:simpleType>
        <xs:restriction base="xs:NMTOKEN">
            <xs:enumeration value="menuitemdetail" />
        </xs:restriction>
    </xs:simpleType>

```

```

<xs:enumeration value="receiptimage" />
<xs:enumeration value="signatureimage" />
</xs:restriction>
</xs:simpleType>
</xs:attribute>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
class	attribute		required	Identifies the type of extension. One of <i>menuitemdetail</i> , <i>receiptimage</i> , or <i>signatureimage</i> .
MenuItemList	element	MenuItemListTy pe	required	A collection of menuitems.
ReceiptImage	element	string	required	A text image of the printed receipt.
SignatureImage	element	SignatureImage Type	required	Signature capture image.

### 13.3.1.7 MenuItemListType

```

<xs:complexType name="MenuItemListType">
  <xs:sequence>
    <xs:element maxOccurs="unbounded" name="MenuItem" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/PaymentPosting/Types"
      type="q1:MenuItemType" />
  </xs:sequence>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
MenuItem	element	MenuItemType	required/ multiple	A collection of menuitems.

### 13.3.1.8 MenuItemType

```

<xs:complexType name="MenuItemType">
  <xs:sequence>
    <xs:element name="id" type="xs:string" />
    <xs:element name="name" type="xs:string" />
    <xs:element name="qty" type="xs:int" />
    <xs:element name="price" type="xs:int" />
    <xs:element name="extPrice" type="xs:int" />
  </xs:sequence>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
id	element	string	required	The menu item identifier.
name	element	string	required	The name of the menu item.
qty	element	int	required	The quantity sold.
price	element	int	required	The menu price for a single item.

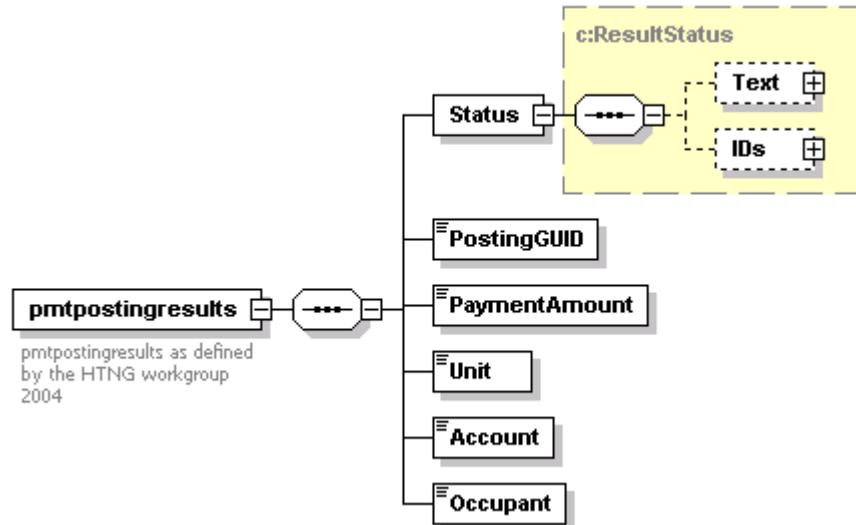

extPrice	element	int	required	Extension of quantity * price.
----------	---------	-----	----------	--------------------------------

### 13.3.1.9 SignatureImageType

```
<xs:complexType name="SignatureImageType">
  <xs:simpleContent>
    <xs:extension base="xs:string">
      <xs:attribute name="encoding" type="xs:string" use="required" />
      <xs:attribute name="imageFormat" type="xs:string" use="required" />
    </xs:extension>
  </xs:simpleContent>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
SignatureImageType	extension	string		Contains the signature data.
encoding	attribute	string	required	Defines the format of the data.
imageFormat	attribute	string	required	Defines the format of the data.

### 13.3.2 PostPaymentResponse

### 13.3.2.1 pmtpostingresults

```
<xs:element name="pmtpostingresults">
  <xs:annotation>
    <xs:documentation>pmtpostingresults as defined by the HTNG workgroup 2004</xs:documentation>
  </xs:annotation>
</xs:element>
```

```

<xs:sequence>
  <xs:element name="Status" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
  <xs:element name="PostingGUID" type="xs:string" />
  <xs:element name="PaymentAmount" type="xs:int" />
  <xs:element name="Unit" type="xs:string" />
  <xs:element name="Account" type="xs:string" />
  <xs:element name="Occupant" type="xs:string" />
</xs:sequence>
</xs:complexType>
</xs:element>

```

Name	Type	Data Type	Use	Comments
Status	element	ResultStatus	required	The result of the posting.
PostingGUID	element	string	required	Return of the submitted GUID.
PaymentAmount	element	int	required	The total payment amount.
Unit	element	string	required	The unit posted to.
Account	element	string	required	The account posted to.
Occupant	element	string	required	The name of the occupant.

#### 13.4 Guest Message

The guest message function is provided in order to send a message to a guest. This is typically provided by the Accommodation Reservation System and may generate a guest notification, such as turning on the message light in the guest's room.

Port	ReservationProviderPortType
Binding	ReservationProviderBinding

<b>Operation</b>	GuestMessage
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#GuestMessage">http://htng.org/PWS/2008B/SingleGuestItinerary#GuestMessage</a>
<b>Input</b>	GuestMessageRequest
<b>Output</b>	GuestMessageResponse
<b>Primary Schema</b>	Reservation.xsd
<b>Role(s) Implemented</b>	Accommodation Reservation System

#### 13.4.1 GuestMessageRequest

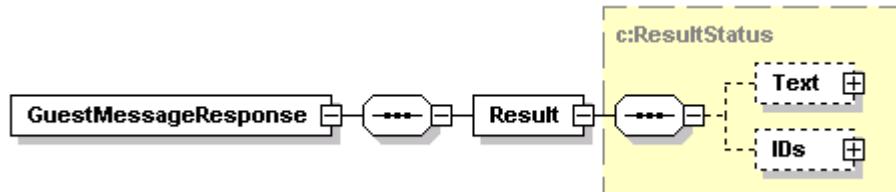

```

<xs:element name="GuestMessageRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="ReservationID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueID" />
      <xs:element name="From" type="xs:string" />
      <xs:element minOccurs="0" name="Contact" type="xs:string" />
      <xs:element name="Message">
        <xs:complexType>
          <xs:simpleContent>
            <xs:extension base="xs:string">
              <xs:attribute name="notify" type="xs:boolean" use="optional" />
            </xs:extension>
          </xs:simpleContent>
        </xs:complexType>
      </xs:element>
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

Name	Type	Data Type	Use	Comments
ReservationID	element	UniqueID	required	The reservation ID in the receiving system.
From	element	string	required	Identifies who the message is from.
Contact	element	string	optional	Identifies a contact to respond to.
Message	element		required	The message text and includes a flag to indicate whether a notification

				should be sent to the guest (for example, to turn on the message light in the guest's room).
--	--	--	--	--

#### 13.4.2 GuestMessageResponse

```
<xs:element name="GuestMessageResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	The result from the operation.

## Chapter 14 Reservation Sync Port Type

The reservation sync port is provided to allow Accommodation Reservation System to notify of a change in the status of a guest or to provide the details of a guest check image. For instance, the Activity Reservation System may desire to know when a guest has checked in or checked out.

- **GuestStatusNotification** – This message may be sent by the Accommodation Reservation System to notify various changes in a guest's status.
- **FetchCheckDetails** – This message may be sent by the Accommodation Reservation System to fetch the details of a guest check image.

### 14.1 Guest Status Notification

The guest status notification message is generated by the Accommodation Reservation System to notify the Activity Reservation System of a change in the status of a guest. Status changes such as Checked In or Checked Out may be sent.

<b>Port</b>	ReservationSyncPortType
<b>Binding</b>	ReservationSyncBinding
<b>Operation</b>	GuestStatusNotification
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#GuestStatusNotification">http://htng.org/PWS/2008B/SingleGuestItinerary#GuestStatusNotification</a>
<b>Input</b>	GuestStatusNotificationRequest
<b>Output</b>	GuestStatusNotificationResponse
<b>Primary Schema</b>	Reservation.xsd
<b>Role(s) Implemented</b>	Activity Reservation System

#### 14.1.1 GuestStatusNotificationRequest

```
<xs:element name="GuestStatusNotificationRequest">
  <xs:annotation>
    <xs:documentation>Message sent when executing a guest status notification.</xs:documentation>
  </xs:annotation>
  <xs:complexType>
    <xs:sequence>
      <xs:element name="GuestStatus" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Reservation/Types" type="q1:GuestStatusNotification">
```

```
    />
  </xs:sequence>
</xs:complexType>
</xs:element>
```

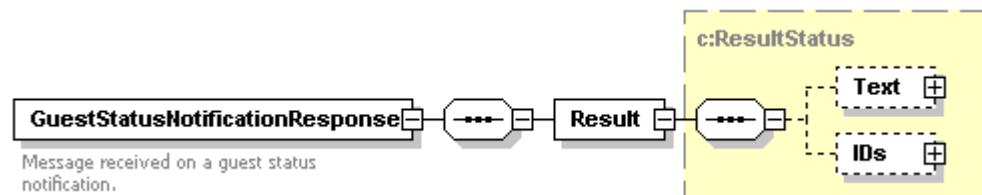

Name	Type	Data Type	Use	Comments
GuestStatus	element	GuestStatusNotification	required	The guest status record.

#### 14.1.2 GuestStatusNotification

```
<xs:complexType name="GuestStatusNotification">
  <xs:sequence>
    <xs:element name="ReservationID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueID" />
    <xs:element minOccurs="0" name="ProfileIDs" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:UniqueIDList" />
    <xs:element name="roomNumber" type="xs:string" />
    <xs:element name="checkInDate" type="xs:dateTime" />
    <xs:element minOccurs="0" name="checkOutDate" type="xs:dateTime" />
    <xs:element minOccurs="0" name="resortId" type="xs:string" />
  </xs:sequence>
  <xs:attribute name="reservationStatus" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:ReservationStatusType"
    use="required" />
  <xs:attribute name="otherReservationStatus" type="xs:string" use="optional" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
reservationStatus	attribute	ReservationStatusType	required	The reservation status.
otherReservationStatus	attribute	string	optional	Not used.
ReservationID	element	UniqueID	required	The reservation ID, as defined by the requesting system.
ProfileIDs	element	UniqueIDList	optional	The primary guest profile ID.
roomNumber	element	string	required	The guest's room number.
checkInDate	element	dateTime	required	The arrival date.
checkOutDate	element	dateTime	optional	The departure date.
resortId	element	string	optional	The resort ID code.

#### 14.1.3 GuestStatusNotificationResponse

```
<xs:element name="GuestStatusNotificationResponse">
  <xs:annotation>
    <xs:documentation>Message received on a guest status notification.</xs:documentation>
  </xs:annotation>
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Result" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
Result	element	ResultStatus	required	The result from the operation.

#### 14.1.4 Sample Messages

## 14.2 Fetch Check Details

The fetch check details message is generated by the Accommodation Reservation System to provide the details of a guest check image. The requesting system submits a `FetchCheckDetailsRequest` message, and the responding system returns a `FetchCheckDetailsResponse` message. If successful, the response message will include the details of the guest check image.

<b>Port</b>	ReservationSyncPortType
<b>Binding</b>	ReservationSyncBinding
<b>Operation</b>	FetchCheckDetails
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/SingleGuestItinerary#FetchCheckDetails">http://htng.org/PWS/2008B/SingleGuestItinerary#FetchCheckDetails</a>
<b>Input</b>	FetchCheckDetailsRequest
<b>Output</b>	FetchCheckDetailsResponse
<b>Primary Schema</b>	Reservation.xsd
<b>Role(s) Implemented</b>	Accommodation Reservation System

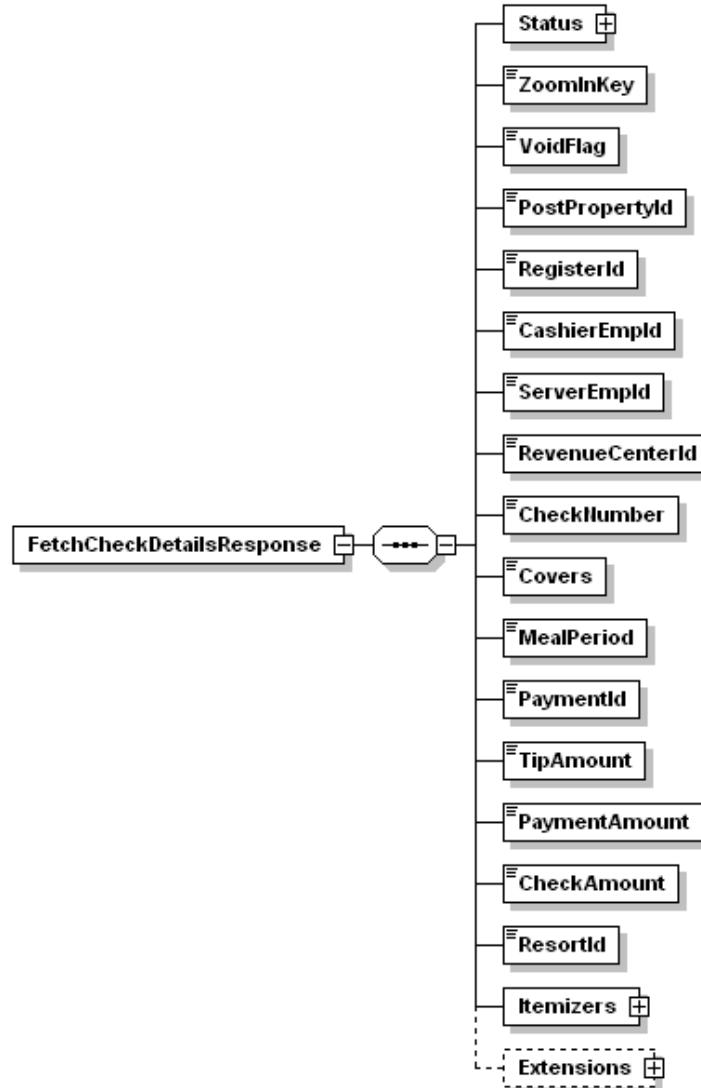

### 14.2.1 FetchCheckDetailsRequest

```
<xs:element name="FetchCheckDetailsRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="ZoomInKey" type="xs:string" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
ZoomInKey	element	string	required	A key which can be used by the receiving system to acquire additional details for the check.

#### 14.2.2 FetchCheckDetailsResponse

```
<xs:element name="FetchCheckDetailsResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="Status" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:ResultStatus" />
```

```

<xs:element name="ZoomInKey" type="xs:string" />
<xs:element name="VoidFlag" type="xs:boolean" />
<xs:element name="PostPropertyId" type="xs:unsignedInt" />
<xs:element name="RegisterId" type="xs:unsignedInt" />
<xs:element name="CashierEmpId" type="xs:unsignedLong" />
<xs:element name="ServerEmpId" type="xs:unsignedLong" />
<xs:element name="RevenueCenterId" type="xs:unsignedLong" />
<xs:element name="CheckNumber" type="xs:unsignedInt" />
<xs:element name="Covers" type="xs:int" />
<xs:element name="MealPeriod" type="xs:unsignedInt" />
<xs:element name="PaymentId" type="xs:unsignedLong" />
<xs:element name="TipAmount" type="xs:int" />
<xs:element name="PaymentAmount" type="xs:int" />
<xs:element name="CheckAmount" type="xs:int" />
<xs:element name="ResortId" type="xs:string" />
<xs:element name="Itemizers" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/PaymentPosting/Types" type="q2:ItemizersType" />
<xs:element minOccurs="0" name="Extensions" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/PaymentPosting/Types"
    type="q3:ExtensionsType" />
</xs:sequence>
</xs:complexType>
</xs:element>

```

Name	Type	Data Type	Use	Comments
Status	element	ResultStatus	required	An indication of the success or failure of the called function.
ZoomInKey	element	string	required	A key which can be used by the receiving system to acquire additional details for the check.
VoidFlag	element	boolean	required	Flag to indicate refund (reversal) posting.
PostPropertyId	element	unsignedInt	required	The ID of the posting property.
RegisterId	element	unsignedInt	required	The register ID code.
CashierEmpId	element	unsignedLong	required	The the cashier ID code.
ServerEmpId	element	unsignedLong	required	The server employee ID code.
RevenueCenterId	element	unsignedLong	required	The revenue center ID code in the POS.
CheckNumber	element	unsignedInt	required	The check number.
Covers	element	int	required	The number of people on the check.
MealPeriod	element	unsignedInt	required	The meal period, such as breakfast, lunch, or dinner.
PaymentId	element	unsignedLong	required	The payment ID code.
TipAmount	element	int	required	The tip amount.
PaymentAmount	element	int	required	The payment amount.
CheckAmount	element	int	required	The check amount.
ResortId	element	string	required	The resort ID code.

Itemizers	element	ItemizersType	required	The number of items on the check.
Extensions	element	ExtensionsType	optional	Optional system implemented data.

  <xs:element minOccurs="0" name="NumberOfPersons" type="xs:int" />
  <xs:element name="TimeSpan" xmlns:q4="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q4:TimeSpan" />
  <xs:element minOccurs="0" name="Duration" xmlns:q5="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q5:TimeSpan" />
  <xs:element minOccurs="0" maxOccurs="unbounded" name="Description" xmlns:q6="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q6:Text">
    <xs:annotation>
      <xs:documentation>Description of the activity </xs:documentation>
    </xs:annotation>
  </xs:element>
  <xs:element minOccurs="0" maxOccurs="unbounded" name="Note" xmlns:q7="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q7:Text">
    <xs:annotation>
      <xs:documentation xml:lang="en">Any additional notes or comments regarding the scheduled activity.</xs:documentation>
    </xs:annotation>
  </xs:element>
  <xs:element minOccurs="0" name="GroupCode" type="xs:string" />
  <xs:element minOccurs="0" name="Amount" xmlns:q8="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q8:Amount">
    <xs:annotation>
      <xs:documentation>Informational item for presentation to guest - not meant for posting charges</xs:documentation>
    </xs:annotation>
  </xs:element>
  <xs:element minOccurs="0" name="DepositRequired">
    <xs:complexType>
      <xs:simpleContent>
        <xs:extension xmlns:q9="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" base="q9:Amount">
          <xs:attribute name="collectedBy">
            <xs:simpleType>
              <xs:restriction base="xs:string">
                <xs:enumeration value="Vendor" />
                <xs:enumeration value="Agent" />
                <xs:enumeration value="Other" />
              </xs:restriction>
            </xs:simpleType>
          </xs:attribute>
        </xs:extension>
      </xs:simpleContent>
    </xs:complexType>
  </xs:element>
  <xs:element minOccurs="0" name="InactiveDate" type="xs:dateTime" />
```

```

<xs:element minOccurs="0" name="Participants">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" maxOccurs="unbounded" name="Participant"
        xmlns:q10="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q10:PersonName" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
<xs:element minOccurs="0" name="URLLink" type="xs:string" />
<xs:element minOccurs="0" name="Extensions">
  <xs:complexType>
    <xs:sequence>
      <xs:element minOccurs="0" maxOccurs="unbounded" name="ActivitySpecific" type="xs:anyType" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
</xs:sequence>
<xs:attribute name="status" type="xs:string" use="required" />
</xs:complexType>

```

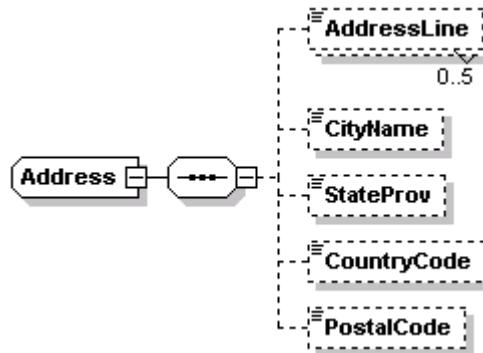

Name	Type	Data Type	Use	Comments
status	attribute	string	required	Activity reservation status. Each system may define its own set of values, but typical examples are RESERVED, BOOKED, CANCELLED, and TENTATIVE.
ActivityIDs	element	UniqueIDList	required	One or more IDs that identify the activity record. The source value indicates the creator/owner of the ID.
ActivityType	element	ActivityType	required	The type of activity. Defined values in the schema include: <i>Golf</i> , <i>Class</i> , <i>Spa</i> , <i>TableReservation</i> , <i>Tour</i> , and <i>Tennis</i> . The schema may be extended to include additional values.
Location	element	string	required	The location for the activity. This is implemented as a location code rather than descriptive text.
Name	element	Text	required/multiple	A short descriptive name for the activity.
NumberOfPersons	element	int	optional	The number of participants scheduled for the activity.
TimeSpan	element	TimeSpan	required	The scheduled start time and length of the activity.
Duration	element	TimeSpan	optional	The length of an activity
Description	element	Text	optional/multiple	The long description for the activity.
Note	element	Text	optional/multiple	Additional notes about the activity.
GroupCode	element	string	optional	If applicable, the group code for the activity (for example, in an accommodation reservation system, the allotment or block code).

Amount	element	Amount	optional	The amount charged for the activity.
DepositRequired	element	Amount (extension)	optional	The deposit amount collected or required for the activity. This element also includes an identification of the responsible party to collect the deposit as either: <i>Vendor</i> , <i>Agent</i> , or <i>Other</i> .
InactiveDate	element	dateTime	optional	The timestamp applicable in case the activity is cancelled or deleted. If set, the activity should be considered removed.
Participants	element	PersonName	optional/multiple	The names of the participants.
URLLink	element	string	optional	The URL link to launch the Activity Reservation System to view or edit full details of this activity.
Extensions	element		optional	Vendor extensions to the activity record.

## 14.4 Common Schema Elements (Common.xsd)

Namespace	http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types
-----------	---

### 14.4.1 Address

```

<xs:complexType name="Address">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="5" name="AddressLine" type="xs:string" />
    <xs:element minOccurs="0" name="CityName" type="xs:string" />
    <xs:element minOccurs="0" name="StateProv" type="xs:string" />
    <xs:element minOccurs="0" name="CountryCode" type="xs:string" />
    <xs:element minOccurs="0" name="PostalCode" type="xs:string" />
  </xs:sequence>
  <xs:attribute name="addressType" type="xs:string" />
  <xs:attribute name="otherAddressType" type="xs:string" />
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
------	------	-----------	-----	----------

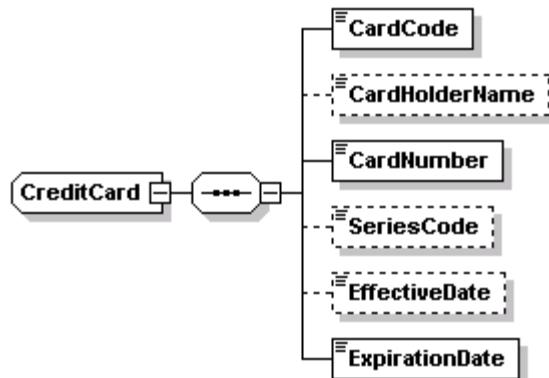

addressType	attribute	string	none	Type of address. Typical values are HOME or BUSINESS, but any internally defined value may be used.
otherAddressType	attribute	string	none	Not currently used.
AddressLine	element	string	optional/multiple	Up to five address lines may be specified.
CityName	element	string	optional	City.
StateProv	element	string	optional	State.
CountryCode	element	string	optional	Country.
PostalCode	element	string	optional	Postal code.

#### 14.4.2 Amount

```
<xs:complexType name="Amount">
  <xs:simpleContent>
    <xs:extension base="xs:double">
      <xs:attribute name="currencyCode" type="xs:string" />
    </xs:extension>
  </xs:simpleContent>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Amount	extension	double		The denominational amount.
currencyCode	attribute	string	none	The currency code the amount is expressed in.

#### 14.4.3 CreditCard

```
<xs:complexType name="CreditCard">
  <xs:sequence>
    <xs:element name="CardCode" type="xs:string" />
```

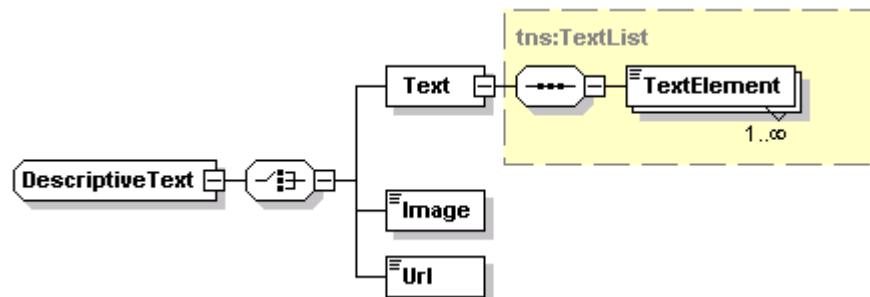

```

<xs:element minOccurs="0" name="CardHolderName" type="xs:string" />
<xs:element name="CardNumber" type="xs:string" />
<xs:element minOccurs="0" name="SeriesCode" type="xs:string" />
<xs:element minOccurs="0" name="EffectiveDate" type="xs:date" />
<xs:element name="ExpirationDate" type="xs:date" />
</xs:sequence>
<xs:attribute name="cardType" type="xs:string" />
<xs:attribute name="otherCardType" type="xs:string" />
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
cardType	attribute	string	none	Credit card type.
otherCardType	attribute	string	none	Not used.
CardCode	element	string	required	Credit card code.
CardHolderName	element	string	optional	Card holder name.
CardNumber	element	string	required	Credit card number.
SeriesCode	element	string	optional	Not used.
EffectiveDate	element	date	optional	Effective date.
ExpirationDate	element	date	required	Expiration date.

#### 14.4.4 DescriptiveText

```

<xs:complexType name="DescriptiveText">
  <xs:choice>
    <xs:element name="Text" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:TextList" />
    <xs:element name="Image" type="xs:string" />
    <xs:element name="Url" type="xs:anyURI" />
  </xs:choice>
</xs:complexType>

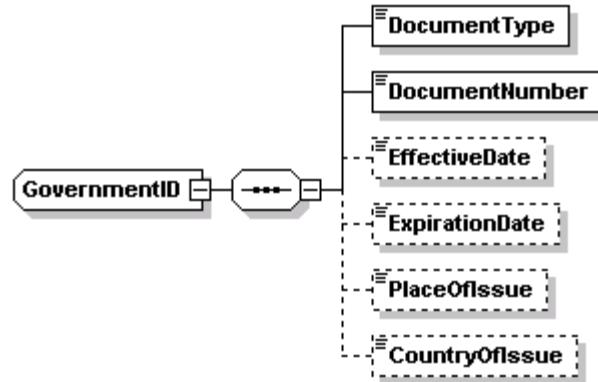

```

Name	Type	Data Type	Use	Comments
Text	element	TextList	required	Collection of Text elements (Choice).

Image	element	string	required	Image value (Choice).
Url	element	anyURI	required	URL (Choice).

14.4.5

#### GovernmentID

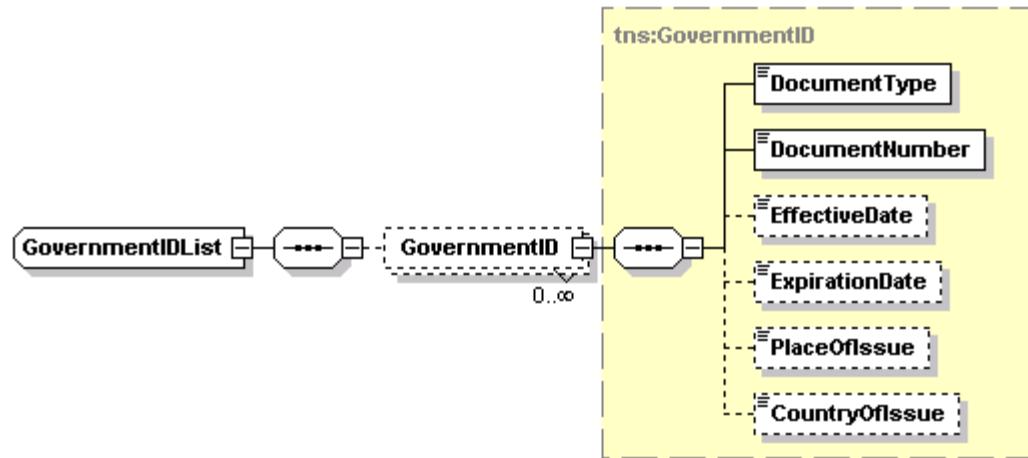

```

<xs:complexType name="GovernmentID">
  <xs:sequence>
    <xs:element name="DocumentType" type="xs:string" />
    <xs:element name="DocumentNumber" type="xs:string" />
    <xs:element minOccurs="0" name="EffectiveDate" type="xs:date" />
    <xs:element minOccurs="0" name="ExpirationDate" type="xs:date" />
    <xs:element minOccurs="0" name="PlaceOfIssue" type="xs:string" />
    <xs:element minOccurs="0" name="CountryOfIssue" type="xs:string" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
DocumentType	element	string	required	The type of document (e.g.,PASSPORT).
DocumentNumber	element	string	required	The document number.
EffectiveDate	element	date	optional	The effective date of the document.
ExpirationDate	element	date	optional	The expiration date of the document.
PlaceOfIssue	element	string	optional	The place of issue.
CountryOfIssue	element	string	optional	The country of issue.

14.4.6

### GovernmentIDList

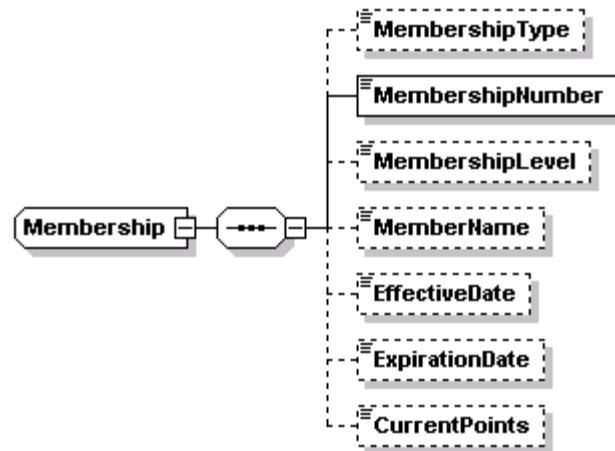

```
<xs:complexType name="GovernmentIDList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="GovernmentID"
      xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:GovernmentID" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
GovernmentID	element	GovernmentID	optional/ multiple	A collection of government ID records.

14.4.7

## Membership

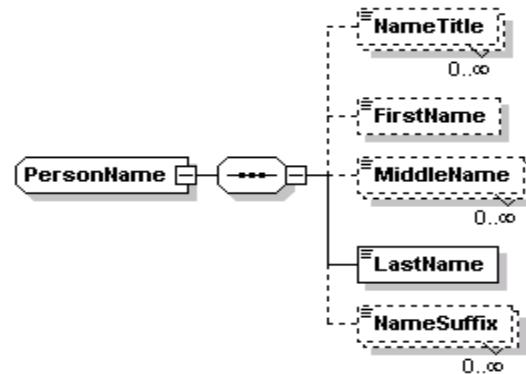

```
<xs:complexType name="Membership">
  <xs:sequence>
    <xs:element minOccurs="0" name="MembershipType" type="xs:string" />
    <xs:element name="MembershipNumber" type="xs:string" />
    <xs:element minOccurs="0" name="MembershipLevel" type="xs:string" />
    <xs:element minOccurs="0" name="MemberName" type="xs:string" />
    <xs:element minOccurs="0" name="EffectiveDate" type="xs:date" />
    <xs:element minOccurs="0" name="ExpirationDate" type="xs:date" />
    <xs:element minOccurs="0" name="CurrentPoints" type="xs:long" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
MembershipType	element	string	optional	Membership type.
MembershipNumber	element	string	required	Membership number.
MembershipLevel	element	string	optional	Membership level (e.g., GOLD, PLATINUM).
MemberName	element	string	optional	Member name.
EffectiveDate	element	date	optional	Membership effective date (or start date).
ExpirationDate	element	date	optional	Membership expiration date.
CurrentPoints	element	long	optional	Membership point accumulated.

14.4.8

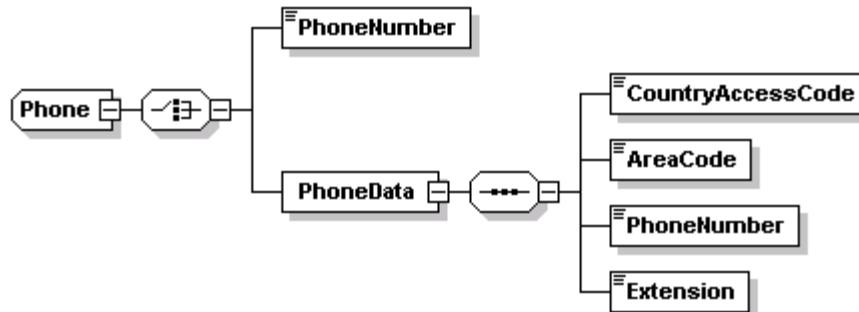

### PersonName

```
<xs:complexType name="PersonName">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NameTitle" type="xs:string" />
    <xs:element minOccurs="0" name="FirstName" type="xs:string" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="MiddleName" type="xs:string" />
    <xs:element name="LastName" type="xs:string" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NameSuffix" type="xs:string" />
  </xs:sequence>
  <xs:attribute name="nameOrdered" type="xs:string" />
  <xs:attribute name="familiarName" type="xs:string" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
nameOrdered	attribute	string	none	Not used.
familiarName	attribute	string	none	Familiar name.
NameTitle	element	string	optional/multiple	Name title (e.g., Mr., Mrs., Dr.).
FirstName	element	string	optional	First name.
MiddleName	element	string	optional/multiple	Middle name.
LastName	element	string	required	Last name.
NameSuffix	element	string	optional/multiple	Name suffix (e.g., Jr., III, Esq.).

#### 14.4.9 Phone

```

<xs:complexType name="Phone">
  <xs:choice>
    <xs:element name="PhoneNumber" type="xs:string" />
    <xs:element name="PhoneData">
      <xs:complexType>
        <xs:sequence>
          <xs:element name="CountryAccessCode" type="xs:string" />
          <xs:element name="AreaCode" type="xs:string" />
          <xs:element name="PhoneNumber" type="xs:string" />
          <xs:element name="Extension" type="xs:string" />
        </xs:sequence>
      </xs:complexType>
    </xs:element>
  </xs:choice>
  <xs:attribute name="phoneType" type="xs:string" />
  <xs:attribute name="phoneRole" type="xs:string" />
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
phoneType	attribute	string	none	Type of phone record. Typical values are HOME or BUSINESS.
phoneRole	attribute	string	none	Phone role. Typical values are PHONE, EMAIL, FAX, or WEBPAGE.
PhoneNumber	element	string	required	Phone number, email address, web address or other value appropriate to the phone role attribute.
PhoneData	element	PhoneData	required	The phone number may be specified as either a string above, or as individual components as described in the element below.

#### 14.4.10 PhoneData

```

<xs:element name="PhoneData">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="CountryAccessCode" type="xs:string" />
      <xs:element name="AreaCode" type="xs:string" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

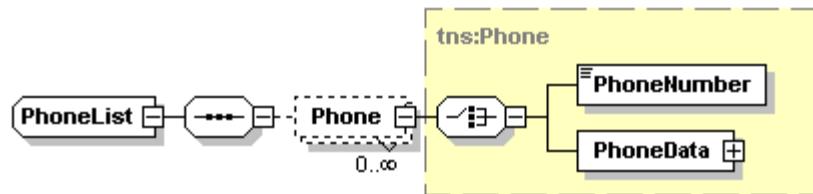

```

<xs:element name="PhoneNumber" type="xs:string" />
<xs:element name="Extension" type="xs:string" />
</xs:sequence>
</xs:complexType>
</xs:element>

```

Name	Type	Data Type	Use	Comments
CountryAccessCode	element	string	required	Country access code.
AreaCode	element	string	required	Area code.
PhoneNumber	element	string	required	Phone number.
Extension	element	string	required	Phone extension.

#### 14.4.11 PhoneList

```

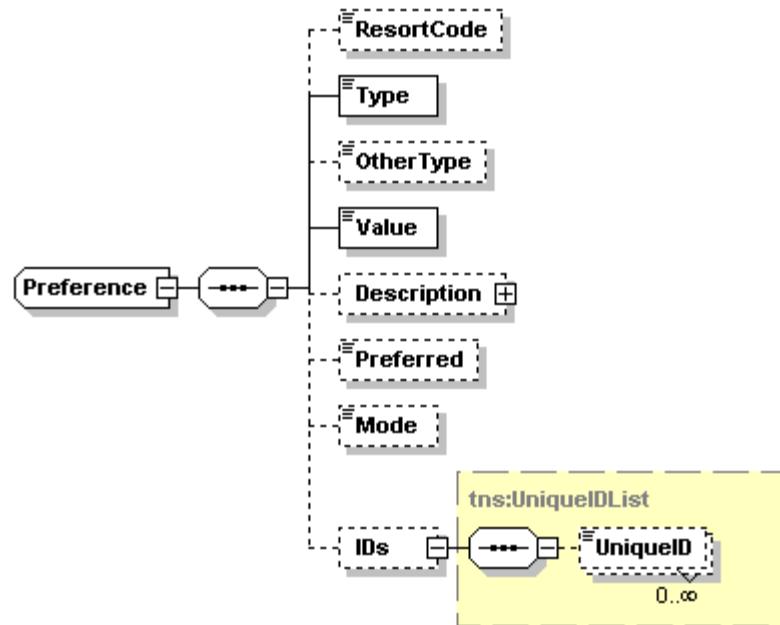

<xs:complexType name="PhoneList">
<xs:sequence>
<xs:element minOccurs="0" maxOccurs="unbounded" name="Phone" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types"
type="q1:Phone" />
</xs:sequence>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
Phone	element	Phone	optional/ multiple	A collection of phone records

14.4.12

### Preference

```

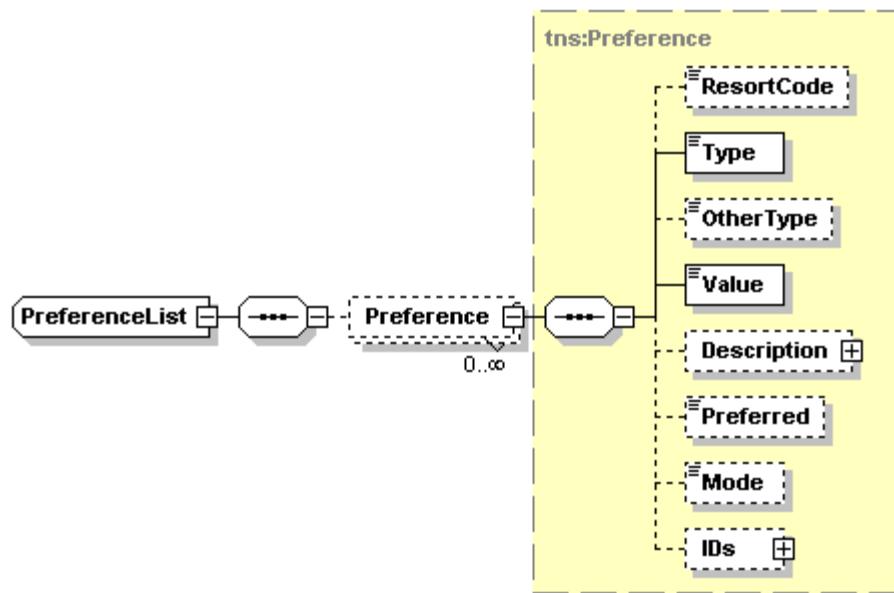

<xs:complexType name="Preference">
  <xs:sequence>
    <xs:element minOccurs="0" name="ResortCode" type="xs:string" />
    <xs:element name="Type" type="xs:string" />
    <xs:element minOccurs="0" name="OtherType" type="xs:string" />
    <xs:element name="Value" type="xs:string" />
    <xs:element minOccurs="0" name="Description" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:DescriptiveText" />
    <xs:element minOccurs="0" name="Preferred" type="xs:string" />
    <xs:element minOccurs="0" name="Mode" type="xs:string" />
    <xs:element minOccurs="0" name="IDs" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:UniqueIDList" />
  </xs:sequence>
  <xs:attributeGroup xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" ref="q3:RecordAdministratorAttributes" />
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
RecordAdministratorAttributes	attr group			Record creation and last update attributes.
ResortCode	element	string	optional	Property code where preference is defined.
Type	element	string	required	Preference type code.

OtherType	element	string	optional	Not used.
Value	element	string	required	Preference value.
Description	element	DescriptiveText	optional	Description of the preference.
Preferred	element	string	optional	Not used.
Mode	element	string	optional	Not used.
IDs	element	UniqueIDList	optional	Internal record IDs.

#### 14.4.13 PreferenceList

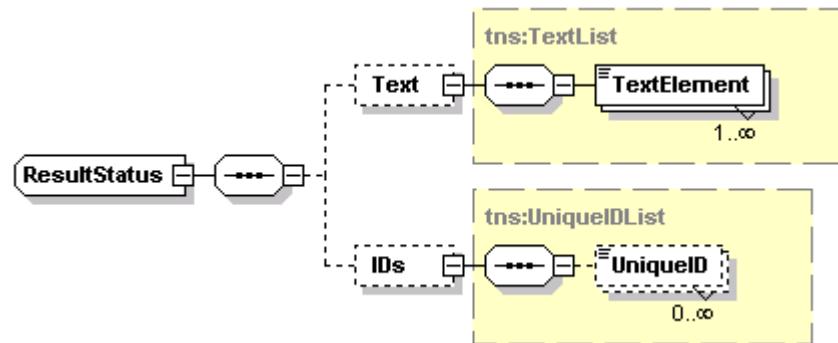

```

<xs:complexType name="PreferenceList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Preference" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types"
      type="q1:Preference" />
  </xs:sequence>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
Preference	element	Preference	optional/ multiple	A collection of Preference elements.

#### 14.4.14 ResultStatus

```

<xs:complexType name="ResultStatus">
  <xs:sequence>
    <xs:element minOccurs="0" name="Text" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:TextList" />
    <xs:element minOccurs="0" name="IDs" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q2:UniqueIDList" />
  </xs:sequence>
  <xs:attribute name="resultStatusFlag" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:ResultStatusFlag" />
  <xs:attribute name="code" type="xs:string" use="optional" />
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
resultStatusFlag	attribute	ResultStatusFlag	none	The result ( <i>SUCCESS</i> or <i>FAIL</i> ) of the operation
code	attribute	string	optional	Error code for failure condition.
Text	element	TextList	optional	Error text for failure condition.
IDs	element	UniqueIDList	optional	Activity ID from requesting system, and if successful, the paired activity ID from the receiving system.

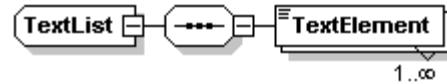

#### 14.4.15 Text

```

<xs:complexType name="Text">
  <xs:simpleContent>
    <xs:extension base="xs:string">
      <xs:attribute name="language" type="xs:language" use="optional" />
    </xs:extension>
  </xs:simpleContent>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
Text	extension	string	optional	Text string.
language	attribute	language	optional	Language code for Text value.

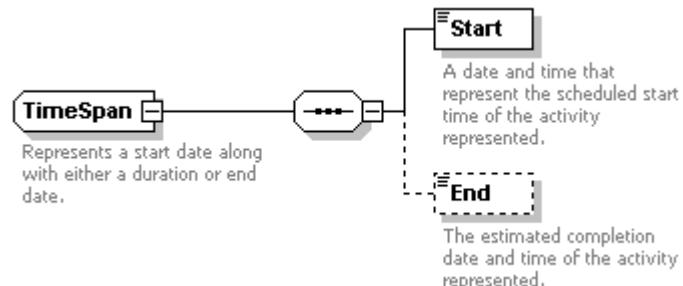

#### 14.4.16 **TextList**

```
<xs:complexType name="TextList">
  <xs:sequence>
    <xs:element maxOccurs="unbounded" name="TextElement" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:Text"
    />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
TextElement	element	Text	required/ multiple	A collection of text elements.

#### 14.4.17 **TimeSpan**

```
<xs:complexType name="TimeSpan">
  <xs:annotation>
    <xs:documentation xml:lang="en">Represents a start date along with either a duration or end date.</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element name="Start" type="xs:dateTime">
      <xs:annotation>
        <xs:documentation xml:lang="en">A date and time that represent the scheduled start time of the activity represented.</xs:documentation>
      </xs:annotation>
    </xs:element>
    <xs:element minOccurs="0" name="End" type="xs:dateTime">
      <xs:annotation>
        <xs:documentation xml:lang="en">The estimated completion date and time of the activity represented.</xs:documentation>
      </xs:annotation>
    </xs:element>
  </xs:sequence>
</xs:complexType>
```

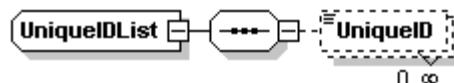

Name	Type	Data Type	Use	Comments
Start	element	dateTime	required	The start date and time.
End	element	dateTime	optional	The optional completion date and time.

#### 14.4.18 UniqueID

```
<xs:complexType name="UniqueID">
  <xs:simpleContent>
    <xs:extension base="xs:string">
      <xs:attribute name="source" type="xs:string" />
    </xs:extension>
  </xs:simpleContent>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
UniqueID	extension	string		The ID value.
source	attribute	string	none	The source for the ID. This value identifies the creator/owner of the ID.

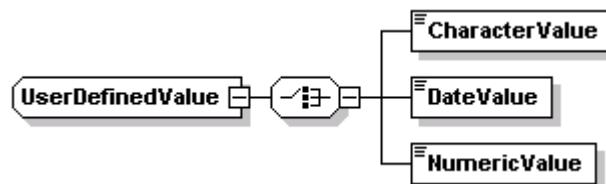

#### 14.4.19 UniqueIDList

```
<xs:complexType name="UniqueIDList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="UniqueID" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types"
      type="q1:UniqueID" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
UniqueID	element	UniqueID	optional/multiple	A list of ID values (see below). Records are often identified by a pair of IDs, where the source attribute identifies who each ID belongs to.

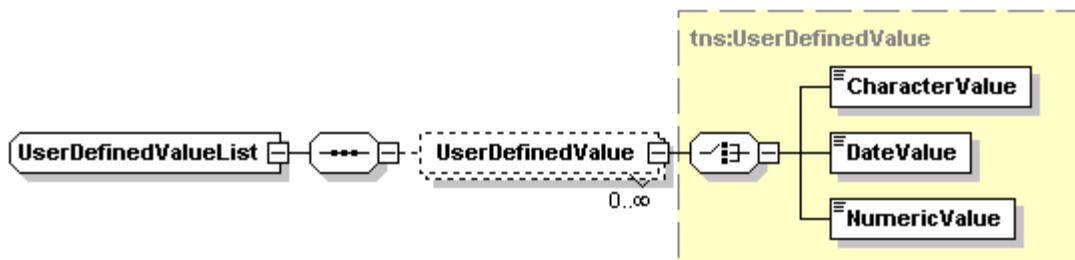

#### 14.4.20 UserDefinedValue

```
<xs:complexType name="UserDefinedValue">
  <xs:choice>
    <xs:element name="CharacterValue" type="xs:string" />
    <xs:element name="DateValue" type="xs:dateTime" />
    <xs:element name="NumericValue" type="xs:float" />
  </xs:choice>
  <xs:attribute name="valueName" type="xs:string" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
valueName	attribute	string	none	User defined value name.
CharacterValue	element	string	required	Character based value (Choice).
DateValue	element	dateTime	required	Date value (Choice).
NumericValue	element	float	required	Numeric value (Choice).

#### 14.4.21 UserDefinedValueList

```
<xs:complexType name="UserDefinedValueList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="UserDefinedValue"
      xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UserDefinedValue" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
UserDefinedValue	element	UserDefinedValue	optional/ multiple	A collection of user defined value elements.

#### 14.4.22 Simple Types

RecordAdministratorAttributes	Attribute Group	insertUser	Internal user code representing the record creator.
		insertDate	Timestamp record was originally created.

		updateUser	Internal user code representing the user who last updated the record.
		updateDate	Timestamp when the record was last updated.
		inactiveDate	Timestamp when the record was inactivated. When null, the record is considered active. When set, the record can be treated as though deleted.
BlackListFlag	Simple Type	REMOVE SET	Enumeration of blacklist values.
Gender	Simple Type	FEMALE MALE UNKNOWN	Enumeration for gender.
ReservationStatusType	Simple Type	CANCELLED CHECKED_IN CHECKED_OUT RESERVED WAITLISTED OTHER REVERSE_CHECKED_IN REVERSE_CHECKED_OUT NO_SHOW	Enumeration for reservation statuses.
ResultStatusFlag	Simple Type	FAIL SUCCESS	Enumeration for status results.
SubscriptionAction	Simple Type	OTHER SUBSCRIBE UNSUBSCRIBE	Enumeration of subscription actions to perform.

## 14.5 Name Schema Elements (name.xsd)

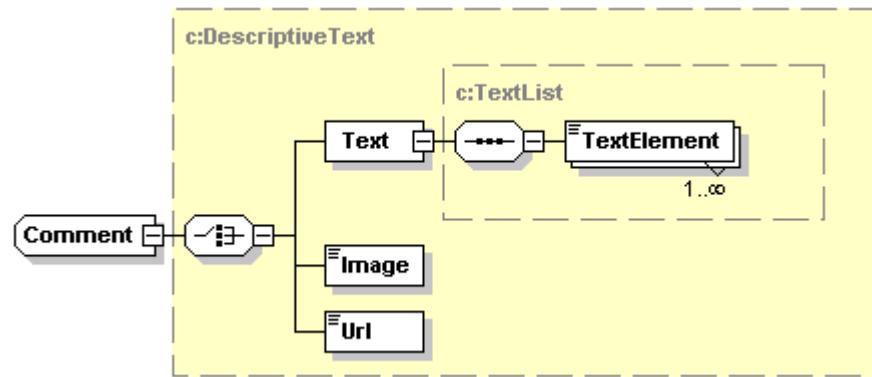

Namespace	http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types
-----------	---

### 14.5.1 BlackList

```
<xs:complexType name="BlackList">
  <xs:simpleContent>
    <xs:extension base="xs:string">
      <xs:attribute name="flag" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:BlackListFlag" />
    </xs:extension>
  </xs:simpleContent>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
BlackList	extension	string		Blacklist flag.
Flag	attribute	BlackListFlag	none	One of REMOVE or SET indicating whether the blacklist flag should be set or not.

#### 14.5.2 Comment

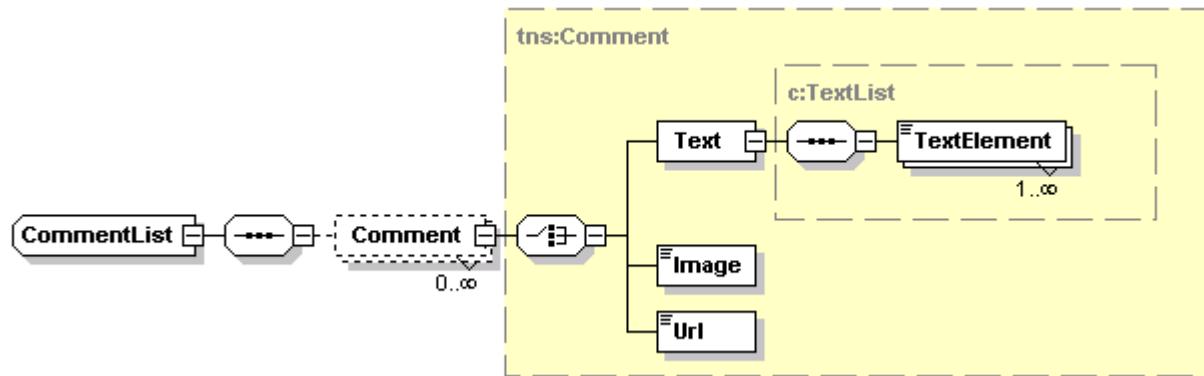

```

<xs:complexType name="Comment">
  <xs:complexContent mixed="false">
    <xs:extension xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" base="q1:DescriptiveText">
      <xs:attribute name="commentType" type="xs:string" />
      <xs:attributeGroup ref="q1:RecordAdministratorAttributes" />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
Comment	extension	DescriptiveText		Extension of DescriptiveText
commentType	attribute	string	none	Type of comment.
RecordAdministratorAttributeS	attr group			Record creation and last update attributes.

#### 14.5.3 CommentList

```

<xs:complexType name="CommentList">
    <xs:sequence>
        <xs:element minOccurs="0" maxOccurs="unbounded" name="Comment" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types"
            type="q1:Comment" />
    </xs:sequence>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
Comment	element	Comment	optional/multiple	A collection of Comment elements.

#### 14.5.4 Company

```

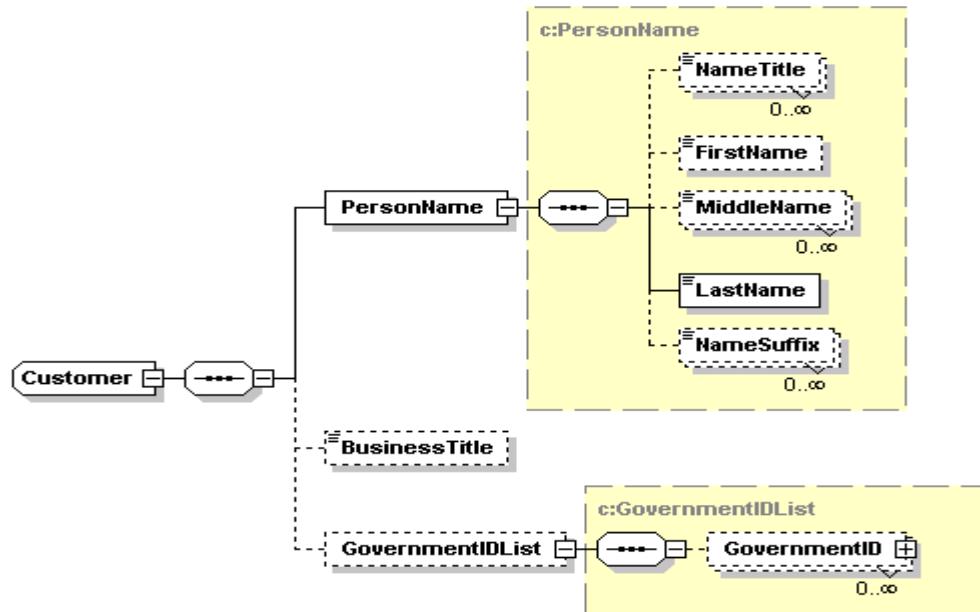

<xs:complexType name="Company">
    <xs:sequence>
        <xs:element name="CompanyName" type="xs:string" />
    </xs:sequence>
    <xs:attribute name="commissionCode" type="xs:string" />
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
commissionCode	attribute	string	none	Not used.
CompanyName	element	string	required	Company name.

14.5.5

### Customer

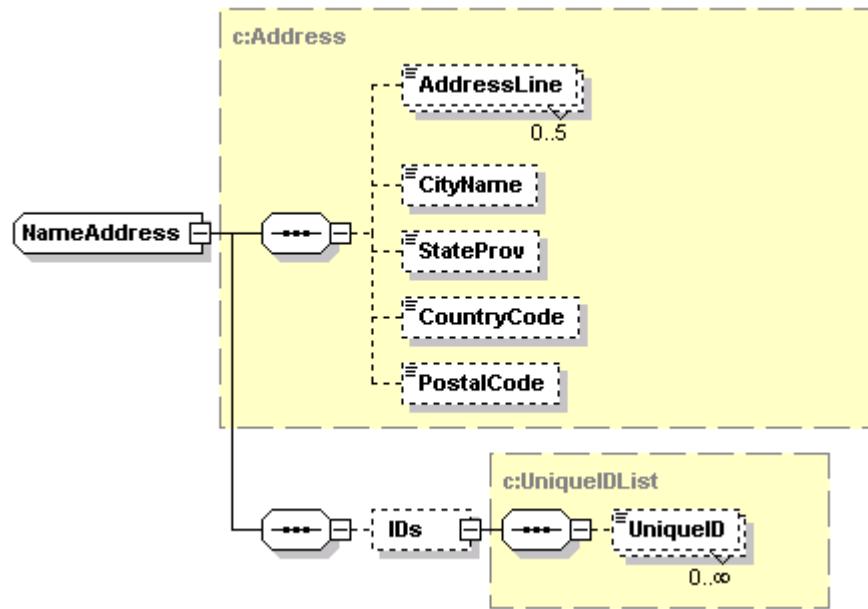

```

<xs:complexType name="Customer">
  <xs:sequence>
    <xs:element name="PersonName" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:PersonName" />
    <xs:element minOccurs="0" name="BusinessTitle" type="xs:string" />
    <xs:element minOccurs="0" name="GovernmentIDList" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types"
      type="q2:GovernmentIDList" />
  </xs:sequence>
  <xs:attribute name="gender" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q3:Gender" />
  <xs:attribute name="birthDate" type="xs:date" />
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
gender	attribute	Gender	none	The guest's gender.
birthDate	attribute	date	none	The guest's birth date.
PersonName	element	PersonName	required	The guest name record.
BusinessTitle	element	string	optional	The guest's title.
GovernmentIDList	element	GovernmentIDList	optional	A collection of government IDs.

14.5.6

**NameAddress**

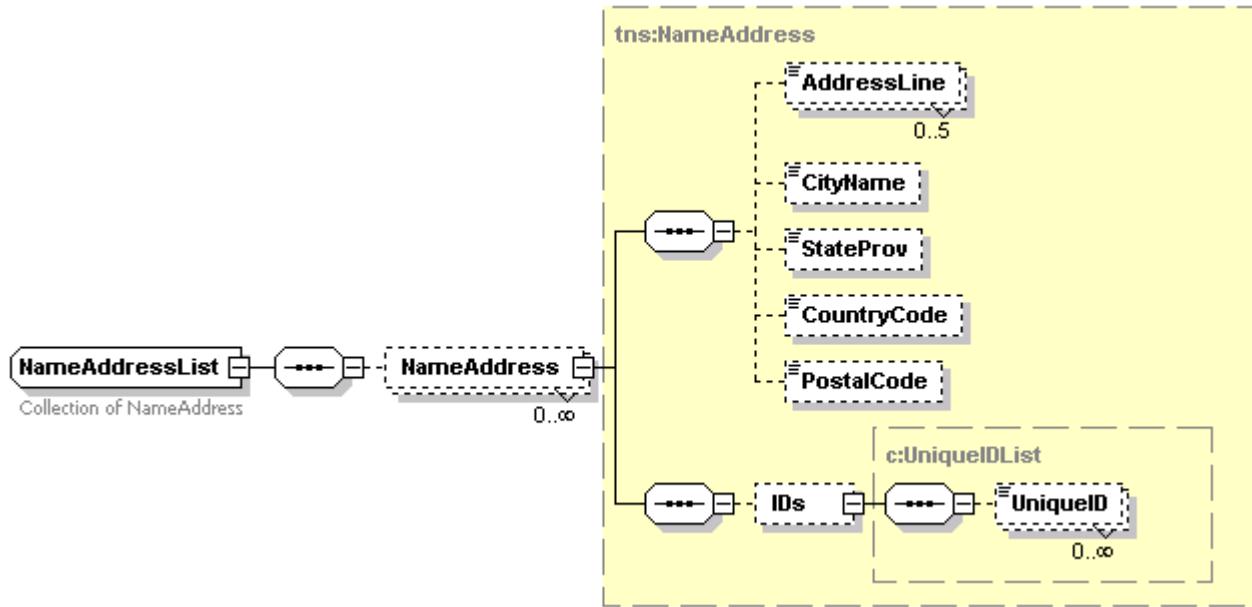

```

<xs:complexType name="NameAddress">
  <xs:complexContent mixed="false">
    <xs:extension xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" base="q1:Address">
      <xs:sequence>
        <xs:element minOccurs="0" name="IDs" type="q1:UniqueIDList" />
      </xs:sequence>
      <xs:attribute name="primary" type="xs:boolean" />
      <xs:attribute name="displaySequence" type="xs:int" />
      <xs:attributeGroup ref="q1:RecordAdministratorAttributes" />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
NameAddress	extension	Address		Extension of Address element type.
primary	attribute	boolean	none	Flag to indicate primary address.
displaySequence	attribute	int	none	Display sequence.
RecordAdministratorAttributes	attr group			Record creation and last update attributes.
IDs	element	UniqueIDList	optional	Internal ID values.

14.5.7

### NameAddressList

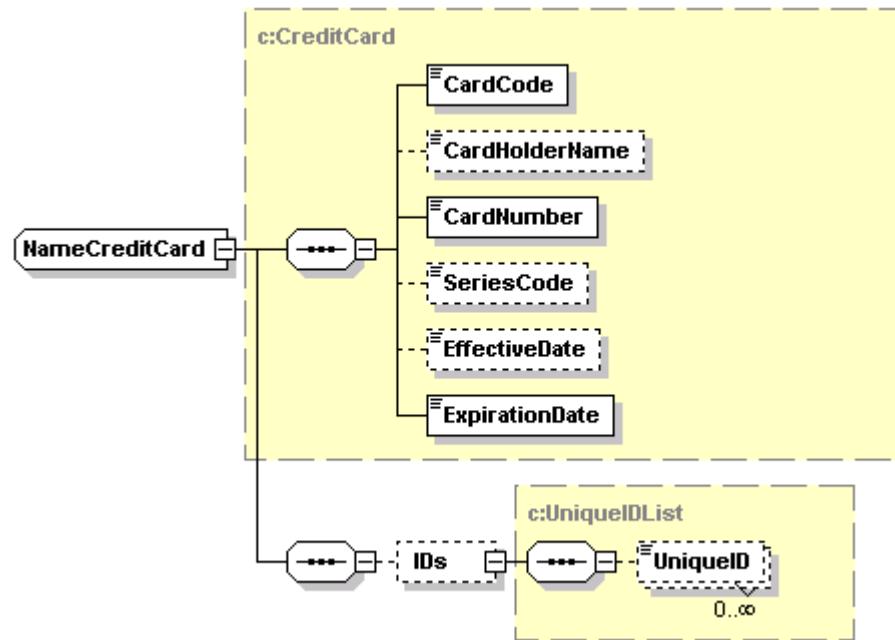

```
<xs:complexType name="NameAddressList">
    <xs:annotation>
        <xs:documentation>Collection of NameAddress</xs:documentation>
    </xs:annotation>
    <xs:sequence>
        <xs:element minOccurs="0" maxOccurs="unbounded" name="NameAddress" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types"
            type="q1:NameAddress" />
    </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
NameAddress	element	NameAddress	optional/ multiple	A collection of NameAddress records.

14.5.8

### NameCreditCard

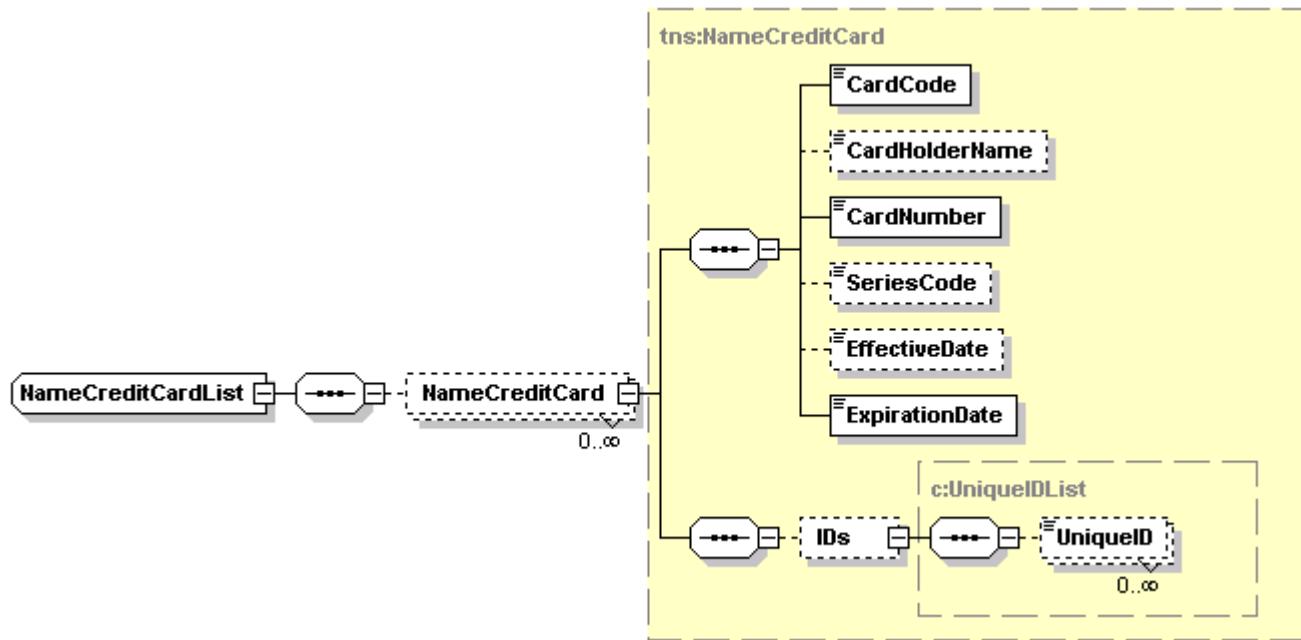

```

<xs:complexType name="NameCreditCard">
  <xs:complexContent mixed="false">
    <xs:extension xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" base="q1:CreditCard">
      <xs:sequence>
        <xs:element minOccurs="0" name="IDs" type="q1:UniqueIDList" />
      </xs:sequence>
      <xs:attribute name="primary" type="xs:boolean" />
      <xs:attribute name="displaySequence" type="xs:int" />
      <xs:attributeGroup ref="q1:RecordAdministratorAttributes" />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
NameCreditCard	extension	CreditCard		Extension of CreditCard element.
primary	attribute	boolean	none	Flag to indicate primary credit card.
displaySequence	attribute	int	none	Display order.
RecordAdministratorAttributes	attr group			Record creation and last update attributes.
IDs	element	UniqueIDList	optional	Internal IDs.

14.5.9

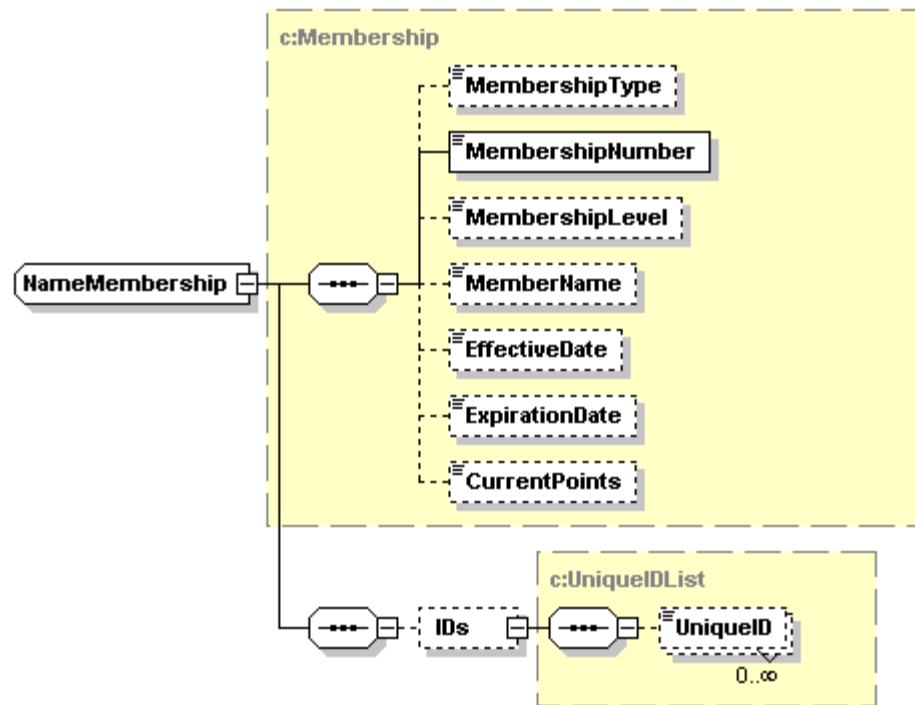

### NameCreditCardList

```
<xs:complexType name="NameCreditCardList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NameCreditCard" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types"
      type="q1:NameCreditCard" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
NameCreditCard	element	NameCreditCard	optional/ multiple	A collection of credit card elements.

#### 14.5.10 NameMembership

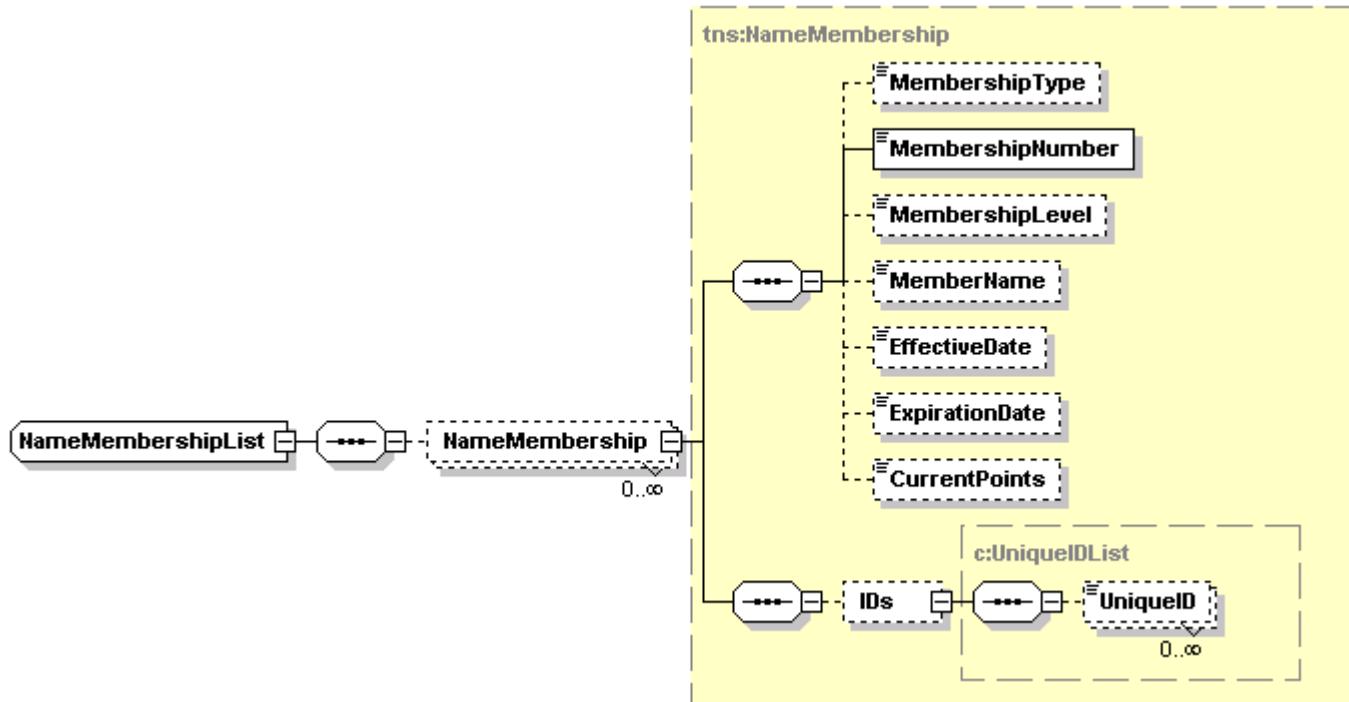

```

<xs:complexType name="NameMembership">
  <xs:complexContent mixed="false">
    <xs:extension xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" base="q1:Membership">
      <xs:sequence>
        <xs:element minOccurs="0" name="IDs" type="q1:UniqueIDList" />
      </xs:sequence>
      <xs:attribute name="primary" type="xs:boolean" />
      <xs:attribute name="displaySequence" type="xs:int" />
      <xs:attributeGroup ref="q1:RecordAdministratorAttributes" />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
NameMembership	extension	Membership		Extension of Membership element.
primary	attribute	boolean	none	Flag to indicate primary membership.
displaySequence	attribute	int	none	Display sequence.

RecordAdministratorAttributes	attr group			Record creation and last update attributes.
IDs	element	UniqueIDList	optional	Internal record IDs.

#### 14.5.11 NameMembershipList

```

<xs:complexType name="NameMembershipList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NameMembership"
      xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q1:NameMembership" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
NameMembership	element	NameMembership	optional/ multiple	A collection of NameMembership elements.

#### 14.5.12 NamePhone

```

<xs:complexType name="NamePhone">
  <xs:complexContent mixed="false">
  
```

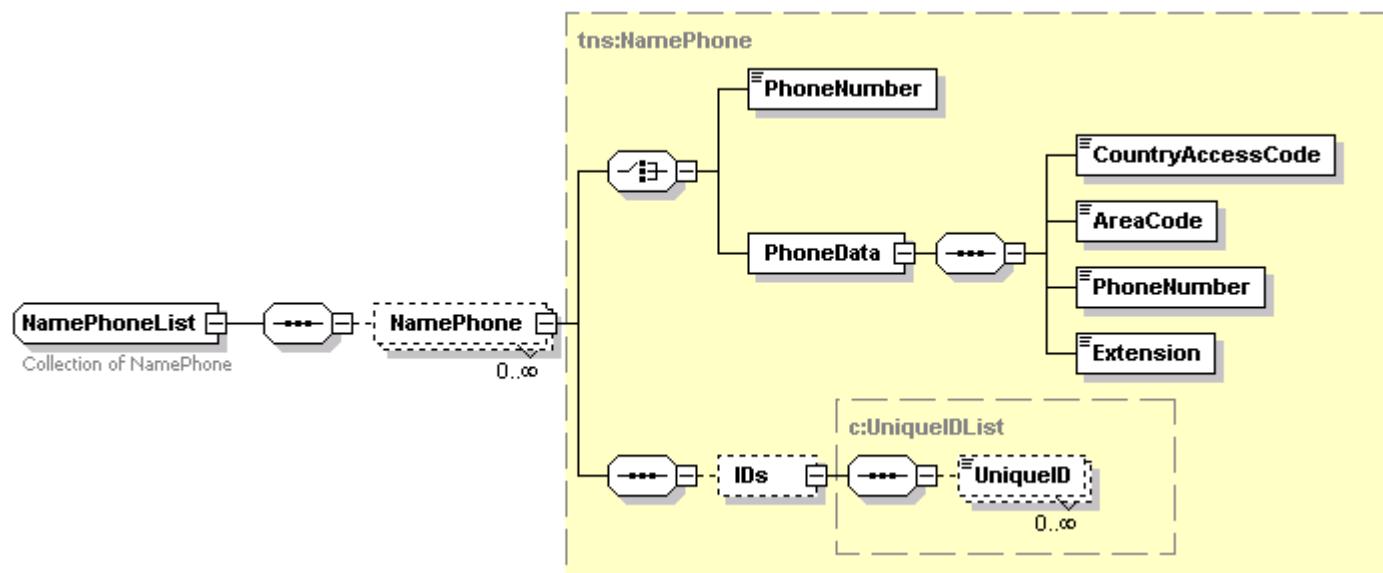

```

<xs:extension xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" base="q1:Phone">
  <xs:sequence>
    <xs:element minOccurs="0" name="IDs" type="q1:UniqueIDList" />
  </xs:sequence>
  <xs:attribute name="primary" type="xs:boolean" />
  <xs:attribute name="displaySequence" type="xs:int" />
  <xs:attributeGroup ref="q1:RecordAdministratorAttributes" />
</xs:extension>
</xs:complexContent>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
NamePhone	extension	Phone		Extension of Phone element type.
Primary	attribute	boolean	none	Flag to indicate primary phone.
displaySequence	attribute	int	none	Display sequence.
RecordAdministratorAttributes	attr group			Record creation and update attributes.
IDs	element	UniqueIDList	optional	Internal record IDs.

#### 14.5.13 NamePhoneList

```

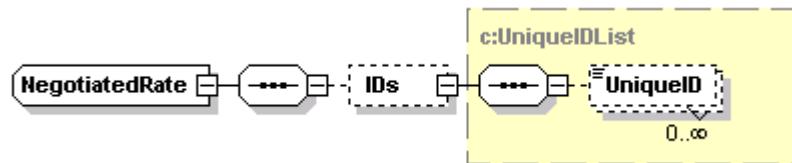

<xs:complexType name="NamePhoneList">
  <xs:annotation>
    <xs:documentation>Collection of NamePhone</xs:documentation>
  </xs:annotation>

```

```
<xs:sequence>
  <xs:element minOccurs="0" maxOccurs="unbounded" name="NamePhone" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types"
    type="q1:NamePhone" />
</xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
NamePhone	element	NamePhone	optional/multiple	A collection of NamePhone records.

#### 14.5.14 NegotiatedRate

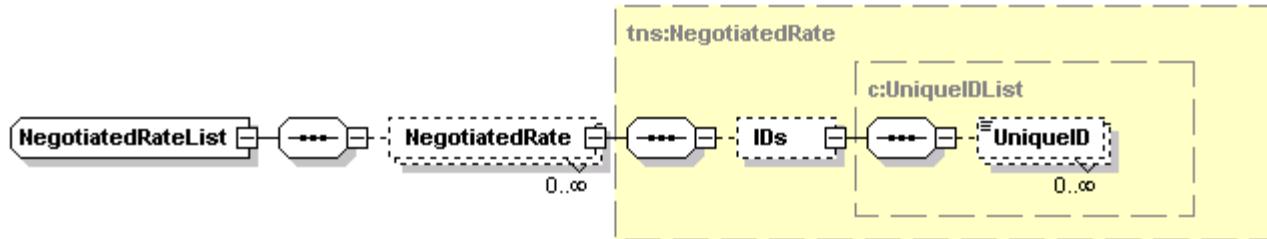

```
<xs:complexType name="NegotiatedRate">
  <xs:sequence>
    <xs:element minOccurs="0" name="IDs" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueIDList" />
  </xs:sequence>
  <xs:attribute name="resortCode" type="xs:string" />
  <xs:attribute name="rateCode" type="xs:string" use="required" />
  <xs:attribute name="commissionCode" type="xs:string" />
  <xs:attribute name="beginDate" type="xs:date" />
  <xs:attribute name="endDate" type="xs:date" />
  <xs:attribute name="displaySequence" type="xs:int" />
  <xs:attributeGroup xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" ref="q2:RecordAdministratorAttributes" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
resortCode	attribute	string	none	Property code where negotiated rate is applicable.
rateCode	attribute	string	required	Rate code.
commissionCode	attribute	string	none	Commission code.
beginDate	attribute	date	none	Begin date for rate.
endDate	attribute	date	none	End date for rate.
displaySequence	attribute	int	none	Display sequence.
RecordAdministratorAttributes	attr group			Record creation and last update attributes.
IDs	element	UniqueIDList	optional	Internal record IDs.

14.5.15

### NegotiatedRateList

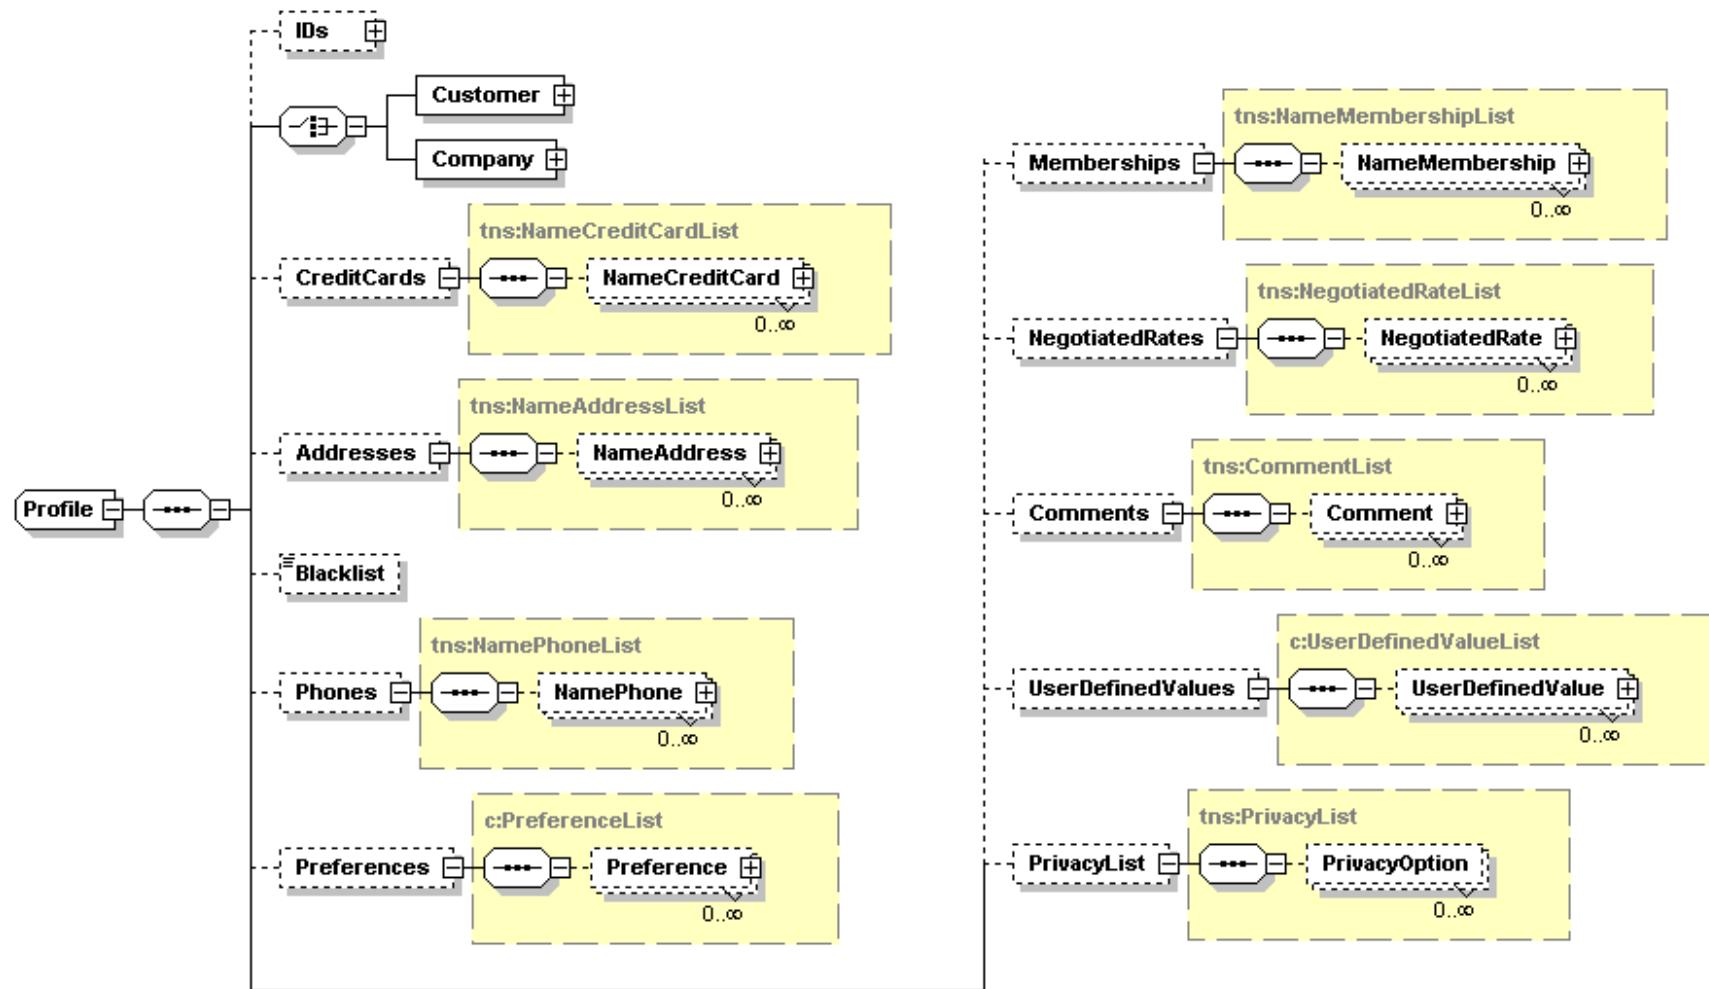

```
<xs:complexType name="NegotiatedRateList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NegotiatedRate" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types"
      type="q1:NegotiatedRate" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
NegotiatedRate	element	NegotiatedRate	optional/multiple	A collection of NegotiatedRate elements.

14.5.16

**Profile**

```

<xs:complexType name="Profile">
    <xs:sequence>
        <xs:element minOccurs="0" name="IDs" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q1:UniqueIDList" />
        <xs:choice>
            <xs:element name="Customer" xmlns:q2="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q2:Customer" />
            <xs:element name="Company" xmlns:q3="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q3:Company" />
        </xs:choice>
        <xs:element minOccurs="0" name="CreditCards" xmlns:q4="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q4:NameCreditCardList" />
        <xs:element minOccurs="0" name="Addresses" xmlns:q5="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q5:NameAddressList" />
        <xs:element minOccurs="0" name="Blacklist" xmlns:q6="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q6:Blacklist" />
        <xs:element minOccurs="0" name="Phones" xmlns:q7="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q7:NamePhoneList" />
        <xs:element minOccurs="0" name="Preferences" xmlns:q8="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q8:c:PreferenceList" />
        <xs:element minOccurs="0" name="Memberships" xmlns:q9="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q9:NameMembershipList" />
        <xs:element minOccurs="0" name="NegotiatedRates" xmlns:q10="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q10:NegotiatedRateList" />
        <xs:element minOccurs="0" name="Comments" xmlns:q11="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q11:CommentList" />
        <xs:element minOccurs="0" name="UserDefinedValues" xmlns:q12="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q12:c:UserDefinedValueList" />
        <xs:element minOccurs="0" name="PrivacyList" xmlns:q13="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q13:PrivacyList" />
    </xs:sequence>

```

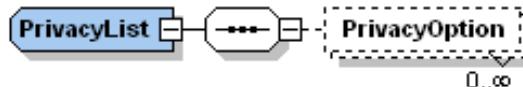

```

    />
<xs:element minOccurs="0" name="Addresses" xmlns:q5="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q5:NameAddressList" />
<xs:element minOccurs="0" name="Blacklist" xmlns:q6="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q6:BlackList" />
<xs:element minOccurs="0" name="Phones" xmlns:q7="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q7:NamePhoneList" />
<xs:element minOccurs="0" name="Preferences" xmlns:q8="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" type="q8:PreferenceList" />
<xs:element minOccurs="0" name="Memberships" xmlns:q9="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types"
    type="q9:NameMembershipList" />
<xs:element minOccurs="0" name="NegotiatedRates" xmlns:q10="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types"
    type="q10:NegotiatedRateList" />
<xs:element minOccurs="0" name="Comments" xmlns:q11="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q11:CommentList" />
<xs:element minOccurs="0" name="UserDefinedValues" xmlns:q12="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types"
    type="q12:UserDefinedValueList" />
<xs:element minOccurs="0" name="PrivacyList" xmlns:q13="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types" type="q13:PrivacyList" />
</xs:sequence>
<xs:attribute name="nameType" type="xs:string" />
<xs:attribute name="protected" type="xs:boolean" />
<xs:attribute name="languageCode" type="xs:string" />
<xs:attribute name="nationality" type="xs:string" />
<xs:attribute name="vipCode" type="xs:string" />
<xs:attribute name="taxExempt" type="xs:boolean" />
<xs:attributeGroup xmlns:q14="http://htng.org/PWS/2008B/SingleGuestItinerary/Common/Types" ref="q14:RecordAdministratorAttributes" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
nameType	attribute	string	none	Name type. Typical values are <i>GUEST</i> or <i>COMPANY</i> .
protected	attribute	boolean	none	Flag to indicate whether profile can be modified by external system.
languageCode	attribute	string	none	Default language code of guest.
nationality	attribute	string	none	Nationality of guest.
vipCode	attribute	string	none	VIP value.
taxExempt	attribute	boolean	none	Not used.
RecordAdministratorAttributes	attr group			Record of creation and last change.
IDs	element	UniqueIDList	optional	Internal profile ID.
Customer	element	Customer	required	The guest name. Either this element or the Company element must be defined. The minimum requirement is the guest's last name.
Company	element	Company	required	The company name. Either this element or the Customer element must be defined.
CreditCards	element	NameCreditCardList	optional	A collection of credit card elements.
Addresses	element	NameAddressList	optional	A collection of address records.
Blacklist	element	BlackList	optional	A flag to indicate whether the guest has been blacklisted.

Phones	element	NamePhoneList	optional	A collection of telephone elements.
Preferences	element	PreferenceList	optional	A collection of guest preference elements.
Memberships	element	NameMembershipList	optional	A collection of membership elements.
NegotiatedRates	element	NegotiatedRateList	optional	A collection of negotiated rate elements.
Comments	element	CommentList	optional	Comments.
UserDefinedValues	element	UserDefinedValueList	optional	A collection of customizable system defined values.
PrivacyList	element	PrivacyList	optional	See PrivacyList, below.

#### 14.5.17 PrivacyList

```

<xs:complexType name="PrivacyList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="PrivacyOption" xmlns:q1="http://htng.org/PWS/2008B/SingleGuestItinerary/Name/Types"
      type="q1:PrivacyOptionType" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
PrivacyOption	element	PrivacyOptionType	optional/multiple	A collection of PrivacyOption elements.

#### 14.5.18 PrivacyOptionType

```

<xs:complexType name="PrivacyOptionType">
  <xs:attribute name="OptionType" use="required">
    <xs:simpleType>
      <xs:restriction base="xs:string">
        <xs:enumeration value="Promotions" />
        <xs:enumeration value="MarketResearch" />
        <xs:enumeration value="ThirdParties" />
        <xs:enumeration value="LoyaltyProgram" />
        <xs:enumeration value="Privacy" />
        <xs:enumeration value="Email" />
        <xs:enumeration value="Mail" />
        <xs:enumeration value="Phone" />
        <xs:enumeration value="SMS" />
      </xs:restriction>
    </xs:simpleType>
  </xs:attribute>
  <xs:attribute name="OptionValue" use="required">
  
```

```
<xs:simpleType>
  <xs:restriction base="xs:string">
    <xs:enumeration value="YES" />
    <xs:enumeration value="NO" />
  </xs:restriction>
</xs:simpleType>
</xs:attribute>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
OptionType	attribute		required	The available options are Promotions, MarketResearch, ThirdParties, LoyaltyProgram, Privacy, Email, Mail, Phone, and SMS.
OptionValue	attribute		required	Yes or No.

## *Part 3     **Digital Signage, Version 1.0***

## Chapter 15 Document Information (Part 3)

### 15.1 Change History

#### 15.1.1 Messaging Requirements

Date	Description	Author
September 2006	First Draft	Neil Schubert, Angela Skoda
October 6, 2006	Updated based on input from Oct. 3 meeting in Boston	Angela Skoda
October 20, 2006	Updated based on the October 13 and October 20 conference calls	Angela Skoda
November 7, 2006	Removed push of data from the Sales and Catering system. Remove references to a reservation identifier	Angela Skoda
November 30, 2006	Added "Response Complete" flag	Angela Skoda

#### 15.1.2 Messaging Specification

Date	Author	Comments
01/19/2007	Alex Shore, Newmarket International, Inc.	Initial draft
02/02/2007	Alex Shore, Newmarket International, Inc.	Schema changes from Digital Signage conference call. For MeetingSpaceResponse – require @meetingKey and Group/@name. For Characteristics request – require property key. For response, added property node similar to how the MeetingSpaceResponse is organized. Updated sample SOAP xml in appendix.
03/23/2007	Alex Shore, Newmarket International, Inc.	Changes from the 03/16/2007 conference call: Fixed namespace typo for MeetingSpaceRequest in the wsdl. Added new fault type for too large of a date range specified.
4/15/2008	Ken Jones	1. Updated MeetingSpaceResponse schema as defined below. 2. Removed sample XML from this document, and added a reference to the actual sample XML included with the API.
5/15/2008	Ken Jones	Removed Draft label from cover page.

#### 15.1.3 Schema Changes

Date	Author	Schema	Comments
01/11/2007	Alex Shore	All except fault schemas	Version 0.3 schemas posted to the HTNG collaboration site

			for review by Digital Signage group.
01/19/2007	Alex Shore	All	Changed verbiage to use MeetingSpace and MeetingSpaceCharacteristics instead of Event and MeetingRoom.
02/02/2007	Alex Shore	MeetingSpaceCharacteristicsRequest.xsd, MeetingSpaceCharacteristicsResponse.xsd, MeetingSpaceResponse.xsd	See above Document changes notes for v1.1.
03/23/2007	Alex Shore	MeetingSpaceServiceFaults.xsd	Added fault for too large of a date range.
05/15/2008	Ken Jones	MeetingSpaceResponse.xsd	<ol style="list-style-type: none"> <li>1. Change Room Key length restrictions from 3 characters to 1 (Element: MeetingSpace).</li> <li>2. Link Sub Meetings (Sub Functions) to their parent Meeting (Main Function)</li> <li>3. Add Backup/Overflow Room Key to the MeetingSpaceResponse file (Element: MeetingSpace) and allow multiple occurrences of BackupMeetingRoom and OverFlowRoom elements.</li> <li>4. Restructure the schema for the MeetingSpaceResponse to better represent the relationship between Event, Meetings and Sub-Meetings and to avoid duplication of the Event information on each Meeting Space.</li> <li>5. Change the startDate,startTime attributes to a single attribute named startDateTime defined as xsd:DateTime</li> </ol>

## 15.2 Purpose

This document provides functional, business, and technical descriptions of the web service requests that are available for querying Meeting Space information from a Sales & Catering application. Expertise in XML, SOAP, and HTTP is required.

The Meeting Space API is a synchronous request/response architecture that provides real-time data back to the caller. This API uses an HTNG 2.0 (draft)-compliant web service.

## 15.3 Terminology

For the purpose of this document the following terms have been defined as follows:

Term	Definition
Vendor	For the purposes of this document, a Vendor is any client that uses the Meeting Space Request web service. An example of a Vendor is a digital signage software application.
Meeting Space	A meeting being used by a group at a hotel for a certain period of time.

Event	A booking associated with a company, account, or agency. A booking can have sleeping rooms and meeting space information.
HTNG	The HTNG protocol is fully described at <a href="http://www.htng.org">www.htng.org</a> . The Meeting Space services are using the HTNG 2.0 framework draft specification.
Property	For the purposes of this document, “property” is the term used for a hotel, facility, resort, etc. The term is used generically.
messageID	GUID that identifies a specific transaction. This value is set by the client in the WS-Addressing SOAP header.
PropertyKey	This value uniquely defines a hotel property for a sales & catering system.

#### 15.4 Referenced Documents

The following table shows the documents on which this API document is dependent:

Name	Description	Location
HTNG 2.1 Framework	Describes the web service framework standards that workgroups must adhere to.	Part 1 of this document
Digital Signage Messaging Requirements	Document made by the Digital Signage workgroup to define the requirements of the meeting space interface.	Included as Chapter 16 of this document

## Chapter 16 Digital Signage Messaging Requirements

### 16.1 Background

This chapter is a collection of Digital Signage Messaging requirements provided by the HTNG Digital Signage Workgroup. Collectively, we have decided to focus the first release of this specification on the messaging between Sales and Catering systems and Digital Signage Vendors. Other sources of information for digital signage, for example, PMS systems, HR systems, Internet Media, etc. will be addressed in future releases.

### 16.2 Functional Requirements

Hotel digital signage deployment consists of television and/or video monitor display technology deployed in public space areas in order to communicate messages to hotel guests and employees. Examples of digital signage applications include locations such as, lobby walls, restaurants and bars, meeting room entry or foyer, conventional halls, exhibit halls, kiosks, and back of house employee systems. Guestroom applications are also used to present messages on hotel room televisions and, potentially, other display technologies such as display telephones.

While this document focuses on the requirements for sales and catering system messaging, we acknowledge that a more comprehensive messaging standard will be required in future releases of this specification.

#### 16.2.1 Overall Assumptions

1. The current business requirement will only accommodate request/response messages initiated by the digital signage application. Future releases of this specification will address a “push” of data from the sales and catering source system.
2. The digital signage application can pull information from the source system either through an automated batch pull or a user-initiated trigger within the digital signage application.
3. The scope of this interface has been limited to messages between a Sales and Catering system and a digital signage application. Information about an individual guest and their participation in an event would require separate PMS integration, which is currently considered out of scope, but will be considered in future releases of this specification.
4. A full set of information will be passed and it is up to the digital signage application to recognize changes, if needed.
5. Each hotel will need to have the ability to regulate and control the frequency of any automated pull of data initiated from the digital signage application. Performance concerns around the frequency of data transfer must be considered.

6. Each hotel will need to have the ability to regulate the number of transactions that can be passed through the interface.

**Definitions:**

- Group – An account, for example, IBM.
- Event – An entire piece of group business, for example, IBM North America Conference
- Meeting – A subset of an event, usually in a single room, for example, a breakout session.

**16.2.2 Sales and Catering Systems**

Selection Criteria – The digital signage application will need the ability to request sales and catering information associated with any combination of the following:

- by property identifier
- by date/time range (with some limit on the number of days)
- by event identifier
- by exhibit flag (Y/N)
- by “postable” flag (Y/N)
- by room grouping (physical location, such as a wing)

This request message should also contain an identifier that specifies how this request was initiated, either through a batch process or through a user-initiated process. This identifier would be appended to the request.

Proposed Sales and Catering Response Data

- Hotel Name and related identifier
- Group Name and related identifier
- Group logo URL or pathname
- Event Name and related identifier
- Event logo URL or pathname
- Event “Post As” Name
- Host Event Identifier (parent of this event, used to indicate a Host/Affiliate relationship)
- Meeting Room Space Display Name and related identifier
- Meeting Name and related identifier (e.g., breakfast, lunch)

- Meeting "Post As" Name (free form description of meeting)
- Date
- Start Time (local time for the property)
- End Time (local time for the property)
- Postable Flag -Y/N
- Exhibit Flag – Y/N
- Backup Meeting Room Space Name
- Overflow Meeting Room Space Name
- Response Complete – Y/N

#### 16.2.3 **Meeting Space Characteristics**

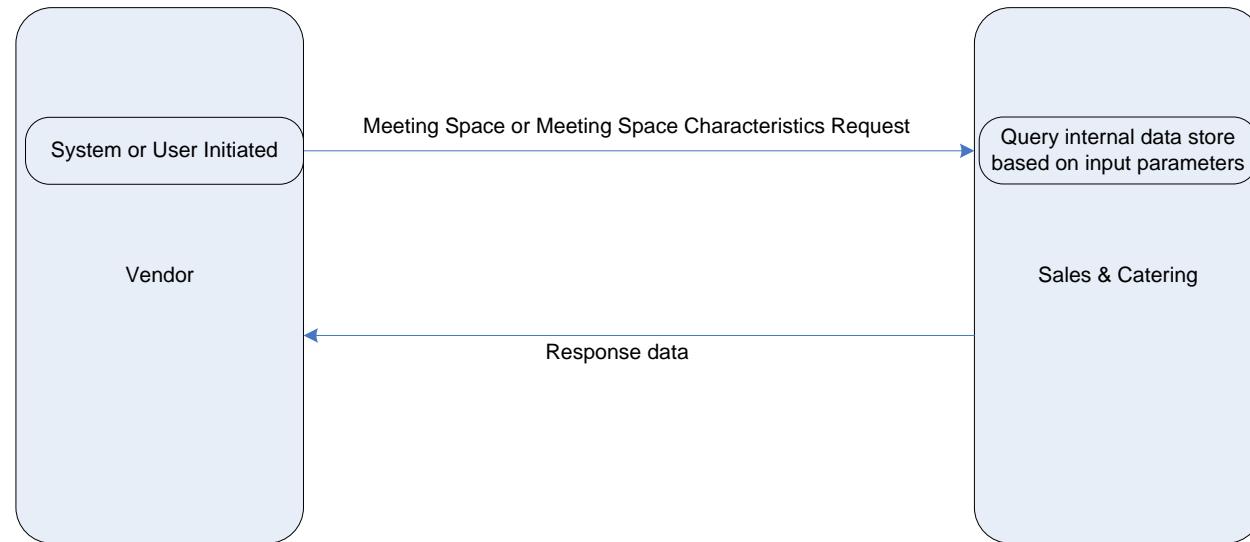

Separate request/response. This data will be refreshed very rarely, when there is a change in meeting room names or configuration.

- Meeting Room Identifier
- Meeting Room Space Display Name
- Floor number
- Floor description
- Room grouping (physical location like a wing, building, etc)
- Directions to the meeting room
- Room Type (Divisible/Indivisible)
- Parent Meeting Room Identifier
- Map reference number

## Chapter 17 Functional Overview

### 17.1 Functional Flow

Below is an example of the flow that would be executed when a Vendor requests Meeting Space or Meeting Space Characteristics data from the Sales & Catering system's web service.

### 17.2 System Roles

The following table defines the system roles for this interface:

Message	Sales and Catering	Digital Signage	Property Management System
Request Meeting Space	Web Service Provider	Web Service Consumer	Web Service Consumer
Request Meeting Space Characteristics	Web Service Provider	Web Service Consumer	Web Service Consumer

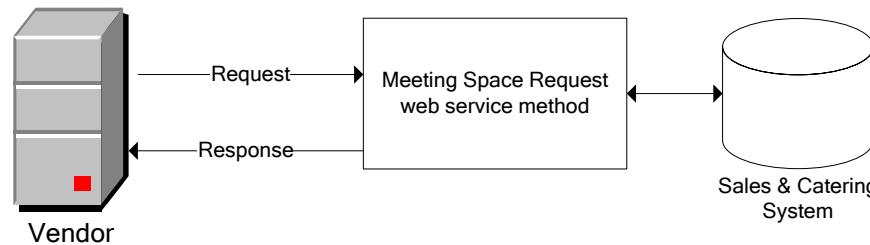

## 17.3 Meeting Space Request – Vendor to Sales & Catering

### 17.3.1 Description

This service request returns Meeting Space data for the specified property key. The caller can optionally specify the following filter criteria:

- Event key
- Whether or not the Meeting Space is an exhibit
- Whether or not the Meeting Space is postable
- A room grouping
- A date/time range

### 17.3.2 Service Request Flow

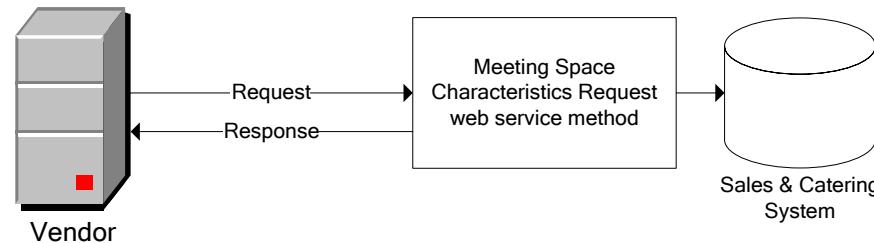

## 17.4 Meeting Space Characteristics Request – Vendor to Sales & Catering

### 17.4.1 Description

This service request return Meeting Space Characteristics for one or all properties registered with the Sales & Catering system.

#### 17.4.2 Service Request Flow

## Chapter 18 Technical Descriptions

### 18.1 Meeting Space Request – Vendor to Sales & Catering

#### 18.1.1 Overview

The Vendor will post a SOAP envelope containing the XML document defined by the schema to the Sales & Catering published SOAP service.

#### 18.1.2 Service Specifications

<b>Service Type</b>	SOAP
<b>Service Name</b>	MeetingSpaceService
<b>Service Operation</b>	MeetingSpaceRequest
<b>Service Parameter Name</b>	MeetingSpaceRequest
<b>Response Type</b>	xml data
<b>Response Value</b>	MeetingSpaceRequest_Sample.xml
<b>Header Action:</b>	<a href="http://htng.org/PWSWG/2007/01/DigitalSignage/MeetingSpaceRequest">http://htng.org/PWSWG/2007/01/DigitalSignage/MeetingSpaceRequest</a>
<b>URL:</b>	nnn.nnn.nnn.nnn defined by the IP address used to reach the S & C web service.
<b>Resource:</b>	/MeetingSpaceService/Request.asmx?WSDL
<b>Input Schema:</b>	MeetingSpaceRequest.xsd
<b>Output (response) Schema:</b>	MeetingSpaceResponse.xsd, or MeetingSpaceServiceFaults.xsd when a SOAP exception is thrown.

#### 18.1.3 Sample Request Message

MeetingSpaceRequest_Sample.xml	This file is included as Chapter 21.1.
--------------------------------	--

#### 18.1.4 Sample Response Message

MeetingSpaceResponse_Sample.xml	This file is included as Chapter 21.2.
---------------------------------	--

#### 18.1.5 Error Faults

If an error occurs, then the response xml data is not returned and a SOAP fault is thrown from the web service. The fault type can be one of the following:

Fault Type	Description
NoMeetingSpaceFoundFault	No Meeting Space entities were found for the specified input filter parameters.

InvalidDateTimeFault	An invalid date or time was specified, or the relationship between the start date and end date is not valid.
InvalidPropertyKeyFault	An invalid property key was specified.
InvalidRoomGroupingFault	An invalid room grouping was specified.
InvalidEventKeyFault	An invalid event key was specified.
DigitalSignageGenericFault	An error occurred and cannot be properly categorized by any of the previous fault types.
DateRangeTooLargeFault	The date range specified was too large to process.

## 18.2 Meeting Space Characteristics Request – Vendor to Sales & Catering

### 18.2.1 Requirements

The Vendor will post a SOAP envelope containing the XML document defined by the schema to the Sales & Catering published SOAP service.

### 18.2.2 Service Specifications

<b>Service Type</b>	SOAP
<b>Service Name</b>	MeetingSpaceService
<b>Service Operation</b>	MeetingSpaceCharacteristicsRequest
<b>Service Parameter Name</b>	MeetingSpaceCharacteristicsResponse
<b>Response Type</b>	xml data
<b>Response Value</b>	MeetingSpaceCharacteristicsResponse_Sample.xml
<b>Header Action:</b>	http://htng.org/PWSWG/2007/01/DigitalSignage/MeetingSpaceCharacteristicsRequest
<b>URL:</b>	nnn.nnn.nnn.nnn defined by the IP address used to reach the S & C web service
<b>Resource:</b>	/MeetingSpaceService/Request.asmx?WSDL
<b>Input Schema:</b>	MeetingSpaceCharacteristicsRequest.xsd
<b>Output (response) schema:</b>	MeetingSpaceCharacteristicsResponse.xsd, or MeetingSpaceServiceFaults.xsd when a SOAP exception is thrown.

### 18.2.3 Sample Request Message

MeetingSpaceCharacteristicsRequest_Sample.xml	This file is included as Chapter 21.3.
---	--

### 18.2.4 Sample Response Message

MeetingSpaceCharacteristicsResponse_Sample.xml	This file is included as Chapter 21.4.
--	--

#### 18.2.5 Error Faults

If an error occurs, then the response xml data is not returned and a SOAP fault is thrown from the web service. The fault type can be one of the following:

Fault Type	Description
NoMeetingSpaceFoundFault	No meeting space was found in the Sales & Catering system for the specified property (if a property key was included in the request).
InvalidPropertyKeyFault	An invalid property key was specified.
DigitalSignageGenericFault	An error occurred and cannot be properly categorized by any of the previous fault types.

## Chapter 19 Business Rules

### 19.1 Usage

1. All outbound Sales & Catering XML messages are UTF-8 encoded.
2. All inbound vendor XML messages must be UTF-8 encoded.
3. All XML should be XML encoded by the Vendor before passing that data to the Sales & Catering web service. The following are examples which should be followed for encoding the XML message. By no means does this constitute a complete list of special encoding.
  - o The character < should be encoded as &lt;;.
  - o The character > should be encoded as &gt;;.
  - o The character & should be encoded as &amp;;.
  - o All attributes should use the double quote to delimit the attribute value. If the attribute values contains a double quote, then that double quote should be encoded as &quot;;.
4. The SOAP message should follow the HTNG 2.0 draft specification. This includes the following details in the inbound request message:
  - o Creation of a WS-Addressing message ID that is included in the SOAP request.
  - o Provide a Sales & Catering supplied username and password token in the SOAP request using WS-Security.

### 19.2 Caching

The Sales & Catering system reserves the right to make a configurable response cache to prevent excessive requests from Vendor systems.

## Chapter 20 MeetingSpaceService WSDL

The wsdl definition for this service is listed below:

```
<?xml version="1.0" encoding="utf-8"?>
<!-- edited with XMLSPY v2004 rel. 4 U (http://www.xmlspy.com) by Kristen Acheson (Newmarket International, Inc.) -->
<!-- This wsdl defines the HTNG 2.0 Digital Signage web service.-->
<wsdl:definitions xmlns:soap="http://schemas.xmlsoap.org/wsdl/soap/" xmlns:tm="http://microsoft.com/wsdl/mime/textMatching/"

## Chapter 21 SOAP Examples

This section provides sample SOAP transactions that are used to communicate with the MeetingSpaceService web service.

### 21.1 Meeting Space Request

Below is an example of a raw SOAP request for Meeting Space data.

Sample File: **MeetingSpaceRequest\_Sample.xml**

```
<?xml version="1.0" encoding="utf-8" ?>
- <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:wsa="http://schemas.xmlsoap.org/ws/2004/08/addressing"
  xmlns:wsse="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-secext-1.0.xsd" xmlns:wsu="http://docs.oasis-
  open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
- <soap:Header>
  <wsa:Action>http://htng.org/PWSWG/2007/01/DigitalSignage#MeetingSpaceRequest</wsa:Action>
  <wsa:MessageID>urn:uuid:44088898-6926-4537-b1a3-4acc8e9f71d0</wsa:MessageID>
- <wsa:ReplyTo>
  <wsa:Address>http://schemas.xmlsoap.org/ws/2004/08/addressing/role/anonymous</wsa:Address>
  </wsa:ReplyTo>
  <wsa:To>http://localhost:2025/MeetingServiceProviderService/Request.asmx</wsa:To>
- <wsse:Security soap:mustUnderstand="1">
- <wsu:Timestamp wsu:Id="Timestamp-e157d58f-6589-4b3e-b2a9-5510dd9f270f">
  <wsu:Created>2008-04-17T15:35:25Z</wsu:Created>
  <wsu:Expires>2008-04-17T15:40:25Z</wsu:Expires>
  </wsu:Timestamp>
- <wsse:UsernameToken xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd" wsu:Id="SecurityToken-
  843aeb4f-07de-4c78-a438-e051d3baa764">
  <wsse:Username>TEST</wsse:Username>
  <wsse:Password Type="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-username-token-profile-
  1.0#PasswordText">TEST_PASS</wsse:Password>
  <wsse:Nonce>9F7BamB3GO47y+BsO8jig==</wsse:Nonce>
  <wsu:Created>2008-04-17T15:35:25Z</wsu:Created>
  </wsse:UsernameToken>
  </wsse:Security>
</soap:Header>
- <soap:Body>
- <MeetingSpaceRequest propertyKey="3917" eventKey="" xmlns="http://htng.org/PWSWG/2007/01/DigitalSignage/MeetingSpaceRequest/Types">
  <DateRange startTime="2008-04-17T08:00:00" endTime="2008-04-17T23:00:00" />
</MeetingSpaceRequest>
</soap:Body>
</soap:Envelope>
```

## 21.2 Meeting Space Response

This example shows the Meeting Space response SOAP message. Note that the wsa:RelatesTo guid in the SOAP header will be the same value that was sent up as the wsa:MessageID in the request.

**NOTE:** The *isResponseComplete* attribute at the top level MeetingSpaceResponse node is used to tell the caller if all of the requested data was returned. There can be cases where all of the data is not returned because the calller did not use a specific enough set of input filter parameters.

Sample File: **MeetingSpaceResponse\_Sample.xml**

```
<?xml version="1.0" ?>
- <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:xsd="http://www.w3.org/2001/XMLSchema" xmlns:wsa="http://schemas.xmlsoap.org/ws/2004/08/addressing"
  xmlns:wsse="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-secext-1.0.xsd" xmlns:wsu="http://docs.oasis-
  open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd">
- <soap:Header>
<wsa:Action>http://htng.org/PWSWG/2007/01/DigitalSignage#MeetingSpaceRequestResponse</wsa:Action>

## 21.5 Meeting Space Service SOAP Faults Returned to Client

When an error occurs within the MeetingSpaceService web service, it throws a custom exception back to the caller. The possible types of exceptions returned are defined as *Error Faults* in Sections 18.1 and 18.2. The definitions for these faults are defined in the MeetingSpaceServiceFaults.xsd schema, which is referenced from the MeetingSpaceService.wsdl.

This is an example of a SOAP envelope for Meeting Space response data where an exception has been thrown on the server because the end date occurred after the start date.

Sample File: **MeetingSpaceResponse\_SOAP\_Fault\_Sample.xml**

```
<?xml version="1.0" encoding="UTF-8" ?>
- <soap:Envelope xmlns:soap="http://schemas.xmlsoap.org/soap/envelope/" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"

*Part 4     **Open Data Exchange, Version 1.4.1***

## Chapter 22 Document Information (Part 4)

22.1 Change History			
Version	Date	Author	Comments
1.0.1	03 December 2007	Paul Armstrong	Initial document available for discussion. Provide element and attribute descriptions include status code definitions. Provide samples. Provide comments.
1.0.2	06 December 2007	Paul Armstrong	Added sections required by standard format. Added element and attribute descriptions.
1.0.3	13 December 2007	Workgroup	Changed message names to include HTNG_ODX prefix. Added text to Section 5. Changed URIs to reflect htng.org/PWS/2008B designators.
1.1.0	13 January 2008	Brian Alessi	Updated FileTransfer.xsd to include file of type base64binary. Created use-cases for PullFile and PushFile messages. Inserted XML descriptions of data with PullFile_SubmitRequest, PullFile_SubmitResponse, PushFile_SubmitRequest, and PushFile_SubmitResponse. Inserted Request and Response SOAP examples from in-house implementation for both PullFile and PushFile.
1.3.0	28 April 2008	Brian Alessi	Changed URIs to reflect htng.org/PWS/2008B. Updated to Final Specification for 2008B. Added WSDL to specification.
1.3.1	02 June 2008	Brian Alessi	Updated specification to represent the asynchronous model of communication with standard naming for method names. Made syntactical update for SOAP and MTOM acronyms and removed named references in WSDLs and XSDs.
1.4.1	25 September 2008	Brian Alessi	No update – Final Release.

## 22.2 Purpose

The document defines the Hotel Technology Next Generation (HTNG) Open Data Exchange Web Services messages.

## 22.3 Scope

The document defines the web services requests and responses that must be implemented to support ODX. The document also includes definitions, use-cases, and message flows associated with ODX data transfers.

## 22.4 Audience

This document is intended for use by developers and systems integrators who wish to use ODX to implement a standard data transfer mechanism. Other IT professionals will find this document useful in gaining a general understanding of HTNG ODX.

## 22.5 Terminology

For the purpose of this document the following terms have been defined as follows:

Term	Definition
HTNG	Hotel Technology Next Generation
MTOM	Message Transmission Optimization Mechanism – Used by ODX to optimize file transfers when using web services. MTOM optimizes the transfer of base 64 encoded data (xs:base64binary) by automatically including it as a binary attachment to the message.
ODX	Open Data Exchange
WSDL	Web Services Description Language
XML	Extensible Markup Language – A general-purpose markup language for creating special-purpose markup languages, capable of describing different kinds of data.
XSD	XML Schema Definition – A language for specifying the grammar of the markup allowed in an XML file. It describes the structure of an XML document
SOAP	Simple Object Access Protocol – A lightweight protocol for exchange of information in a decentralized, distributed environment.

## 22.6 Referenced Documents

Messages defined in this specification will be implemented using the HTNG Web Service Framework V2.1.

The following table shows the documents upon which this document depends:

Name	Location
HTNG Property Web Services Framework 2.1	<a href="http://www.htng.org">http://www.htng.org</a>

## Chapter 23 Overview

ODX messages support “push” and “pull” data transfers. An application may “push” or send data file(s) unsolicited, to a “destination” application. Alternatively an application may “pull” or request data file(s) from a “source” application.

The message formats may be extended and designed to support many diverse use-cases.

The WSDL for the HTNG Open Data Exchange defines the “ODXService” web service. This web service consists of four functions defined in four port types. The port types are:

- **PullFileProviderPortType** – Port Type contains the request method for the Pull File method. This is to support asynchronous communication.
- **PushFileProviderPortType** – Port Type contains the request method for the Push File method. This is to support asynchronous communication.
- **PullFileConsumerPortType** – Port Type contains the response and fault methods for the Pull File request which supports asynchronous communication.
- **PushFileConsumerPortType** – Port Type contains the response and fault methods for the Push File request which supports asynchronous communication.

### 23.1 Supporting Schemas

The Open Data Exchange Web Service imports 1 schema which defines data payloads required by the functional messages. These are:

- FileTransfer.xsd – Defines request and response message contents and options.

As part of the standard HTNG specification it is also required to import 1 custom header schema as follows:

- HTNG\_AsyncHeaders.xsd – Defines the standard header elements required for complying with HTNG specification.

## Chapter 24 Business Process

### 24.1 Overview

Today, much inter-application communication is achieved by transferring data files of various formats using many transport mechanisms. The transport mechanisms and processes vary by application/vendor pair and in practice they are often primitive and usually very difficult to monitor and manage. For hoteliers, this impacts property system reliability, increases support costs, and makes technology evolution a costly headache.

There is a need to establish a simple, consistent, and manageable inter-application file transfer mechanism. This mechanism needs to be platform-independent and compatible with tomorrow's Enterprise Service Bus architectures.

### 24.2 Roles

There are two roles: a File Transfer Requestor (ODX Service Requestor) and a File Transfer Responder (ODX Service Provider).

### 24.3 Behavior

The File Transfer Requestor is responsible for requesting a file transfer, by requesting specific files or providing specific files.

The File Transfer Responder either receives the files included in the request or responds with a message that includes the requested files. The File Transfer Responder is the Web Service provider.

### 24.4 Use-Cases

#### 24.4.1 PullFile\_SubmitRequest/PullFile\_SubmitResponse

The PullFile\_SubmitRequest will give consumers the ability to obtain one or more files from a source system. These files can be large in nature as the following schemas support binary transfer of the files from the source system. This is so the entire response doesn't need to be stored in memory. A consumer can initiate a PullFile\_SubmitRequest to request one or more files from a providing system. Based on the implementation, the location of the files requested should be known by the consumer or should be implied when making a call for a file. The PullFile\_SubmitResponse will contain all file information as defined in FileTransfer.xsd.

- ODX Service Requestor makes a PullFile\_SubmitRequest to the ODX Service Provider.
- The ODX Service Provider reviews the request and collects all files requested.
- The files are converted to byte arrays so they may be transferred back to the ODX Service Requestor.
- The ODX Service Provider delivers the PullFileResponse object back to the ODX Service Requestor.
- The ODX Service Requestor reviews the response for the data which was requested and any errors.

#### 24.4.2 [PushFile\\_SubmitRequest/PushFile\\_SubmitResponse](#)

The PushFile\_SubmitRequest will allow consumers to package multiple files into one message for transfer to a destination (in this case a providing) system. During the data transfer there may exist error messages in the PushFile\_SubmitResponse which can be mimicked back to the consumer.

- The ODX Service Requestor packages a set of file on their server.
- The ODX Service Requestor converts the file to byte arrays for transfer to the ODX Service Provider.
- Using MTOM the ODX Service Requestor consumes the PushFile\_SubmitRequest method from the ODX Service Provider.
- The ODX Service Provider accepts the incoming PushFile\_SubmitRequest and forms a PushFileResponse object.
- The ODX Service Provider delivers the PushFileResponse object back to the ODX Service Requestor.
- The ODX Service Requestor reviews the response for errors.

In all methods of communication the File contents are a byte array transferred using MTOM for large file transfer support. These byte arrays can either be exported to represent the documents as they were in the source system or they can be consumed within the destination service/application. This would have to be an agreement made between vendor systems outside of this specification. There is not contention for how the data is manipulated after it has reached its destination. It is intended that the destination service/application mine the data as needed.

## Chapter 25 Schemas

### 25.1 Open Data Exchange

#### 25.1.1 Soap Header

All messages must include a soap header that conforms to the WSAddressing and WSSecurity specifications. Receiving systems may optionally require that the wsa:To element match a specific destination address, and therefore, this element should be configurable at run time. In addition, all sending systems must identify themselves by specifying a wsa:From element unique for their system. Typically, this is in the form of "URN:<system>". The wsa:ReplyTo address may be the anonymous form described in the August, 2004 specification.

WSSecurity may be optionally implemented. Providers are only required to support basic plain text authentication with a username and password.

The user credentials will be limited to a single login per system, agreed between two vendors. There is no requirement to support multiple user logins from a single vendor through this interface.

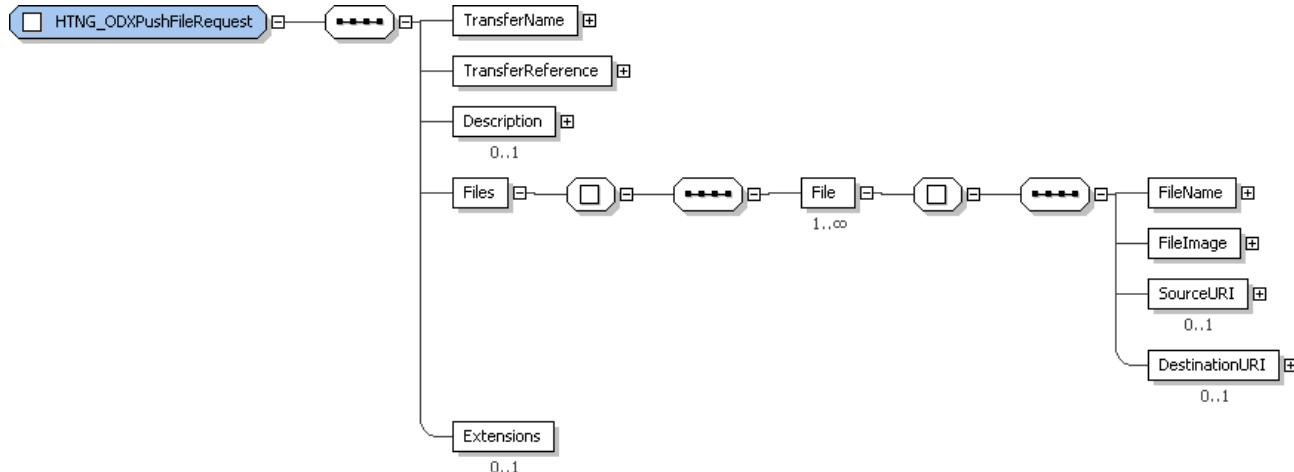

#### 25.1.1.1 Sample Header Message

```
<soap:Header>
<wsa:Action>http://htng.org/PWS/2008B/OpenDataExchange#PushFile_SubmitRequest</wsa:Action>
<wsa:From>
<wsa:Address>urn:SourceApplication</wsa:Address>

### 25.1.2 PushFile\_SubmitRequest

A Push File request message is submitted by a source application to a destination application in order to transfer one or more files from the source application to the destination application. MTOM should be enabled.

<b>Port</b>	PushFileProviderPortType
<b>Operation</b>	PushFile_SubmitRequest
<b>Soap Action</b>	http://htng.org/PWS/2008B/ODXService#PushFile_SubmitRequest
<b>Input</b>	PushFileRequest
<b>Primary Schema</b>	FileTransfer.xsd
<b>Role(s) Implemented</b>	File Transfer Requestor

Element   @Attribute	Number	Description/Contents
PushFileRequest	1	Root element of the message
TransferName	1	Arbitrary name given to this transfer, should be meaningful to the responder.
TransferReference	1	Specific transfer reference, should be unique for each request message.
Description	0..1	Optional description.
Files	1	Element contains the files being transferred.
File	1..N	Contains a file being transferred.
FileName	1	The filename of the file being transferred.
FileImage	1	The file's contents

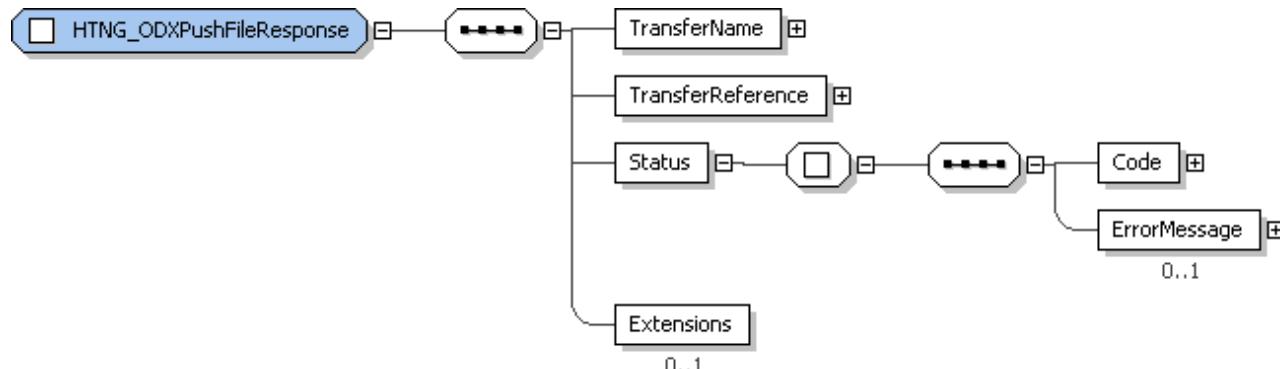

<b>Element   @Attribute</b>	<b>Number</b>	<b>Description/Contents</b>
SourceURI	0..1	Optional element containing the URI from where the file was sourced by the requestor.
DestinationURI	0..1	Optional element containing a URI that defines where the responder should place the file.
Extensions	0..1	Optional element into which Requestor and Responder may place mutually agreed extensions.

### **PushFileRequest**

```
<PushFile xmlns="http://htng.org/PWS/2008B/ODXService#PushFile_SubmitRequest">
  <Request>
    <TransferName>string</TransferName>
    <TransferReference>string</TransferReference>
    <Description>string</Description>
    <Files>
      <File>
        <FileName>string</FileName>
        <FileImage>base64Binary</FileImage>
        <SourceURI>string</SourceURI>
        <DestinationURI>string</DestinationURI>
        <File>base64Binary</File>
      </File>
      <File>
        <FileName>string</FileName>
        <FileImage>base64Binary</FileImage>
        <SourceURI>string</SourceURI>
        <DestinationURI>string</DestinationURI>
        <File>base64Binary</File>
      </File>
    </Files>
    <Extensions />
  </Request>
</PushFile>
```

<b>Port</b>	PushFileConsumerPortType
<b>Operation</b>	PushFile_SubmitResponse
<b>Soap Action</b>	http://htng.org/PWS/2008B/ODXService#PushFile_SubmitResponse
<b>Output</b>	PushFileResponse
<b>Primary Schema</b>	FileTransfer.xsd

<b>Role(s) Implemented</b>	File Transfer Responder
----------------------------	-------------------------

Element   @Attribute	Number	Description/Contents
PushFileResponse	1	Root element of the message
TransferName	1	Arbitrary name given to this transfer, should contain the same value as the request message.
TransferReference	1	Specific transfer reference, should contain the same value as the request message.
Status	1	Contains status information.
Code	1	Contains: 0 = Successful < 0: Error
ErrorMessage	0..1	If Code = Error, this element contains a message describing the error reason.
Extensions	0..1	Optional element into which Requestor and Responder may place mutually agreed extensions.

#### PushFileResponse

```

<PushFileResponse xmlns="http://htng.org/PWS/2008B/ODXService#PushFile_SubmitResponse">
  <PushFileResult>
    <TransferName>string</TransferName>
    <TransferReference>string</TransferReference>
    <Status>
      <Code>string</Code>
      <ErrorMessage>string</ErrorMessage>
    </Status>
    <Extensions />
  </PushFileResult>
</PushFileResponse>
  
```

### 25.1.2.1 Sample Message

#### 25.1.3

#### PullFile\_SubmitRequest

A Pull File request message is submitted by a destination application to a source application in order to transfer one or more files from the source application to the destination application. MTOM should be enabled.

<b>Port</b>	PullFileProviderPortType
<b>Operation</b>	PullFile_SubmitRequest
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/OpenDataExchange#PullFile_SubmitRequest">http://htng.org/PWS/2008B/OpenDataExchange#PullFile_SubmitRequest</a>
<b>Input</b>	PullFileRequest
<b>Primary Schema</b>	FileTransfer.xsd

Role(s) Implemented	File Transfer Requestor
<pre> classDiagram     class HTNG_ODXPullFileRequest {         TransferName         TransferReference         Description         Files         Extensions     }     class Files {         File     }     class File {         FileName         SourceURI         DestinationURI     }      HTNG_ODXPullFileRequest "0..1" --&gt; TransferName     HTNG_ODXPullFileRequest "0..1" --&gt; TransferReference     HTNG_ODXPullFileRequest "0..1" --&gt; Description     HTNG_ODXPullFileRequest "0..1" --&gt; Files     HTNG_ODXPullFileRequest "0..1" --&gt; Extensions      Files "*" --&gt; File     File "*" --&gt; FileName     File "*" --&gt; SourceURI     File "*" --&gt; DestinationURI   </pre>	

Element   @Attribute	Number	Description/Contents
PullFileRequest	1	Root element of the message
TransferName	1	Arbitrary name given to this transfer, should be meaningful to the responder.
TransferReference	1	Specific transfer reference, should be unique for each request message.
Description	0..1	Optional description.
Files	0..1	Optional element contains information about the files to be transfer. Optional as contents of TransferName may, through mutual agreement with the responder, dictate which file(s) are to be transferred.
File	1..N	Contains information about a file to be transferred.
FileName	1	The filename of the file being transferred.
SourceURI	0..1	Optional element containing the URI from where the file is sourced by the requestor.
DestinationURI	0..1	Optional element containing a URI that defines where the requestor should place the file.
Extensions	0..1	Optional element into which Requestor and Responder may place mutually agreed extensions.

### PullFileRequest

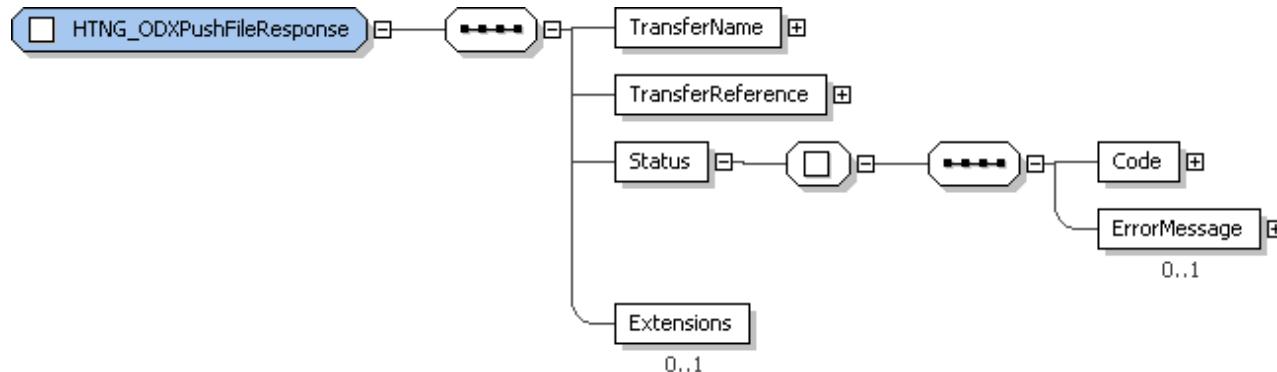

```

<PullFile xmlns="http://htng.org/PWS/2008B/ODXService#PullFile_SubmitRequest">
  <Request>
    <filesField>
      <PullFileRequestFile>
        <FileName>string</FileName>
    </PullFileRequestFile>
  </filesField>
</Request>

```

```
<SourceURI>string</SourceURI>
<DestinationURI>string</DestinationURI>
</PullFileRequestFile>
<PullFileRequestFile>
  <FileName>string</FileName>
  <SourceURI>string</SourceURI>
  <DestinationURI>string</DestinationURI>
</PullFileRequestFile>
</filesField>
<TransferName>string</TransferName>
<TransferReference>string</TransferReference>
<Description>string</Description>
<Files>
  <File>
    <FileName>string</FileName>
    <SourceURI>string</SourceURI>
    <DestinationURI>string</DestinationURI>
  </File>
  <File>
    <FileName>string</FileName>
    <SourceURI>string</SourceURI>
    <DestinationURI>string</DestinationURI>
  </File>
</Files>
<Extensions />
</Request>
</PullFile>
```

<b>Port</b>	PullFileConsumerPortType
<b>Operation</b>	PullFile_SubmitResponse
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/OpenDataExchange#PushFile_SubmitResponse">http://htng.org/PWS/2008B/OpenDataExchange#PushFile_SubmitResponse</a>
<b>Output</b>	PullFileResponse
<b>Primary Schema</b>	FileTransfer.xsd
<b>Role(s) Implemented</b>	File Transfer Responder

Element   @Attribute	Number	Description/Contents
PullFileResponse	1	Root element of the message
TransferName	1	Arbitrary name given to this transfer, should contain the same value as the request message.
TransferReference	1	Specific transfer reference, should contain the same value as the request message.
Status	1	Contains status information.
Code	1	Contains: 0 = Successful < 0: Error
ErrorMessage	0..1	If Code = Error, this element contains a message describing the error reason.
Files	0..1	Optional Element contains the files being transferred. Will not be present if an error occurred.
File	1..N	Contains a file being transferred.
FileSize	0..1	Contains size of individual files being transferred (in bytes).
FileName	1	The filename of the file being transferred.
FileImage	1	The file contents
SourceURI	0..1	Optional element containing the URI from where the file was sourced by the responder.
DestinationURI	0..1	Optional element containing a URI that defines where the requestor should place the file.
Extensions	0..1	Optional element into which Requestor and Responder may place mutually agreed extensions.

#### PullFileResponse

```

<PullFileResponse xmlns="http://htng.org/PWS/2008B/ODXService#PullFile_SubmitResponse">
  <PullFileResult>
    <TransferName>string</TransferName>
  
```

```
<TransferReference>string</TransferReference>
<Status>
  <Code>string</Code>
  <ErrorMessage>string</ErrorMessage>
</Status>
<Files>
  <File>
    <FileName>string</FileName>
    <FileSize>int</FileSize>
    <FileImage>base64Binary</FileImage>
    <SourceURI>string</SourceURI>
    <DestinationURI>string</DestinationURI>
    <File>base64Binary</File>
  </File>
  <File>
    <FileName>string</FileName>
    <FileImage>base64Binary</FileImage>
    <SourceURI>string</SourceURI>
    <DestinationURI>string</DestinationURI>
    <File>base64Binary</File>
  </File>
  </Files>
  <Extensions />
</PullFileResult>
</PullFileResponse>
```

```

## Chapter 26 Implementation Requirements

### 26.1 Mandatory Requirements

A system must implement one or both of the File Transfer Requestor and File Transfer Responder roles. For the File Transfer Requestor role, the PushFile\_SubmitRequest and PullFile\_SubmitRequest messages must be implemented. For the File Transfer Responder role, the PushFile\_SubmitResponse and PullFile\_SubmitResponse messages must be implemented.

SOAP MTOM must be enabled in the programming environment (e.g., .NET or J2EE) for both the Requestor and the Responder.

### 26.2 Implementation Options

The contents of the transferred file may also need to be encrypted to meet regulatory requirements for data security (such as Payment Card Industry Data Security Standards).

### 26.3 External Requirements

#### 26.3.1 Mandatory Requirements

The HTNG Web Services Framework v2.1 must be implemented for transport of the messages. WS-Security must be supported, although it may be disabled in specific implementations where security is not an issue (such as transfer of files within a secure corporate network).

#### 26.3.2 Implementation Options

SSL transport should be considered when transferring sensitive data.

## *Part 5     **Back Office Integration, Version 1.4***

## Chapter 27 Document Information (Part 5)

### 27.1 Change History

#### 27.1.1 Integration Specification

Version	Date	Author	Comments
1.0	July 19, 2007	Dieter Krause SAP AG	Initial submission
1.1	August 3, 2007	Dieter Krause SAP AG	GetMapping and CheckMapping included
1.2	August 10, 2007	Dieter Krause SAP AG	PostGL: single side transactions allowed. Attribute "TransactionMode" added CheckMapping: merged with GetMapping GetMapping results extended with dimensions and debit/credit information for accounts Whole document: name of element "Standarddimensions" changed to "Dimension", since the set of dimensions is not restricted by the specification
1.3	August 17, 2007	Dieter Krause SAP AG	GetMapping and PostAR modified
1.4	August 30, 2007	Dieter Krause SAP AG	MessageNumber added to header, PostGL, PostAR and PostStatistics modified (e.g., ServiceDate added)
1.4	December 19, 2007	Dieter Krause SAP AG	Final editing

#### 27.1.2 Use-Cases

Version	Date	Author	Comments
0.9	June 1, 2007	Dieter Krause SAP AG	Initial proposal, incomplete, for format discussion only
1.0	July 26, 2007	Dieter Krause SAP AG	More use-cases added
1.1	August 2, 2007	Dieter Krause SAP AG	Reflects comments by MICROS Systems, Inc.
1.2	August 10, 2007	Dieter Krause SAP AG	Corresponds to Specification Document Version 1.2
1.3	August 17, 2007	Dieter Krause SAP AG	Use-cases 9 -11 added (PostAR applied to groups) Changes in specification document reflected
1.4	August 23, 2007	Dieter Krause SAP AG	Use-cases adapted to include MessageNumber
1.4	December 19, 2007	Dieter Krause SAP AG	Final editing

#### 27.1.3 Message Specification

Date	Author	Comments
------	--------	----------

Date	Author	Comments
January 26, 2006	Tom Gresham, MICROS Systems, Inc.	Initial submission
August 16, 2007	Tom Gresham, MICROS Systems, Inc.	Revision per workgroup discussions
August 20, 2007	Tom Gresham, MICROS Systems, Inc.	Accounts receivable and mapping sections
August 29, 2007	Tom Gresham, MICROS Systems, Inc.	Correct statistical posting message and additions to accounts receivable message
September 11, 2007	Tom Gresham, MICROS Systems, Inc.	Add missing Message Number to transaction header and update namespace to September 2007
September 20, 2007	Tom Gresham, MICROS Systems, Inc.	Change mapping detail to include multiple dimensions on source element

## 27.2 Contributors

### 27.3 Purpose

This document describes a Back Office Interface for the hotel industry. It also provides functional business and technical descriptions of the web services required. Expertise in XML, SOAP, and HTTP required.

The document also includes extensive use-cases.

### 27.4 Terminology

For the purpose of this document, the following terms have been defined as follows:

Term	Definition
RCS	Revenue Capturing Systems (e.g., a PMS): generate transactions records from different activities of a hotel property which are to be passed to the accounting system either in detail form or as summary information.
Mapping Layer	Software layer, which transforms values used by the RCS into values used by the accounting system. For example, transaction codes used by the revenue capturing system must be mapped to accounts in the accounting system using various parameters.
Accounting System	System which stores summary or detailed accounting information sent from revenue capturing systems for bookkeeping or statistical purposes.

### 27.5 Referenced Documents

The following table shows the documents upon which this document depends:

Name	Location
HTNG Web Service Framework 2.0	Describes the web services framework standards to which implementers must adhere.

## Chapter 28 Business Process

This document defines a generic message format for exchange of accounting data between a revenue capturing system and the back office system in a hotel environment, and this section shows by examples how these services can be used in practice to model different business events (called "use-cases") in a hotel or related institutions like a Spa, and how the resulting postings in the accounting system could look like.

It has been understood that these postings are only examples and could be done differently in different countries due to legislation or common practice.

### 28.1 Use-Cases

#### 28.1.1 Post Revenues

<b>Use-Case ID</b>	PMS01
<b>Name</b>	Post revenues
<b>Brief Description</b>	<p>This use-case describes the case when the RCS (Revenue Capturing System) is sending revenue data to the Accounting system, split by reservation.</p> <p>The RCS is a PMS system. It is sending a revenue of EUR 100 net for room charges.</p> <p>The revenues are qualified by several dimensions.</p>
<b>Provider of Service</b>	Accounting System
<b>Actor</b>	Revenue generating system

Resulting accounts:

#### 28.1.7 Partial Payment from F&B Point of Sale System

Use-Case ID	PMS07
Name	Partial Payment from F&B Point of Sale System
Brief Description	Two guests go have lunch at a Casual restaurant in Hotel "HTNG". At the end of the meal, the check is presented to them. Instead of figuring out who is paying for what, guests decide to just split this check 50/50.

	They ask the server to perform a 50/50 split in following manner: 50% to a Visa card of one guest 50% to the guestroom of one of the guests
<b>Provider</b>	Accounting System
<b>Actor</b>	Revenue capturing system

#### (1) Restaurant Settlement

- Two guests go to have lunch at a Casual restaurant in Hotel "HTNG".
- At the end of the meal, the following check is presented to them:

Quantity	Item	Price	Total
1	Caesar Salad	10.00	10.00
1	House Salad	8.00	8.00
1	Sandwich	15.00	15.00
1	Pasta	17.00	17.00
2	Lemonade	3.00	6.00
	Food Tax (10%)	5.00	5.00
	Beverage Tax (15%)	0.90	0.90
	Gratuity	10.00	10.00
	TOTAL		71.90

- Instead of figuring out who is paying for what, guests decide to just split this check 50/50.
- They ask the server to perform a 50/50 split in following manner:
  - 50% to a Visa card of one guest
  - 50% to the guestroom of one of the guests
- The following settled check is then presented to them:

Quantity	Item	Price	Total
1	Caesar Salad	10.00	10.00
1	House Salad	8.00	8.00
1	Sandwich	15.00	15.00
1	Pasta	17.00	17.00
2	Lemonade	3.00	6.00
	Tax	5.90	5.90

Quantity	Item	Price	Total
	Gratuity	10.00	10.00
	TOTAL		71.90
Payment	Visa		(35.95)
	Room Charge (Mr. 1001)		(35.95)

## (2) POS – PMS Interface Procedure

- Now, the POS system needs to send Room Charge Over to the PMS so that the charge can be posted to the guest folio.
- For the purposes of Package Splitting and third party billing flexibility, the requirement for the POS/PMS interface is to split Room Charges by Itemizers by Meal Period, by Restaurant.
- The following Mapping is setup in the POS/PMS Interface:

RVC#	RVC Name	Itemizers	Serving Period			
			Breakfast	Lunch	Dinner	Brunch
	Casual Restaurant	Food	2600	2620	2640	2660
		Beverage	2601	2621	2641	2661
		Masc.	2605	2625	2645	2665
		SPLIT	2600	2620	2640	2660
		Gratuity	2608	2628	2648	2668
		Tax	2609	2629	2649	2669

- The codes 2600, 2601, etc. represent PMS Transaction Codes.
- SPLIT itemizer is used to auto-balance Partial Payment to the Room Charge.
- Typically, SPLIT is mapped to Food of the corresponding Meal Period. While this does not correctly represent the reality, the ambiguity of partial payment has to be addressed somehow, since guests have not decided exactly which items they would want to go towards who's payment.
- Given this mapping, the check is sent to PMS, onto Guest Folio in room 1001, in the following fashion:

Quantity	Item	Price	Total	PMS Trans Code
1	Caesar Salad	10.00	10.00	2620
1	House Salad	8.00	8.00	2620
1	Sandwich	15.00	15.00	2620
1	Pasta	17.00	17.00	2620
2	Lemonade	3.00	6.00	2621
	Food Tax (10%)	5.00	5.00	2629

Quantity	Item	Price	Total	PMS Trans Code
	Beverage Tax (15%)	0.90	0.90	2629
	Gratuity	10.00	10.00	2628
	SPLIT		(35.95)	2620

It now appears on the guest folio in PMS as follows:

Casual Restaurant Lunch	35.95
-------------------------	-------

Behind the scenes, same folio is represented as follows:

Code	Item	Amount
2620	Casual Restaurant Food	14.05
2621	Casual Restaurant Beverage	6.00
2628	Casual Restaurant Tax	5.90
2629	Casual Restaurant Gratuity	10.00

### (3) PMS to Back Office Interface Procedure

- Given that we now have POS Revenues interfaced directly to Back Office, it's no longer necessary to rely on PMS revenues split for Food and Beverage to report F&B Revenue. The reason we have it split in PMS into Food, Beverage, Tax, Gratuity is to allow PMS to allow to bill certain items only. For example, if a third party requests to pay for one's food, but will not cover their beverage. Or, if a package includes Food and Beverage, but guests have to pay their own tax and gratuity.
- Since POS is the primary source of Revenue reporting for F&B, we can simply map all of the F&B accounts to one clearing G/L account in Back Office (perhaps one for each restaurant).
- At the same time, POS will map Room Charge Payment to the same Clearing Account to offset the amounts.
- Therefore, in the mapping system, the following mapping will be setup:

PMS Trans Code	Description	Back Office G/L Code
2620	Casual Restaurant Food	200-100
2621	Casual Restaurant Beverage	200-100
2628	Casual Restaurant Tax	200-100
2629	Casual Restaurant Gratuity	200-100

In this instance, the following transactions will be posted to the G/L:

Debit	Credit	Account
35.95		Guest Ledger
	35.95	200-100

Assuming that the mapping has already been done in the PMS, the resulting message is the following:

```
<PostGL>
<Header TransactionMode = 'SingleSide'>
<MessageNumber> ABC12345</MessageNumber>
<PropertyCode>01</PropertyCode>
<TransactionDate>6-DEC-06</TransactionDate>
<SourceSystemType>PMS</SourceSystemType>
<SourceSystemId>PMS0001</SourceSystemId>
</Header>

<Transaction>
  <Credit>
<TransactionAccountNmber>200-100</ TransactionAccountNmber >
< Amount>35.95</ Amount>
< Currency>USD</ Currency>
<TransactionText> Room Charge 4-DEC-06</ TransactionText>
  </Credit>
  </Transaction>
</PostGL
```

#### (4) POS to Back Office Mapping

The following mapping exists between POS and Back Office system:

RVC Name	Itemizers	BackOffice G/L Code
Casual Restaurant	Food	200-201
Casual Restaurant	Beverage	200-202
Casual Restaurant	Misc	200-203
Casual Restaurant	Gratuity	200-204
Casual Restaurant	Tax	200-205
Casual Restaurant	Room Charge Settlement	200-100
Casual Restaurant	Visa Settlement	200-101

Therefore, the aforementioned check would interface to a Back Office system in the following manner:

Debit	Credit	Account
35.95		200-100
35.95		200-101
	50.00	200-201
	6.00	200-202
	10.00	200-204
	5.90	200-205

Assuming that the mapping has already been done in the PMS, the resulting message is the following:

```
<PostGl>
<Header TransactionMode = 'PostingRecord'>
<MessageNumber> ABC12345</MessageNumber>
<PropertyCode>01</PropertyCode>
<TransactionDate>6-DEC-06</TransactionDate>
<SourceSystemType>F&B</SourceSystemType>
<SourceSystemId>POS0001</SourceSystemId>
</Header>

<Transaction>
    <Debit>
        <TransactionAccountNumber>200-100</ TransactionAccountNumber >
        < Amount>35.95</ Amount>
        < Currency>USD</ Currency>
        <TransactionText> Offset for Partial Payment</ TransactionText>
            </Debit>
            <Debit>
                <TransactionAccountNumber>200-101</ TransactionAccountNumber >
                < Amount>35.95</ Amount>
                < Currency>USD</ Currency>
                <TransactionText> VisaCard Payment </ TransactionText>
                    </Debit>

                    <Credit>
                        <TransactionAccountNumber>200-201</ TransactionAccountNumber >
                        < Amount>50.00</ Amount>
                        < Currency>USD</ Currency>
                        <TransactionText> RevenueFood </ TransactionText>
                            </Credit >
                            <Credit>
                                <TransactionAccountNumber>200-202</ TransactionAccountNumber >
                                < Amount>6.00</ Amount>
                                < Currency>USD</ Currency>
                                <TransactionText> RevenueBeverage </ TransactionText>
                                    </Credit >
                                    <Credit>
                                        <TransactionAccountNumber>200-204</ TransactionAccountNmber >
                                        < Amount>10.00</ Amount>
                                        < Currency>USD</ Currency>
                                        <TransactionText> RevenueGratuity</ TransactionText>
                                            </Credit >
                                            <Credit>
                                                <TransactionAccountNumber>200-205</ TransactionAccountNumber >
                                                < Amount>5.90</ Amount>
                                                < Currency>USD</ Currency>
                                                <TransactionText> Tax</ TransactionText>
                                                    </Credit
                                                    </Transaction>
</PostGl>
```

**(5) Combined Posting of the Same Guest Check from PMS and POS into Back Office System**

Debit	Credit	Account
35.95		Guest Ledger
	35.95	200-100
35.95		200-100
35.95		200-101
	50.00	200-201
	6.00	200-202
	10.00	200-204
	5.90	200-205

As we can see from this examination, the revenues have been reported correctly, and the clearing account 200-100 has received offsetting postings.

**28.1.8 Correction of Revenue Posting**

Use-Case ID	PMS08
Name	Correction of revenue postings
Brief Description	This use-case describes the case when the RCS (Revenue Capturing System) has to correct postings which have been done earlier; i.e., during precedent night audits.  This could be triggered for example by a guest checking his invoice and complaining about wrong beverage charges included in the invoice.
Provider of Service	Accounting System
Actor	Revenue generating system

#### 28.1.9 Guest Invoice with Line Detail Billed to Third Party to City Ledger

<b>Use-Case ID</b>	PMS09
<b>Name</b>	Guest invoice with line detail billed to third party to city ledger
<b>Brief Description</b>	A guest stays two nights in Standard Room (100/night) with 20 portage charge. Invoice is sent to a wholesaler whose reference number (booking/trip/tour, etc.) is 123456. ( <b>NOTE:</b> Taxes were applied before transfer from Guest Ledger.)  One message is used by the RCS:  The first message posts the invoice.  Billing is done by RCS and includes line detail.

## Chapter 29 General Attributes of the Back Office – Interface

The interface described in this document is intended to become a standard interface which can be used to send basic accounting and statistical data from various hotel-specific systems to accounting systems run in the hotel back office.

The interface is based on a set of web services. The messages which are interchanged between the interconnected systems are formatted as SOAP documents, as described in HTNG Framework 2.0 document.

An important characteristic of the messages described in this document is that they modify or add data in an accounting system. These are highly critical data, which must not be corrupted by processing a message twice or by loosing a message.

Since Framework 2.0 does not support advanced Web Service protocols like WS Transaction or WS ReliableMessaging, additional measures have to be taken by the communication partners using these messages to ensure that the communication is reliable.

In order to make this task easier for the potential implementors, a MessageNumber element is included in each message header. The element MessageNumber must be kept unique by the sender of a message. If a message has to be repeated – e.g., due to transmission problems – the same MessageNumber has to supplied. If a message is received in the Back Office system with a MessageNumber which has already been received before, the Back Office system has to discard this message and send a positive acknowledgement in order to prevent further repetitions.

The interface is not designed with a specific posting model in mind. The implementation of a specific posting model is left up to the mapping layer. Examples of postings resulting from messages sent to the accounting system can be found in the separate document "use-cases".

### 29.1 Message Flow

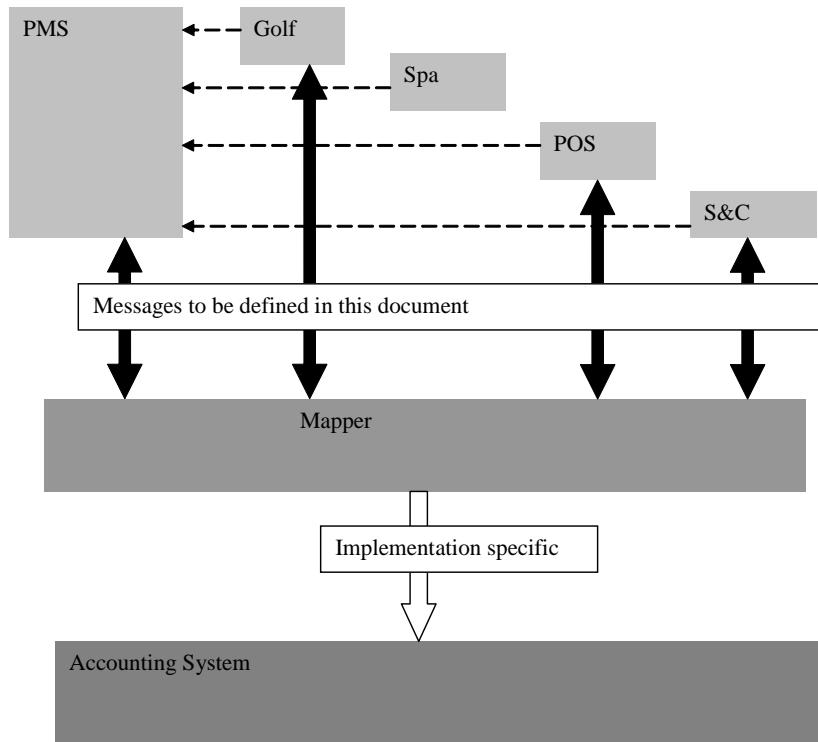

Figure 1 shows the message flow between systems in a heterogeneous hotel system landscape.

Messages generated by revenue capturing systems other than a PMS could be handled in two different ways:

A: They could first be sent to the PMS, be consolidated by the PMS, and then sent to the mapping layer.

B: They could be sent directly to the mapping layer, without being processed by the PMS. Evidently a mixture of both approaches would be possible.

The messages as defined in this document are supporting alternative B.

**Figure 1: Message Flow Diagram**

## Chapter 30 Message Overview

### 30.1 Predefined Dimensions

Dimensions are elements of the PostGL and PostStatistics message. Dimensions are used to transmit additional information related to the transaction codes. The set of dimensions and the related values is not restricted in this standard.

The following dimensions are understood as proposals for different types of revenue capturing systems.

#### Retail

Dimension	Value
RevenueCenter	Hotel specific name of a store
Shift	Time period within a whole day (e.g., am, pm)
CustomerType	E.g., resident, non-resident

#### F&B

Dimension	Value
RevenueCenter	Hotel specific name of a restaurant
RevenueCenterType	E.g., Bar, Self Service
Meal Period	E.g., Breakfast, Lunch, Dinner
CustomerType	E.g., resident, non-resident

#### Hotel

Dimension	Value
Market Segment	Luxury, Business
BookingSource	E.g., eMail, Phone, Walk in, Internet
RoomType	E.g., Single, Double, Suite
CustomerType	E.g., resident, non-resident

### Spa

Dimension	Value
ActivityType	E.g., Massage, Body_Treatment, Salon_Treatment
ProviderType	Internal, External, Therapist qualification
FacilityType	Pool, Sauna, Solarium
EquipmentType	

### Golf

Dimension	Value
CustomerType	E.g., resident, non-resident
Package	
GolfClub	
GolfCourse	
Feetype	E.g., Green fee, member fee

### Entertainment

Dimension	Value
CustomerType	E.g., resident, non-resident
Entertainment_type	E.g., Minigolf, Horse_Riding

## 30.2 Message Descriptions

### 30.2.1 PostGL

This message is used to send different kinds of accounting data (revenues, payments, adjustments).

**NOTE:** There is no cancel message. In order to reflect changes – e.g., in a folio after night audit – values may be negative or can be posted inverse by using the Debit/Credit Marker field in the message.

Top-Level Element	Second-Level Element	Type	Required	Comment
Header		Complex single occurrence	Yes	<p>This element has an attribute TransactionMode:</p> <p>TransactionMode='SingleSide' specifies, that the Back Office has to use the transaction_code contained in either in the credit- or debit element to build the complete posting record.</p> <p>TransactionMode='PostingRecord' specifies, that the accounts specified in the debit and credit elements are forming a posting record. In that case, only the element TransactionAccount Number should be used.</p>
	MessageNumber	String	Yes	<p>This element is used to prevent that a message is processed twice in the back office system.</p> <p>Each RCS has to supply a unique MessageNumber in every message (must be unique together with SourceSystemId).</p> <p>If the RCS wants to re-send a message due to transmission errors, the same MessageNumber as in the precent message has to be provided. The Back Office system checks if a message with the same MessageNumber has already been processed. If this is the case the message will be discarded and a positive response will be send.</p>
	PropertyCode	String	No	Only needed when multiple company codes have to be supported in accounting.
	TransactionDate	Datetime	Yes	To be used as posting date
	ServiceDate	Datetime	No	Date of service
	SourceSystemType	String	Yes	E.g., Hotel, Spa, Golf, Entertainment
	SourceSystemId	String	Yes	Unique Identifier for revenue capturing system
	User	String	No	User in sending system
	CustomerCode	String	No	Identification of debtor account
	Reservation#	String	No	Reservation number Is unique together with source system ID.
Transaction		Complex Multiple occurrence	Min 1	
	Credit	Complex Multiple occurrence	No	For allowed subelements see <b>Error! Reference source not found..</b>
	Debit	Complex Multiple occurrence	No	For allowed subelements see <b>Error! Reference source not found..</b>

Top-Level Element	Second-Level Element	Type	Required	Comment
	Dimension	Complex	No	<p>Subelements are the elements &lt;DimensionName&gt; and &lt;DimensionValue&gt;.</p> <p>Values of the elements DimensionName and DimensionValue are of data type STRING and not restricted. There are no mandatory values.</p> <p>For proposed dimension elements see Section 30.1.</p> <p>Example:</p> <pre>&lt;Dimension&gt; &lt;DimensionName&gt;MarketSegment&lt;/DimensionName&gt; &lt;DimensionValue&gt;Double &lt;/DimensionValue&gt; &lt;/Dimension&gt;&gt;</pre>
		String	No	DimensionName
		String	No	DimensionValue

#### Allowed Subelements for Debit and Credit Element

TransactionCode	String	No	Together with the dimensions, this field is used by the mapping system to determine the account number.
TransactionAccount Number	String	No	In case mapping has already been done by sender.
TransactionNumber	Number	No	Transaction in sending system
LineNumber	Number	No	Line of transaction in sending system
Amount	Number of decimals corresponding to currency	Yes	
Currency	Currency	Yes	As defined in ISO standard; e.g., USD, EUR
TransactionText	String	Yes	Reference text

#### 30.2.2 PostAR

Top Level	Second Level	Type	Required	Comment
Header		Complex		
	MessageNumber	String	Yes	See PostGL
	PropertyCode	String	No	Used if there are multiple properties.
	Date	String	Yes	

<b>Top Level</b>	<b>Second Level</b>	<b>Type</b>	<b>Required</b>	<b>Comment</b>
	SourceSystemType	String	Yes	E.g., Hotel, Spa, Golf, Entertainment
	SourceSystemId	String	Yes	Unique Identifier for revenue capturing system
	User	String	No	User in sending system
	CustomerCode	String	No	Is unique together with source system ID. For group Invoices, this element can be appear several times in the message.
	Reservation#	String	No	
Invoice		Complex		
	InvoiceNumber	String	No	Is not necessary if invoices are assigned a new number in the backoffice system.
	InvoiceDate	Datetime	No	Can default to system date if not specified.
	DueDate	Datetime	No	Can default to payment terms set up for customer in back office system
	TotalInvoice Amount	Number	Yes	This is the amount left to pay for the customer. It is the total invoice amount minus prepayments, intermediate payments etc.
	Currency	String	No	
	Dimension	Complex	No	Subelements are the elements <DimensionName> and <DimensionValue>. Values of the elements DimensionName and DimensionValue are of data type STRING and not restricted. There are no mandatory values. For proposed dimension elements, see Section 30.1. Example: <Dimension> <DimensionName>MarketSegment</DimensionName> <DimensionValue>Double </DimensionValue> </Dimension>

Top Level	Second Level	Type	Required	Comment
	Tax	Complex	No	<p>Subelements are &lt;TaxRate&gt;, &lt;TaxBase&gt;, &lt;TaxAmount&gt;, &lt;TaxType&gt;, and &lt;TaxIncluded&gt;.</p> <p>Example:</p> <pre>&lt;Tax&gt; &lt;Taxrate&gt;A1&lt;/TaxRate&gt; &lt;TaxBase&gt;45678&lt;/TaxBase&gt; &lt;TaxAmount&gt;1234&lt;/TaxAmount&gt; &lt;TaxIncluded&gt;TRUE&lt;/TaxIncluded&gt; &lt;/Tax&gt; &lt;Tax&gt; &lt;Taxrate&gt;A2&lt;/TaxRate&gt; &lt;TaxBase&gt;1234&lt;/TaxBase&gt; &lt;TaxAmount&gt;12 &lt;/TaxAmount&gt; &lt;TaxIncluded&gt;FALSE&lt;/TaxIncluded&gt; &lt;/Tax&gt;</pre> <p>The tax section is repeatable because in some countries (e.g., Belgium) the invoice may have only one invoice amount, but the invoice total may be split up over up to three different tax bases/rates/amounts.</p>
	Text	String	No	Comment text
	InvoiceLine	Complex	No	<p>This section can be used if detailed transaction lines are required rather than just the invoice total. Subelements are: &lt;LineNumber&gt; (e.g., 1), &lt;FolioNumber&gt;, &lt;Dimension&gt; (e.g., Room Revenue Corporate), &lt;Amount&gt; (e.g., \$100), &lt;Currency&gt; (e.g., USD), &lt;TransactionDate&gt; (e.g., 12 July 2007), &lt;ServiceDate&gt; (e.g., 13 July 2007), &lt;Text&gt; (e.g., room charge night of 12 July), &lt;Tax type&gt; (e.g., VAT 25%), &lt;Tax Rate&gt; (e.g., 25%), &lt;Tax Base&gt; (e.g., \$80), and &lt;Tax Amount&gt; (e.g., \$20).</p> <p>If this detailed InvoiceLine section is used, then obviously the sum of the line amounts needs to match the invoice total amount. Dimension, currency, date, and tax information specified at the line level overrides data specified at the invoice level.</p> <p><b>NOTE:</b> InvoiceLine can be used recursively; i.e., InvoiceLine can be a subelement of InvoiceLine.</p>

### 30.2.3 UpdateCustomerData

This message is used to update or create a customer as a debtor in the accounting system.

It contains the customer number as defined by the sender.

Top-Level Element	Second-Level Element	Type	Required	Comment
-------------------	----------------------	------	----------	---------

<b>Top-Level Element</b>	<b>Second-Level Element</b>	<b>Type</b>	<b>Required</b>	<b>Comment</b>
Header		complex		
	MessageNumber	String	Yes	See PostGL
	PropertyCode	String	No	Only needed when multiple company codes have to be supported in accounting.
	Date	Datetime	Yes	Posting date
	SourceSystemType	String	Yes	E.g., Hotel, Spa, Golf, Entertainment
	SourceSystemId	String	Yes	Unique Identifier for revenue capturing system
	User	String	No	User in sending system
	CustomerCode	string	Yes	
CustomerAddress		complex	Yes	See "Guest Profile Elements"
PersonName		complex	Yes	See "Guest Profile Elements"
BusinessTitle		string	Yes	See "Guest Profile Elements"
Phone		complex	No	See "Guest Profile Elements"
PreferenceList		complex	No	See "Guest Profile Elements"
InvoiceAddress n		complex	No	
ContactPerson		complex	No	

#### 30.2.4 **PostStatistics**

This message is used to post statistical data not belonging to a financial transaction.

<b>Top-Level Element</b>	<b>Second-Level Element</b>	<b>Type</b>	<b>Required</b>	<b>Comment</b>
Header				
	MessageNumber	String	Yes	See PostGL
	PropertyCode	String	No	Only needed when multiple company codes have to be supported in accounting.
	Date	Date time	Yes	Posting date
	SourceSystemType	String	Yes	E.g., Hotel, Spa
	SourceSystemId	String	Yes	Unique Identifier for revenue capturing system
	User	String	No	User in sending system

Top-Level Element	Second-Level Element	Type	Required	Comment
Statistic		Complex	Yes min. 1	<p>For proposed StatisticalDataName values see "<a href="#">Examples for Standard Statistical Data Names</a>"</p> <p>Example:</p> <pre>&lt;DataDescription&gt;   &lt;StatisticalDataName&gt;     Hotel_Number_of_Guests   &lt;/StatisticalDataName&gt;   &lt;StatisticalDataValue&gt;     8264   &lt;/StatisticalDataValue&gt; &lt;/DataDescription&gt;</pre>
	StatisticalData	Complex	yes	Subelements are <Description> and <Value>.
	Dimension	Complex	No	<p>Subelements are &lt;DimensionName&gt; and &lt;DimensionValue&gt;.</p> <p>For proposed dimension elements see Section 30.1.</p> <p>Example:</p> <pre>&lt;Dimension&gt;   &lt;DimensionName&gt;MarketSegment&lt;/DimensionName&gt;   &lt;DimensionValue&gt;Double&lt;/DimensionValue&gt; &lt;/Dimension&gt;</pre>

#### [Examples for Standard Statistical Data Names](#)

Hotel_Number_of_Guests	integer
Hotel_Number_of_Covers	integer
Hotel_Rooms_Available	integer
Hotel_Rooms_Out_of_order	integer
Hotel_Rooms_out_of_service	integer
Hotel_Rooms_occupied	integer
Hotel_Complementary_rooms	integer
Hotel_House_rooms	integer
Hotel_Number_of_Adults	integer
Hotel_Number_of_Children	integer
Hotel_Number_of_Groups	integer
Hotel_Number_of_Permanent-Guests	integer

Spa_Number_of_Walkins	integer
Spa_Number_of_Hotel_Guests	integer
Spa_Number_of_club_members	integer
Spa_Number_of_residence_guests	integer
Spa_Treatment_Room_Hours_Available	integer
Spa_Treatment_Room_Hours_Used	integer
Spa_Available_Treatment_Rooms	integer

### 30.2.5 GetMapping

This message can be used by the RCS to ask if the mapping system supports specific combination of transaction code and dimensions.

Top-Level Element	Second-Level Element	Third-Level Element	Type	Required	Comment
Header					
	MessageNumber		String	Yes	See PostGL
	PropertyCode		String	No	Only needed when multiple company codes have to be supported in accounting.
	Date		Date time	Yes	Posting date
	SourceSystemType		String	Yes	E.g., Hotel, Spa
	SourceSystemId		String	Yes	Unique Identifier for revenue capturing system
	User		String	No	User in sending system
Mapping			Complex, multiple	Yes min. 1	
	Code		string	yes	<p>Since there are different mappings for TransactionCodes and StatisticalDataNames, an attribute MappingType is used to differentiate between these mapping sets.</p> <p>The Attribute has two possible values: TransactionCode and StatisticalDataName.</p> <p>Example:</p> <pre>&lt;Code MappingType = 'TransactionCode'&gt; RoomRev &lt;/code&gt;</pre>

<b>Top-Level Element</b>	<b>Second-Level Element</b>	<b>Third-Level Element</b>	<b>Type</b>	<b>Required</b>	<b>Comment</b>
	Dimension		complex	No	For proposed dimension elements see Section 30.1. Example: <Dimension> <DimensionName> MarketSegment </DimensionName> <DimensionValue> Double </DimensionValue> </Dimension>
		Dimension Name	string	No	
		Dimension Value	string	No	
	Validation Result		complex	Min 1	Is provided in the response message.
		Credit Account Number	String	No	Example: <validationResult> <DebitAccountNumber> 611111 </DebitAccountNumber> <CreditAccountNumber>114456 </Credit AccountNumber> </validationresult>
		DebitAccountNumber	String	No	Example: <validationResult> <DebitAccountNumber> 611111 </DebitAccountNumber> <CreditAccountNumber>114456 </CreditAccountNumber> </validationresult>
		Credit Dimension	complex	No	Subelements are the elements <DimensionName> and <DimensionValue>. Example: <validationResult> <DimensionName>ProfitCenter</ProfitCenter> <DimensionValue>4711</DimensionValue> </validationresult>

Top-Level Element	Second-Level Element	Third-Level Element	Type	Required	Comment
		Debit Dimension	complex	No	<p>Subelements are the elements &lt;DimensionName&gt; and &lt;DimensionValue&gt;.</p> <p>Example:</p> <pre>&lt;validationResult&gt; &lt;DimensionName&gt;ProfitCenter&lt;/ProfitCenter&gt; &lt;DimensionValue&gt;4711&lt;/DimensionValue&gt; &lt;/validationresult&gt;</pre>

## Chapter 31 Message Specifications

### 31.1 Back Office Service

The WSDL for the HTNG Back Office Integrations System defines the “BackOfficeService” web service. This web service consists of five functions defined in one port type. All messages originate from the source revenue capturing system, and are transmitted to the accounting system. The port types are:

- **AccPortType** – Functions provided by the accounting system for posting various transactions.

#### 31.1.1 Supporting Schemas

The Back Office Web Service imports three schemas which define the data payloads required by the functional messages. These are:

- Common.xsd – Defines generic types used by various other elements.
- Name.xsd – Defines data types specific to a guest profile.
- Transaction.xsd – Defines general transaction elements.

Common elements used in several messages are included in Section 31.3.2.

#### 31.1.2 Soap Header

All messages must include a soap header that conforms to the WSAddressing and WSSecurity specifications. Receiving systems may optionally require that the wsa:To element match a specific destination address, and therefore, this element should be configurable at run time. In addition, all sending systems must identify themselves by specifying a wsa:From element unique for their system. Typically, this is in the form of “URN:<system>”. The wsa:ReplyTo address may be the anonymous form described in the August, 2004 specification.

WSSecurity may be optionally implemented. Providers are only required to support basic plain text authentication with a username and password. The user credentials will be limited to a single login per system, agreed between two vendors. There is no requirement to support multiple user logins from a single vendor through this interface.

#### 31.1.2.1 Sample Header Message

```
<soap:Header>
  <wsa:Action>http://htng.org/PWSWG/2006/08/SingleGuestItinerary#PostPayment</wsa:Action>
  <wsa:From>
    <wsa:Address>urn:SPASOFT</wsa:Address>
  </wsa:From>
  <wsa:MessageID>urn:uuid:e63d962e-94b6-434c-89ea-1c5ae2e0f8ba</wsa:MessageID>
  <wsa:ReplyTo>
    <wsa:Address>http://schemas.xmlsoap.org/ws/2004/08/addressing/role/anonymous</wsa:Address>
  </wsa:ReplyTo>
```

```
<wsa:To>http://www.micros.com/HTNGActivity/</wsa:To>
<wsse:Security soap:mustUnderstand="1">
<wsu:Timestamp wsu:Id="Timestamp-015e2941-114a-466e-87b6-8c431b9f5c44">
  <wsu:Created>2006-10-26T12:49:17Z</wsu:Created>
  <wsu:Expires>2006-10-26T12:54:17Z</wsu:Expires>
</wsu:Timestamp>
<wsse:UsernameToken xmlns:wsu="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-wssecurity-utility-1.0.xsd"
wsu:Id="SecurityToken-627f1ab1-338a-451f-9829-84f248e57ad8">
  <wsse:Username>HTNG</wsse:Username>
  <wsse:Password Type="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-username-token-profile-
1.0#PasswordText">HTNG</wsse:Password>

  <wsu:Created>2006-10-26T12:49:17Z</wsu:Created>
</wsse:UsernameToken>
</wsse:Security>
</soap:Header>
```

### 31.1.3 Asynchronous and Asynchronous Processing

The specification is originally designed to implement synchronous communication. In the future, the system may be extended to implement asynchronous processing, per standards established in the HTNG Framework 2.0 specification.

### 31.1.4 Mapping System

Inherent in any back office integration is the requirement of a mapping system which translates accounting (transaction) codes used in the source system to those of the accounting system. The mapping system may be provided as a layer of either the source system (e.g., the property management system) or by the accounting system. As an alternative, the mapping may be performed by a separate system. In any instance, it should act as a pass-through mechanism, adding account detail to the message.

### 31.1.5 Roles

There are various roles that interact with this interface. These are:

- Accounting System (ACC) – Collects summary or detailed information from various source systems.
- Mapping Layer (MAP) – Translates account identifiers in the source system to equivalent items in the accounting system.
- Revenue Capturing System (RCS) – Generic system generating source transactions. Examples include:
  - Property Management System (PMS) – Generates source transactions from a hotel property which are passed to the accounting system either in detail form or as summary information.
  - Point of Sale System (POS) – Generates source transactions from a point of sale collection system which are passed to the accounting system.
  - Activity (ACT) – Generates source transactions from entities such as a spa or golf booking system.

## 31.2 Acc Port Type

The Acc port is provided by the accounting system in order to provide a means to post various transactions generated in a source system. The functions provided are:

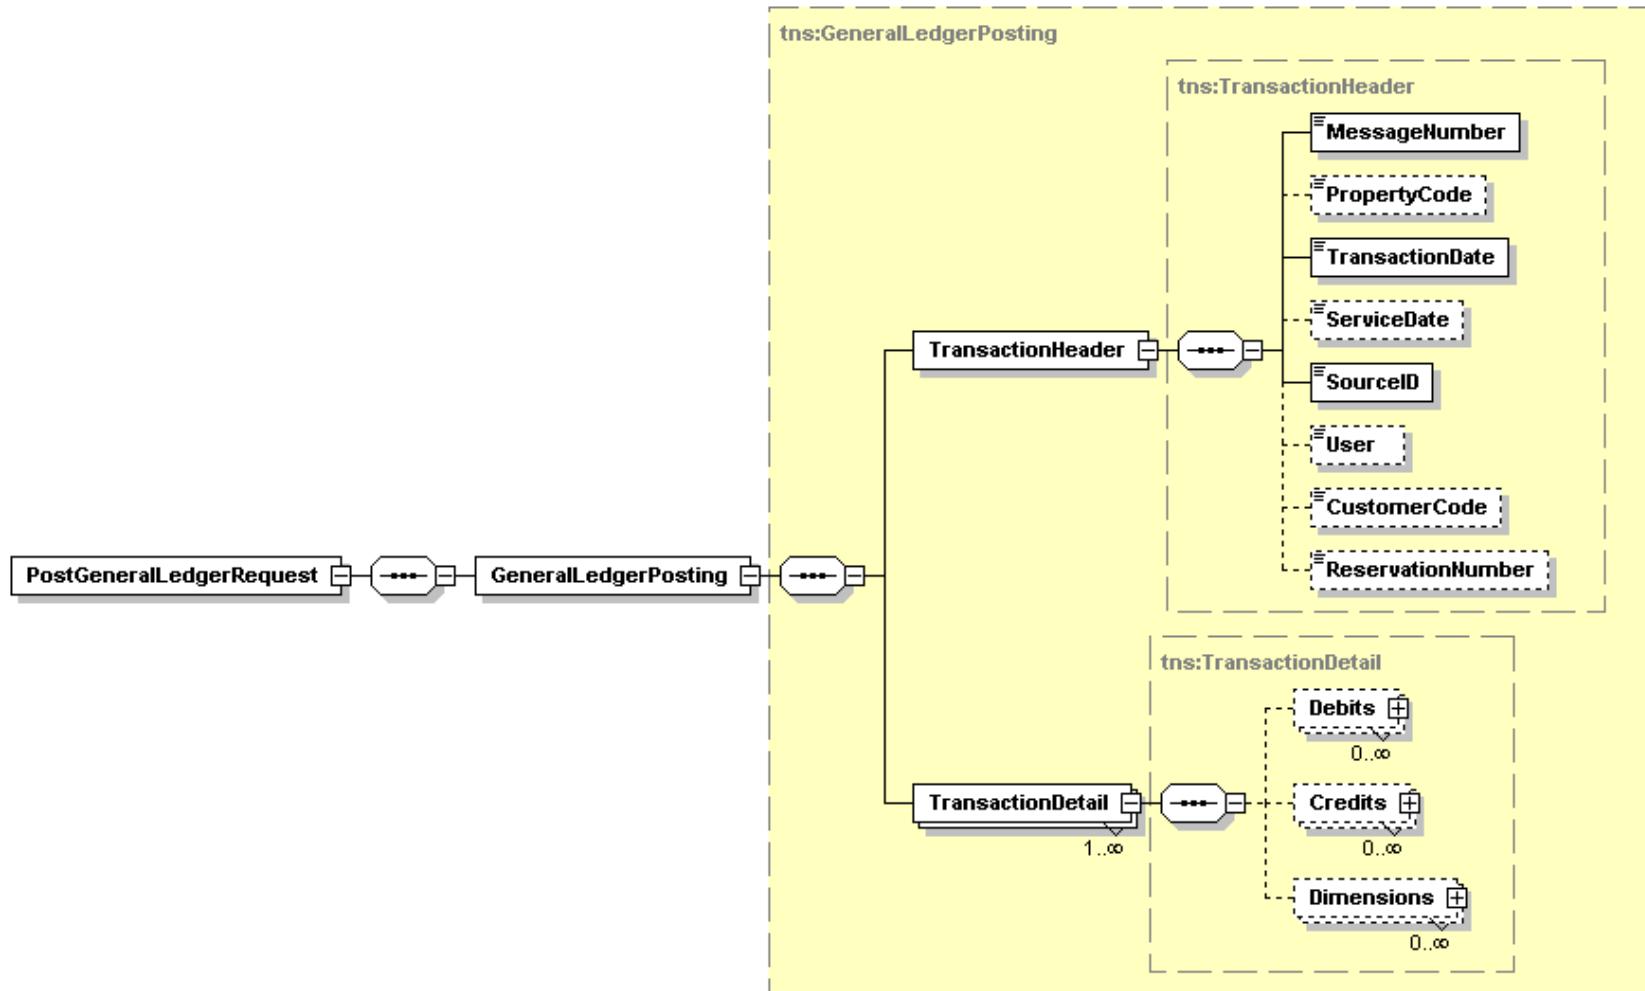

- **PostGeneralLedger** – Post generic transaction to the accounting system.
- **PostAccountsReivable** – Post invoices to the accounting system.
- **UpdateCustomer** – Send customer information to the accounting system.
- **PostStatistics** – Send statistical information to the accounting system.
- **GetMapping** – Request validation of mapping from the accounting system.

### 31.2.1 Post General Ledger

The Post General Ledger function sends transactional information from the source revenue capturing system to the accounting system. This may be done on an individual transaction basis, or as summary postings. For instance, a hotel might post all of its revenue and payments as a daily summary created during the night audit process. The result returned from this message is a ResultStatus response as defined in Section 31.3.

<b>Port</b>	AccPortType
<b>Binding</b>	AccBinding
<b>Operation</b>	PostGeneralLedger
<b>Soap Action</b>	<a href="http://htng.org/PWSWG/2007/09/BackOfficeIntegration#PostGeneralLedger">http://htng.org/PWSWG/2007/09/BackOfficeIntegration#PostGeneralLedger</a>
<b>Input</b>	PostGeneralLedgerRequest
<b>Output</b>	PostGeneralLedgerResponse
<b>Primary Schema</b>	Transactoin.xsd

### 31.2.1.1 PostGeneralLedgerRequest

```
<xs:element name="PostGeneralLedgerRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="GeneralLedgerPosting" xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
        type="q1:GeneralLedgerPosting" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

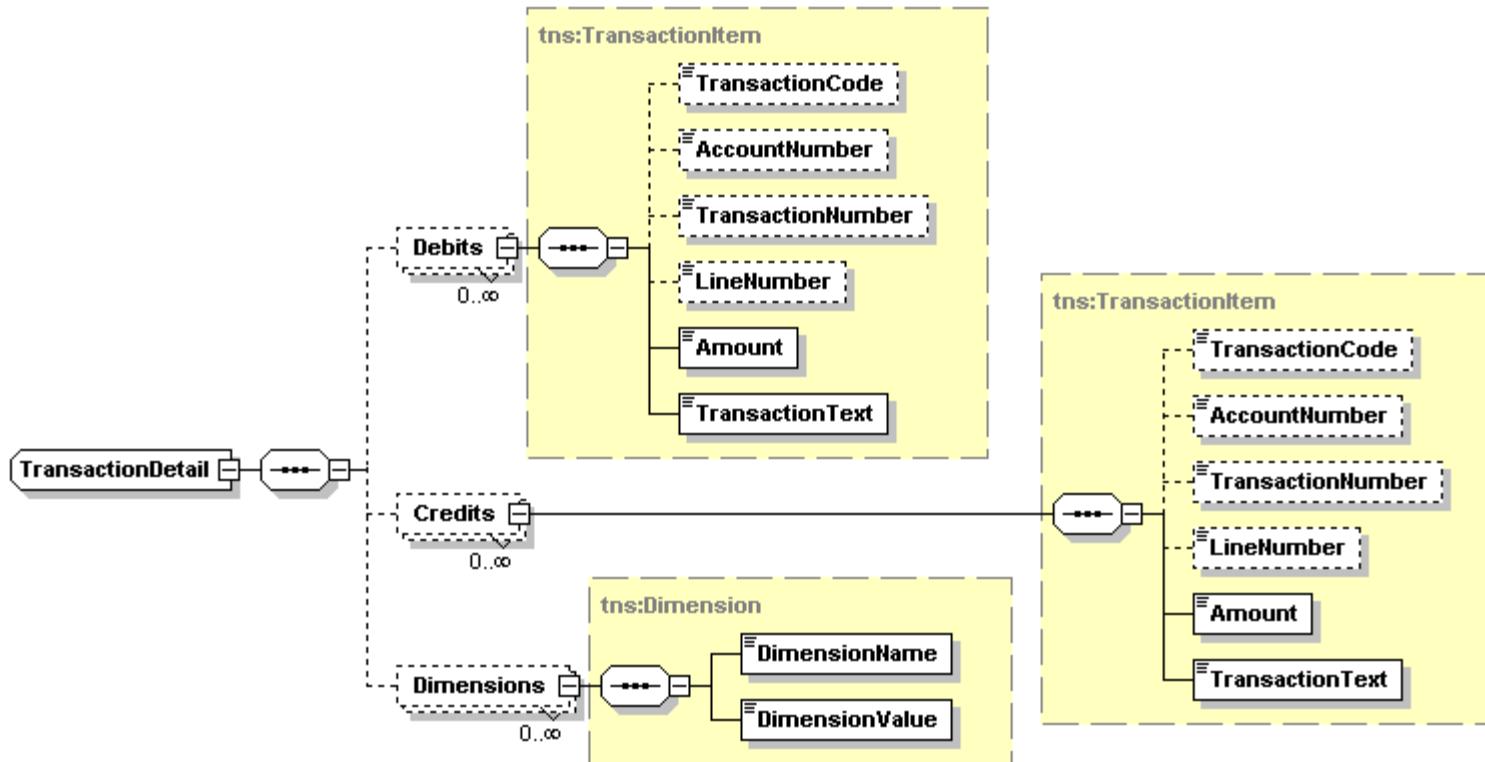

Name	Type	Data Type	Use	Comments
GeneralLedgerPosting	element	GeneralLedgerPosting	required	General ledger posting transaction

### 31.2.1.2 GeneralLedgerPosting

```
<xs:complexType name="GeneralLedgerPosting">
  <xs:sequence>
    <xs:element name="TransactionHeader" xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
      type="q1:TransactionHeader" />
    <xs:element maxOccurs="unbounded" name="TransactionDetail" xmlns:q2="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
      type="q2:TransactionDetail" />
  </xs:sequence>
  <xs:attribute name="TransactionMode" xmlns:q3="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q3:TransactionMode"
    use="required" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
TransactionMode	attribute	TransactionMode	required	Either SingleSide or PostingRecord to indicate the type of posting.
TransactionHeader	element	TransactionHeader	required	Transaction header (see Section 31.3)
TransactionDetail	element	TransactionDetail	required/multiple	Transaction detail.

### 31.2.1.3 TransactionDetail

```

<xs:complexType name="TransactionDetail">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Debits"
      xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q1:TransactionItem" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Credits"
      xmlns:q2="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q2:TransactionItem" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Dimensions"
      xmlns:q3="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q3:Dimension" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
Debits	element	TransactionItem	optional/ multiple	Debit(s) for the transaction.
Credits	element	TransactionItem	optional/ multiple	Credit(s) for the transaction.

Dimensions	element	Dimension	optional/ multiple	Additional dimensions related to the transaction. The accounting system may use this information in conjunction with the transaction code in order to determine the appropriated account to post to.
------------	---------	-----------	-----------------------	--

### 31.2.1.4 TransactionItem

```
<xs:complexType name="TransactionItem">
  <xs:sequence>
    <xs:element minOccurs="0" name="TransactionCode" type="xs:string" />
    <xs:element minOccurs="0" name="AccountNumber" type="xs:string" />
    <xs:element minOccurs="0" name="TransactionNumber" type="xs:string" />
    <xs:element minOccurs="0" name="LineNumber" type="xs:string" />
    <xs:element name="Amount" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:Amount" />
    <xs:element name="TransactionText" type="xs:string" />
  </xs:sequence>
</xs:complexType>
```

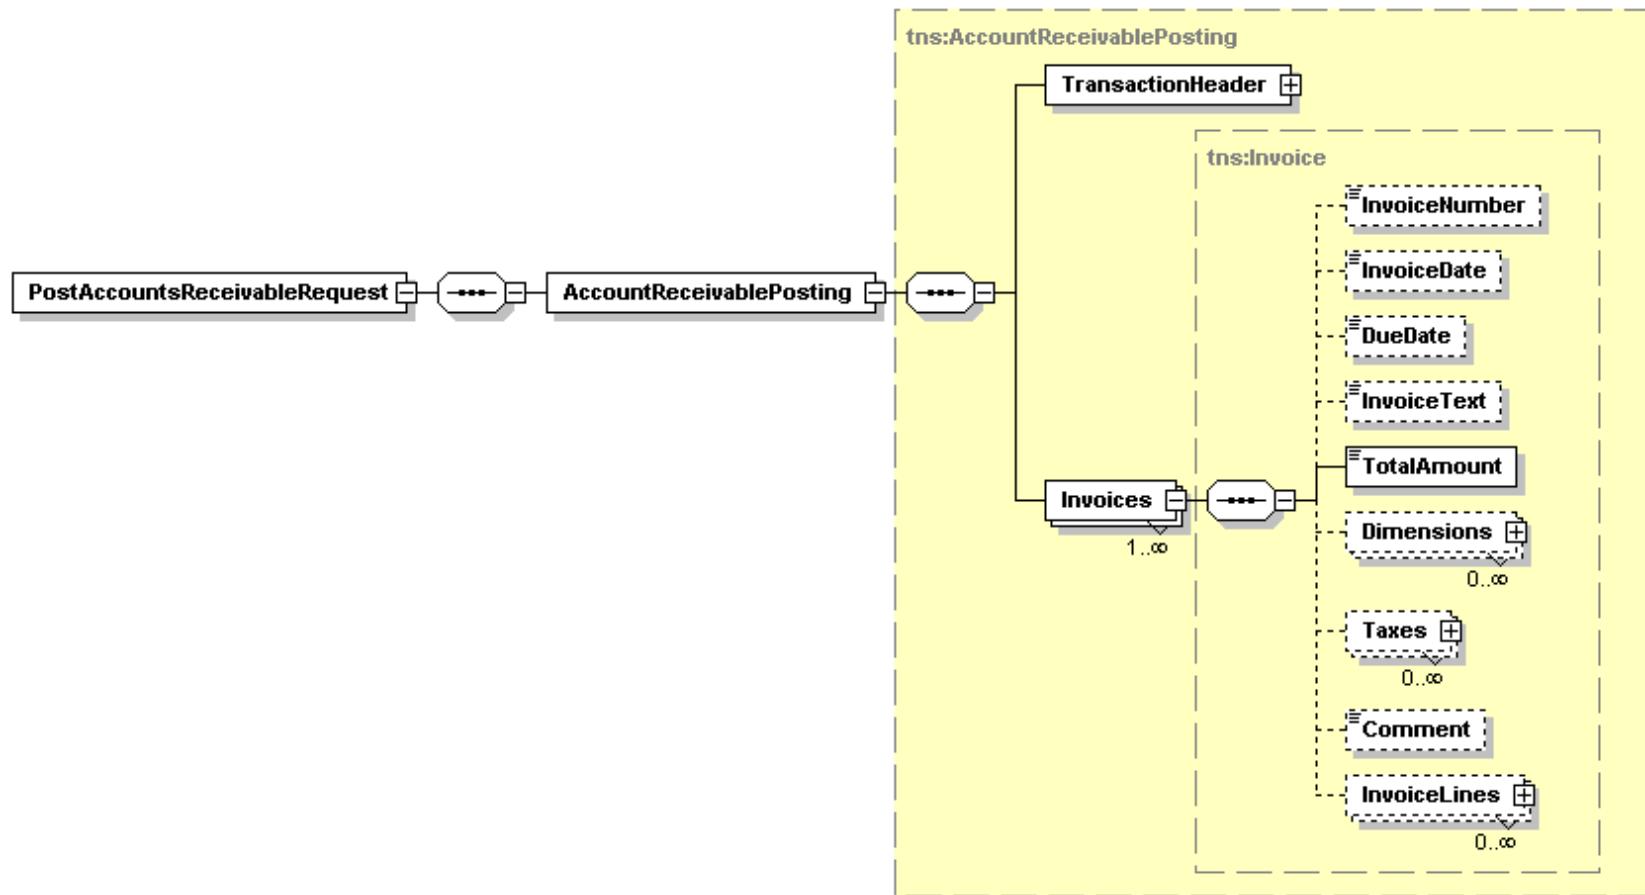

Name	Type	Data Type	Use	Comments
TransactionCode	element	string	optional	Transaction code. The accounting system may combine dimensional data to determine the appropriate account.
AccountNumber	element	string	optional	Account number. Either the transaction code or the account number must be present.
TransactionNumber	element	string	optional	Transaction number.
LineNumber	element	string	optional	Line number.
Amount	element	Amount	required	Amount of the transaction.
TransactionText	element	string	required	Descriptive text for the transaction.

### 31.2.2 Post Accounts Receivable

The Post Accounts Receivable function is used to send invoice details to the accounting system.

Port	AccPortType
Binding	AccBinding
Operation	PostAccountsReceivable
Soap Action	<a href="http://htng.org/PWSWG/2007/09/BackOfficeIntegration#PostAccountsReceivable">http://htng.org/PWSWG/2007/09/BackOfficeIntegration#PostAccountsReceivable</a>
Input	PostAccountsReceivableRequest
Output	PostAccountsReceivableResponse
Primary Schema	Transactoin.xsd

### 31.2.2.1 PostAccountsReceivableRequest

```
<xs:element name="PostAccountsReceivableRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="AccountReceivablePosting" xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
        type="q1:AccountReceivablePosting" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

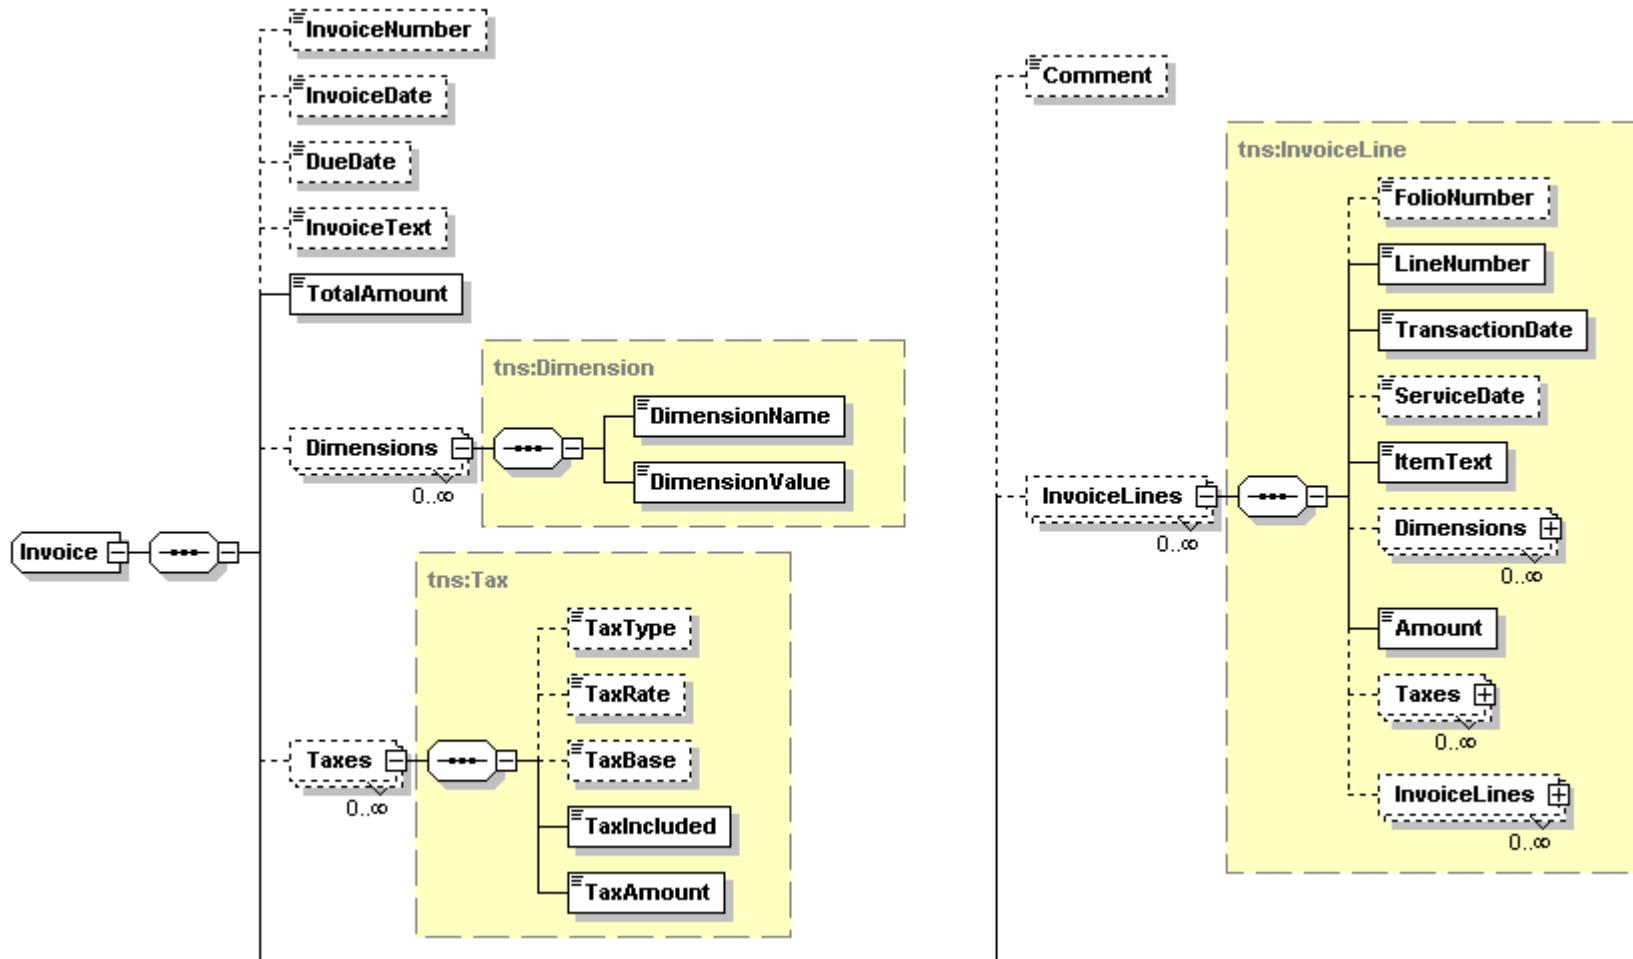

Name	Type	Data Type	Use	Comments
AccountReceivablePosting	element	AccountReceivablePosting	required	The account receivable transaction record.

### 31.2.2.2 AccountReceivablePosting

```
<xs:complexType name="AccountReceivablePosting">
  <xs:sequence>
    <xs:element name="TransactionHeader" xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
      type="q1:TransactionHeader" />
    <xs:element maxOccurs="unbounded" name="Invoices" xmlns:q2="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
      type="q2:Invoice" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
TransactionHeader	element	TransactionHeader	required	Transaction header (see Section 31.3)
Invoices	element	Invoice	required/ multiple	One or more invoice records.

### 31.2.2.3 Invoice

```

<xs:complexType name="Invoice">
  <xs:sequence>
    <xs:element minOccurs="0" name="InvoiceNumber" type="xs:string" />
    <xs:element minOccurs="0" name="InvoiceDate" type="xs:dateTime" />
    <xs:element minOccurs="0" name="DueDate" type="xs:dateTime" />
    <xs:element minOccurs="0" name="InvoiceText" type="xs:string" />
    <xs:element name="TotalAmount" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:Amount" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Dimensions"
      xmlns:q2="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q2:Dimension" />

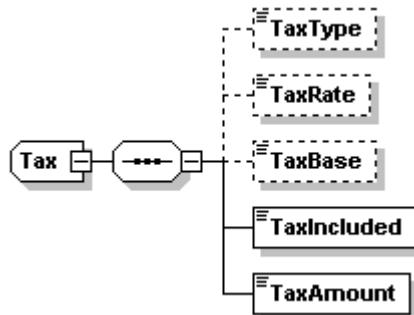

```

```

<xs:element minOccurs="0" maxOccurs="unbounded" name="Taxes"
    xmlns:q3="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q3:Tax" />
<xs:element minOccurs="0" name="Comment" type="xs:string" />
<xs:element minOccurs="0" maxOccurs="unbounded" name="InvoiceLines"
    xmlns:q4="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q4:InvoiceLine" />
</xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
InvoiceNumber	element	string	optional	The invoice number.
InvoiceDate	element	dateTime	optional	The invoice date.
DueDate	element	dateTime	optional	The due date.
InvoiceText	element	string	optional	Invoice text.
TotalAmount	element	Amount	required	The total invoice amount.
Dimensions	element	Dimension	optional/multiple	Additional statistical information.
Taxes	element	Tax	optional/multiple	Optional tax records associated with the invoice.
Comment	element	string	optional	Additional comments.
InvoiceLines	element	InvoiceLine	optional/multiple	Invoice detail records. These are not required if only invoice totals are posted.

### 31.2.2.4 Tax

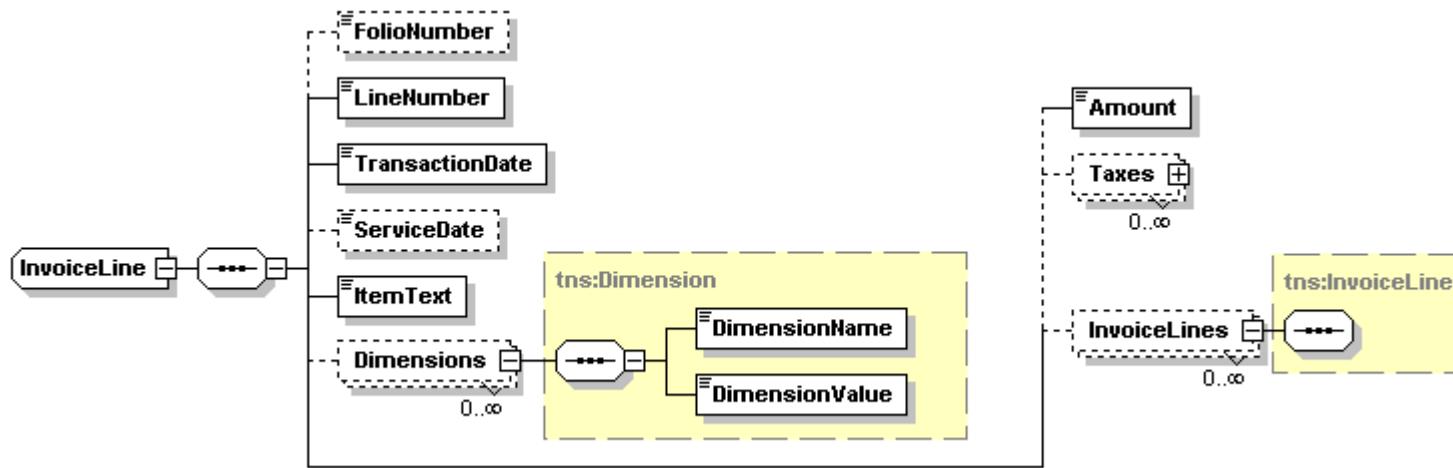

```

<xs:complexType name="Tax">
<xs:sequence>
<xs:element minOccurs="0" name="TaxType" type="xs:string" />
<xs:element minOccurs="0" name="TaxRate" type="xs:string" />
<xs:element minOccurs="0" name="TaxBase" type="xs:string" />
<xs:element name="TaxIncluded" type="xs:boolean" />
<xs:element name="TaxAmount" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:Amount" />
</xs:sequence>
</xs:complexType>
```

</xs:sequence> </xs:complexType>				
Name	Type	Data Type	Use	Comments
TaxType	element	string	optional	Tax type
TaxRate	element	string	optional	Tax rate
TaxBase	element	string	optional	Tax base amount
TaxIncluded	element	boolean	required	Indicator whether tax is included in amount or in addition.
TaxAmount	element	Amount	required	Tax amount

### 31.2.2.5 InvoiceLine

```

<xs:complexType name="InvoiceLine">
  <xs:sequence>
    <xs:element minOccurs="0" name="FolioNumber" type="xs:string" />
    <xs:element name="LineNumber" type="xs:int" />
    <xs:element name="TransactionDate" type="xs:dateTime" />
    <xs:element minOccurs="0" name="ServiceDate" type="xs:dateTime" />
    <xs:element name="ItemText" type="xs:string" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Dimensions"
      xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q1:Dimension" />
    <xs:element name="Amount" xmlns:q2="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q2:Amount" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Taxes"
      xmlns:q3="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q3:Tax" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="InvoiceLines"
      xmlns:q4="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q4:InvoiceLine" />
  </xs:sequence>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
FolioNumber	element	string	optional	Folio number
LineNumber	element	int	required	Line number
TransactionDate	element	dateTime	required	Transaction date
ServiceDate	element	dateTime	optional	Actual service date
ItemText	element	string	required	Item text
Dimensions	element	Dimension	optional/multiple	Additional dimensional data
Amount	element	Amount	required	Item amount
Taxes	element	Tax	optional/multiple	Tax details
InvoiceLines	element	InvoiceLine	optional/multiple	Recursive invoice line items

### 31.2.3 Update Customer

The Update Customer function allows a revenue capturing system to notify the accounting system when a change occurs in a customer record.

<b>Port</b>	AccPortType
<b>Binding</b>	AccBinding
<b>Operation</b>	UpdateCustomer
<b>Soap Action</b>	<a href="http://htng.org/PWSWG/2007/09/BackOfficeIntegration#UpdateCustomer">http://htng.org/PWSWG/2007/09/BackOfficeIntegration#UpdateCustomer</a>
<b>Input</b>	UpdateCustomerRequest
<b>Output</b>	UpdateCustomerResponse
<b>Primary Schema</b>	Transactoin.xsd

#### 31.2.3.1 UpdateCustomerRequest

```
<xs:element name="UpdateCustomerRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="CustomerUpdate" xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
        type="q1:CustomerUpdate" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
CustomerUpdate	element	CustomerUpdate	required	Customer update information.

### 31.2.3.2 CustomerUpdate

```
<xs:complexType name="CustomerUpdate">
  <xs:sequence>
    <xs:element name="TransactionHeader" xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
      type="q1:TransactionHeader" />
    <xs:element maxOccurs="unbounded" name="Profile" xmlns:q2="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q2:Profile" />
  </xs:sequence>
</xs:complexType>
```

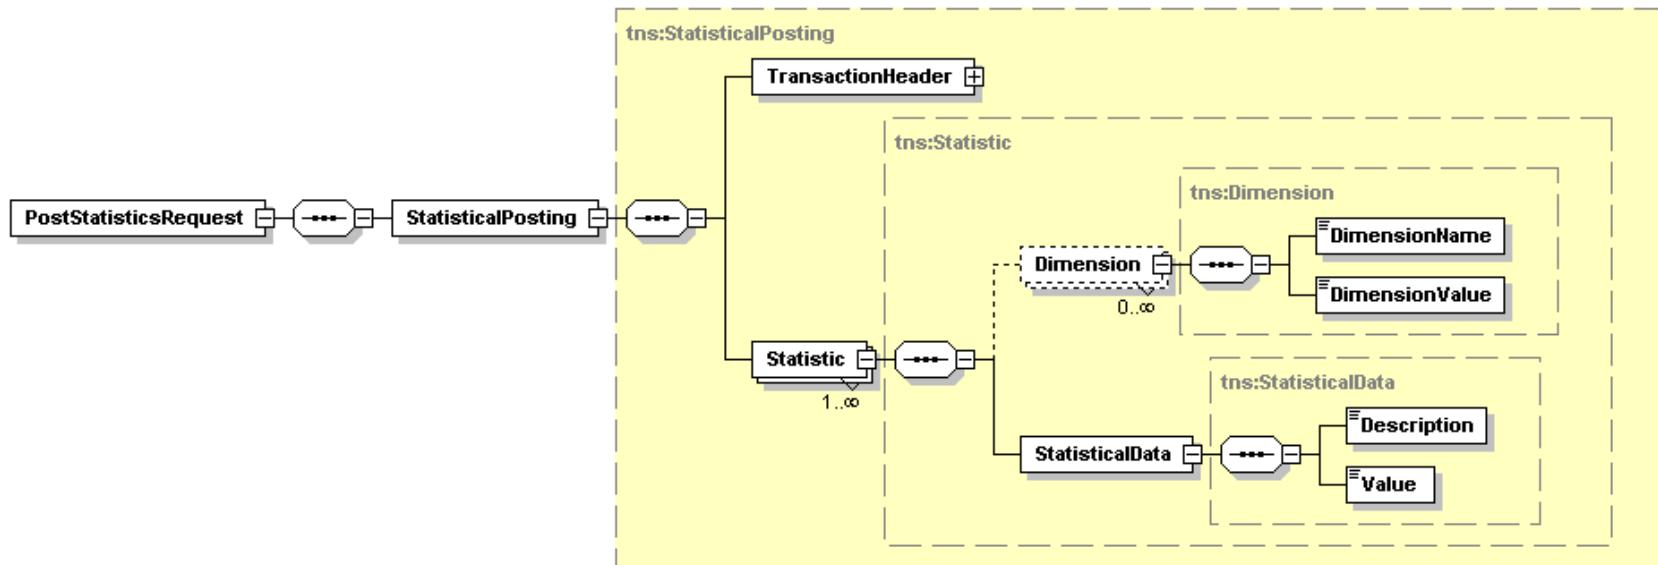

Name	Type	Data Type	Use	Comments
TransactionHeader	element	TransactionHeader	required	Transaction header (see Section 31.3)
Profile	element	Profile	required/multiple	Customer profile data (see Section 31.3).

### 31.2.4 Post Statistics

A revenue capturing system may post various statistical information to the accounting system.

Port	AccPortType
Binding	AccBinding
Operation	PostStatistics

Output	PostStatisticsResponse
Primary Schema	Transactoin.xsd

### 31.2.4.1 PostStatisticsRequest

```

<xs:element name="PostStatisticsRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="StatisticalPosting" xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
        type="q1:StatisticalPosting" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

Name	Type	Data Type	Use	Comments
StatisticalPosting	element	StatisticalPosting	required	Statistic record

### 31.2.4.2 StatisticalPosting

```

<xs:complexType name="StatisticalPosting">
  <xs:sequence>
    <xs:element name="TransactionHeader" xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
      type="q1:TransactionHeader" />
    <xs:element maxOccurs="unbounded" name="Statistic" xmlns:q2="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
      type="q2:Statistic" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
TransactionHeader	element	TransactionHeader	required	Transaction header (see Section 31.3)

Statistic	element	Statistic	required/ multiple	Collection of Statistic records
-----------	---------	-----------	-----------------------	---------------------------------

### 31.2.4.3 Statistic

```
<xs:complexType name="Statistic">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Dimension"
      xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q1:Dimension" />
    <xs:element name="StatisticalData" xmlns:q2="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q2:StatisticalData" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Dimension	element	Dimension	optional/ multiple	Dimension records applied to the statistic.
StatisticalData	element	StatisticalData	required	Statistical data record.

### 31.2.4.4 StatisticalData

```
<xs:complexType name="StatisticalData">
  <xs:sequence>
    <xs:element name="Description" type="xs:string" />
    <xs:element name="Value" type="xs:string" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Description	element	string	required	Description of the statistical value.
Value	element	string	required	Statistical value.

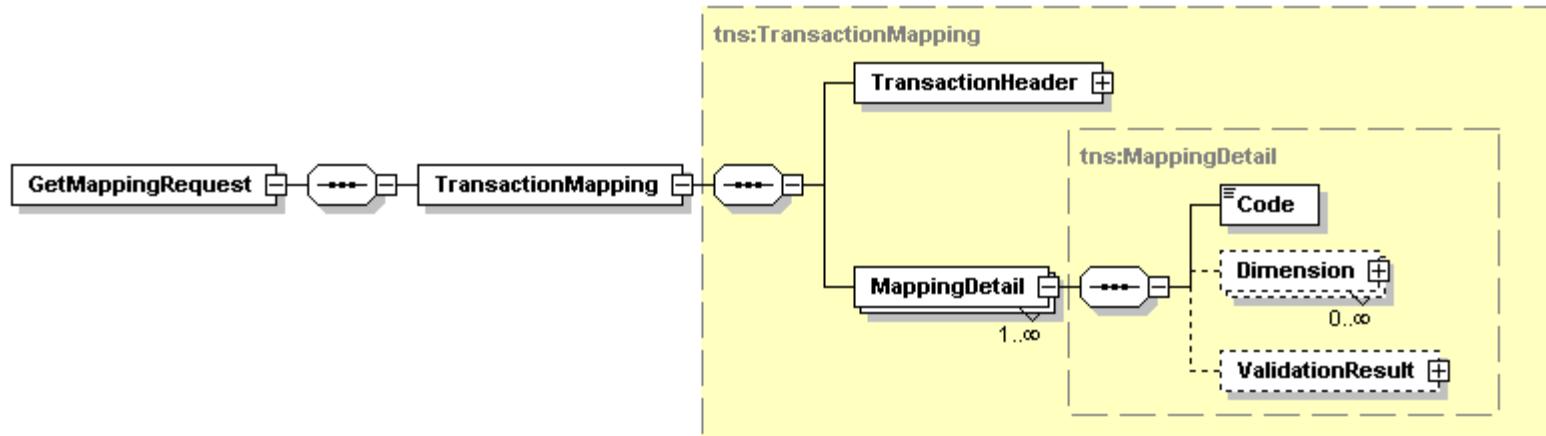

### 31.2.5 Get Mapping

The mapping system needs to link transaction codes used in the revenue capturing system to account codes used in the accounting system. The RCS sends a Get Mapping message to list all of its transaction codes in order to validate that they are all mapped in the accounting system. The accounting system returns the completed map in the response. This is most likely implemented as an iterative process until all transaction codes are completely mapped.

Input	GetMappingRequest

<b>Output</b>	GetMappingResponse
<b>Primary Schema</b>	Transactoin.xsd

### 31.2.5.1 GetMappingRequest

```

<xs:element name="GetMappingRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="TransactionMapping" xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
        type="q1:TransactionMapping" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

Name	Type	Data Type	Use	Comments
TransactionMapping	element	TransactionMapping	required	Transaction code mapping

### 31.2.5.2 TransactionMapping

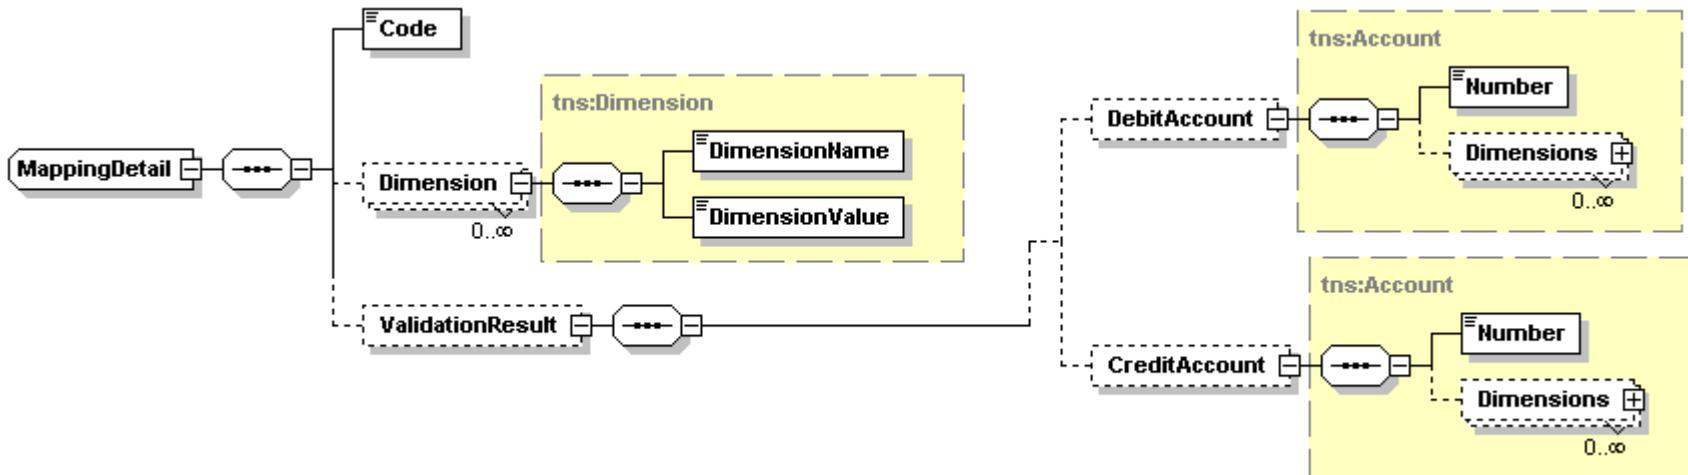

```

<xs:complexType name="TransactionMapping">
  <xs:sequence>
    <xs:element name="TransactionHeader" xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
      type="q1:TransactionHeader" />
    <xs:element maxOccurs="unbounded" name="MappingDetail" xmlns:q2="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
      type="q2:MappingDetail" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
TransactionHeader	element	TransactionHeader	required	Transaction header (see Section 31.3)

MappingDetail	element	MappingDetail	required/ multiple	Mapping details
---------------	---------	---------------	-----------------------	-----------------

### 31.2.5.3 MappingDetail

```

<xs:complexType name="MappingDetail">
  <xs:sequence>
    <xs:element name="Code">
      <xs:complexType>
        <xs:simpleContent>
          <xs:extension base="xs:string">
            <xs:attribute name="mappingType" />
          </xs:extension>
        </xs:simpleContent>
      </xs:complexType>
    </xs:element>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Dimension"
      xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q1:Dimension" />
    <xs:element minOccurs="0" name="ValidationResult">
      <xs:complexType>
        <xs:sequence>
          <xs:element minOccurs="0" name="DebitAccount" xmlns:q2="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
            type="q2:Account" />
          <xs:element minOccurs="0" name="CreditAccount" xmlns:q3="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
            type="q3:Account" />
        </xs:sequence>
      </xs:complexType>
    </xs:element>
  </xs:sequence>

```

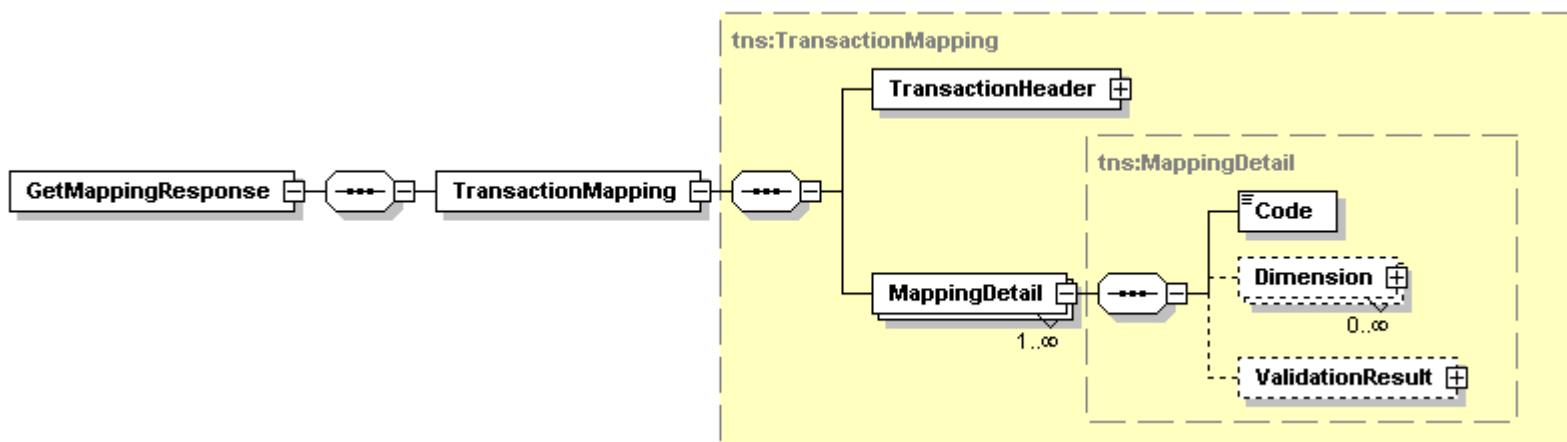

<xs:attribute name="mapped" type="xs:boolean" use="optional" /> </xs:complexType>				
Name	Type	Data Type	Use	Comments
mapped	attribute	boolean	optional	Flag to indicate if transaction code is mapped.
Code	element		required	Transaction or other code in revenue capturing system. Includes attribute ("mappingType") which defines type of code. "TransactionCode" is one valid type.
Dimension	element	Dimension	optional/multiple	Dimensional details.
ValidationResult	element		optional	Accounting system mapped account numbers.

### 31.2.5.4 Account

```
<xs:complexType name="Account">
  <xs:sequence>
    <xs:element name="Number" type="xs:string" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="Dimensions"
      xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types" type="q1:Dimension" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Number	element	string	required	Account number.
Dimensions	element	Dimension	optional/multiple	Account dimensions.

### 31.2.5.5 GetMappingResponse

```
<xs:element name="GetMappingResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="TransactionMapping" xmlns:q1="http://htng.org/PWSWG/2007/09/BackOfficeIntegration/Transaction/Types"
        type="q1:TransactionMapping" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
TransactionMapping	element	TransactionMapping	required	Resultant map.

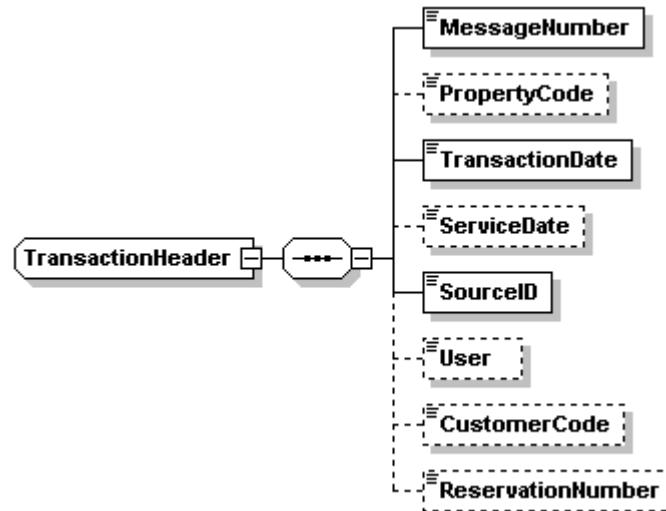

### 31.3 Common Data Elements

The Back Office Integration Web Service messages share several common data elements. These are consolidated here for reference.

#### 31.3.1 Transaction Schema (Transaction.xsd)

##### 31.3.1.1 TransactionHeader

The Transaction Header is common to all messages posted to the accounting system. It identifies the source of the posting (which may be beyond the message source included in the WSAddressing header), the date of the transaction, and additional relevant information.

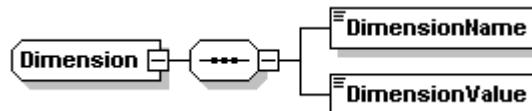

```
<xs:complexType name="TransactionHeader">
  <xs:sequence>
```

```

<xs:element name="MessageNumber" type="xs:string" />
<xs:element minOccurs="0" name="PropertyCode" type="xs:string" />
<xs:element name="TransactionDate" type="xs:dateTime" />
<xs:element minOccurs="0" name="ServiceDate" type="xs:dateTime" />
<xs:element name="SourceID" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:UniqueID" />
<xs:element minOccurs="0" name="User" type="xs:string" />
<xs:element minOccurs="0" name="CustomerCode" type="xs:string" />
<xs:element minOccurs="0" name="ReservationNumber" type="xs:string" />
</xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
MessageNumber	element	string	required	Unique message number for transaction.
PropertyCode	element	string	optional	Property code.
TransactionDate	element	dateTime	required	Transaction date.
ServiceDate	element	dateTime	optional	Actual service date.
SourceID	element	UniqueID	required	Source identifier.
User	element	string	optional	User code.
CustomerCode	element	string	optional	Customer code.
ReservationNumber	element	string	optional	Reservation number.

### 31.3.1.2 Dimension

```

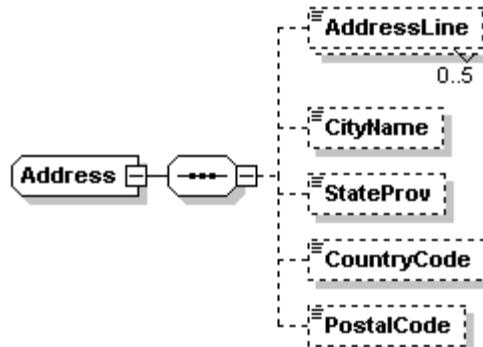

<xs:complexType name="Dimension">
  <xs:sequence>
    <xs:element name="DimensionName" type="xs:string" />
    <xs:element name="DimensionValue" type="xs:string" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
DimensionName	element	string	required	
DimensionValue	element	string	required	

### 31.3.2 Common Schema Elements (Common.xsd)

Namespace	http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types
-----------	---

### 31.3.2.1 Address

```
<xs:complexType name="Address">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="5" name="AddressLine" type="xs:string" />
    <xs:element minOccurs="0" name="CityName" type="xs:string" />
    <xs:element minOccurs="0" name="StateProv" type="xs:string" />
    <xs:element minOccurs="0" name="CountryCode" type="xs:string" />
    <xs:element minOccurs="0" name="PostalCode" type="xs:string" />
  </xs:sequence>
  <xs:attribute name="addressType" type="xs:string" />
  <xs:attribute name="otherAddressType" type="xs:string" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
addressType	attribute	string	none	Type of address. Typical values are HOME or BUSINESS, but any internally defined value may be used.
otherAddressType	attribute	string	none	Not currently used.
AddressLine	element	string	optional/multiple	Up to five address lines may be specified.
CityName	element	string	optional	City.
StateProv	element	string	optional	State.
CountryCode	element	string	optional	Country.
PostalCode	element	string	optional	Postal code.

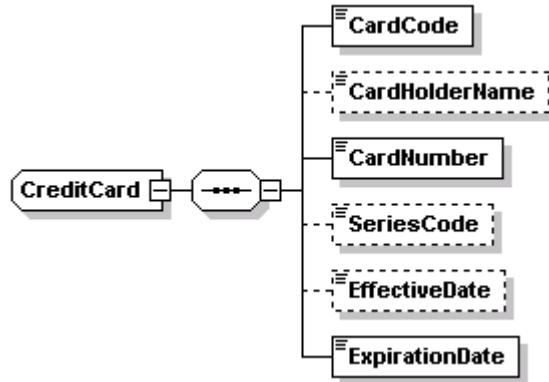

### 31.3.2.2 Amount

```
<xs:complexType name="Amount">
  <xs:simpleContent>
    <xs:extension base="xs:double">
      <xs:attribute name="currencyCode" type="xs:string" />
    </xs:extension>
  </xs:simpleContent>
</xs:complexType>
```

```
</xs:simpleContent>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Amount	extension	double		The denominational amount.
currencyCode	attribute	string	none	The currency code the amount is expressed in.

### 31.3.2.3 CreditCard

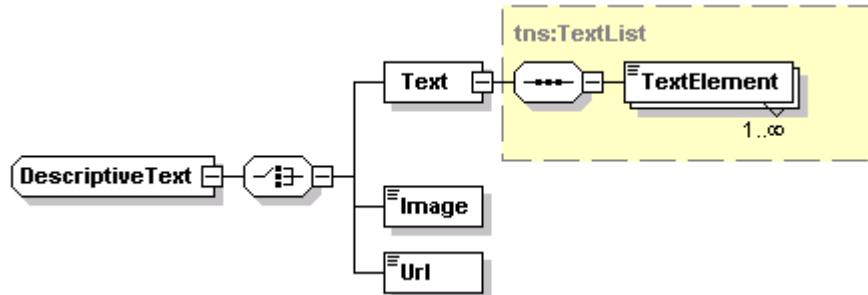

```
<xs:complexType name="CreditCard">
  <xs:sequence>
    <xs:element name="CardCode" type="xs:string" />
    <xs:element minOccurs="0" name="CardHolderName" type="xs:string" />
    <xs:element name="CardNumber" type="xs:string" />
    <xs:element minOccurs="0" name="SeriesCode" type="xs:string" />
    <xs:element minOccurs="0" name="EffectiveDate" type="xs:date" />
    <xs:element name="ExpirationDate" type="xs:date" />
  </xs:sequence>
  <xs:attribute name="cardType" type="xs:string" />
  <xs:attribute name="otherCardType" type="xs:string" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
cardType	attribute	string	none	Credit card type.
otherCardType	attribute	string	none	Not used.
CardCode	element	string	required	Credit card code.
CardHolderName	element	string	optional	Card holder name.
CardNumber	element	string	required	Credit card number.
SeriesCode	element	string	optional	Not used.

EffectiveDate	element	date	optional	Effective date.
ExpirationDate	element	date	required	Expiration date.

### 31.3.2.4 DescriptiveText

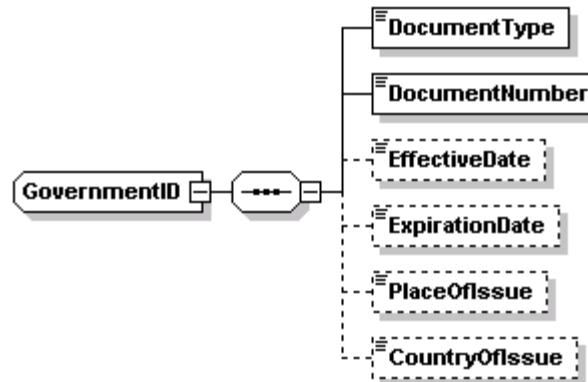

```

<xs:complexType name="DescriptiveText">
  <xs:choice>
    <xs:element name="Text" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:TextList" />
    <xs:element name="Image" type="xs:string" />
    <xs:element name="Url" type="xs:anyURI" />
  </xs:choice>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
Text	element	TextList	required	Collection of Text elements (Choice)
Image	element	string	required	Image value (Choice).
Url	element	anyURI	required	URL (Choice).

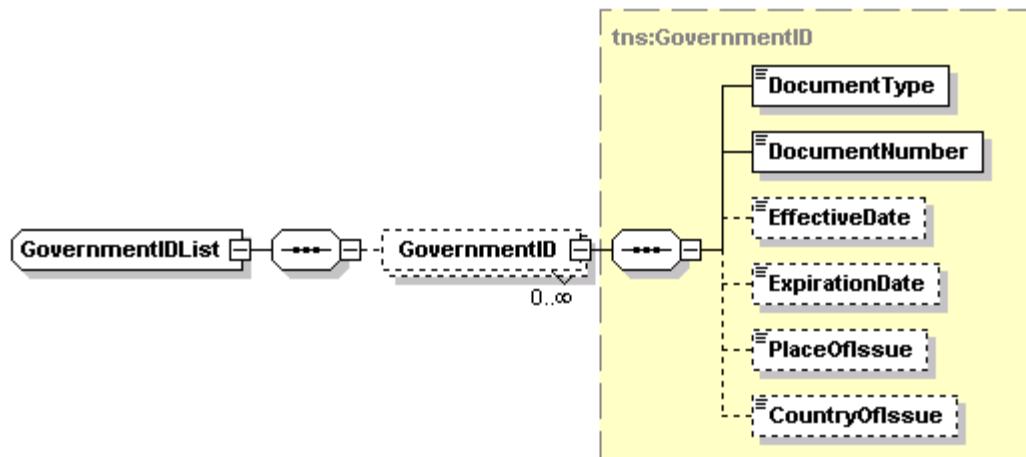

### 31.3.2.5 GovernmentID

```
<xs:complexType name="GovernmentID">
  <xs:sequence>
    <xs:element name="DocumentType" type="xs:string" />
    <xs:element name="DocumentNumber" type="xs:string" />
    <xs:element minOccurs="0" name="EffectiveDate" type="xs:date" />
    <xs:element minOccurs="0" name="ExpirationDate" type="xs:date" />
    <xs:element minOccurs="0" name="PlaceOfIssue" type="xs:string" />
    <xs:element minOccurs="0" name="CountryOfIssue" type="xs:string" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
DocumentType	element	string	required	The type of document (e.g., PASSPORT).
DocumentNumber	element	string	required	The document number.
EffectiveDate	element	date	optional	The effective date of the document.
ExpirationDate	element	date	optional	The expiration date of the document.
PlaceOfIssue	element	string	optional	The place of issue.
CountryOfIssue	element	string	optional	The country of issue.

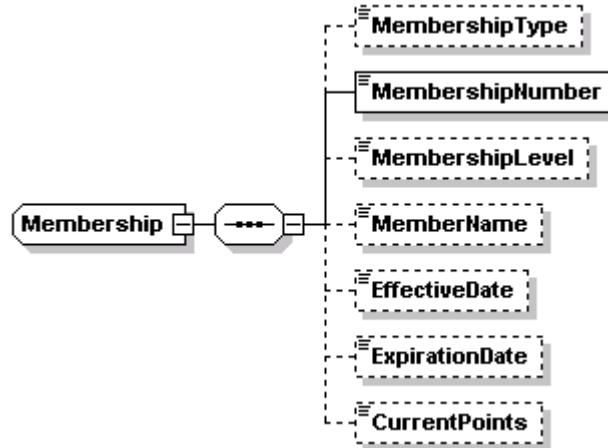

### 31.3.2.6 GovernmentIDList

```
<xs:complexType name="GovernmentIDList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="GovernmentID"
      xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:GovernmentID" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
GovernmentID	element	GovernmentID	optional/ multiple	A collection of government ID records.

### 31.3.2.7 Membership

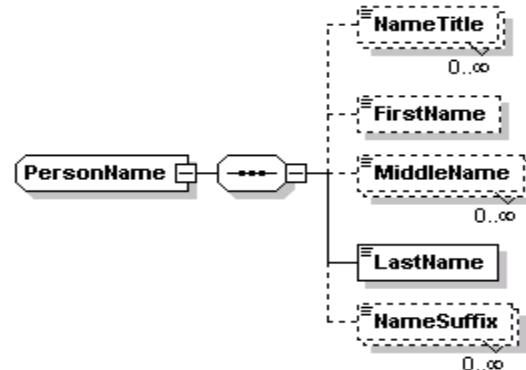

```

<xs:complexType name="Membership">
  <xs:sequence>
    <xs:element minOccurs="0" name="MembershipType" type="xs:string" />
    <xs:element name="MembershipNumber" type="xs:string" />
    <xs:element minOccurs="0" name="MembershipLevel" type="xs:string" />
    <xs:element minOccurs="0" name="MemberName" type="xs:string" />
    <xs:element minOccurs="0" name="EffectiveDate" type="xs:date" />
    <xs:element minOccurs="0" name="ExpirationDate" type="xs:date" />
    <xs:element minOccurs="0" name="CurrentPoints" type="xs:long" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
MembershipType	element	string	optional	Membership type.
MembershipNumber	element	string	required	Membership number.
MembershipLevel	element	string	optional	Membership level (e.g., GOLD, PLATINUM).
MemberName	element	string	optional	Member name.
EffectiveDate	element	date	optional	Membership effective date (or start date).
ExpirationDate	element	date	optional	Membership expiration date.
CurrentPoints	element	long	optional	Membership point accumulated.

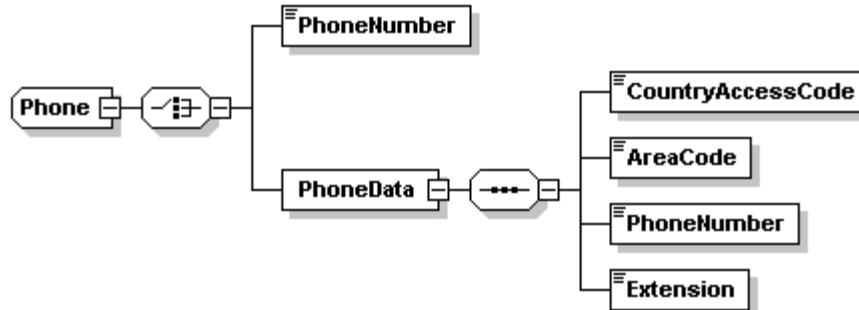

### 31.3.2.8 PersonName

```
<xs:complexType name="PersonName">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NameTitle" type="xs:string" />
    <xs:element minOccurs="0" name="FirstName" type="xs:string" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="MiddleName" type="xs:string" />
    <xs:element name="LastName" type="xs:string" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NameSuffix" type="xs:string" />
  </xs:sequence>
  <xs:attribute name="nameOrdered" type="xs:string" />
  <xs:attribute name="familiarName" type="xs:string" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
nameOrdered	attribute	string	none	Not used.
familiarName	attribute	string	none	Familiar name.
NameTitle	element	string	optional/multiple	Name title (e.g., Mr., Mrs., Dr.)
FirstName	element	string	optional	First name.
MiddleName	element	string	optional/multiple	Middle name.
LastName	element	string	required	Last name.
NameSuffix	element	string	optional/multiple	Name suffix (e.g., Jr., III, Esq.)

### 31.3.2.9 Phone

```

<xs:complexType name="Phone">
  <xs:choice>
    <xs:element name="PhoneNumber" type="xs:string" />
    <xs:element name="PhoneData">
      <xs:complexType>
        <xs:sequence>
          <xs:element name="CountryAccessCode" type="xs:string" />
          <xs:element name="AreaCode" type="xs:string" />
          <xs:element name="PhoneNumber" type="xs:string" />
          <xs:element name="Extension" type="xs:string" />
        </xs:sequence>
      </xs:complexType>
    </xs:element>
  </xs:choice>
  <xs:attribute name="phoneType" type="xs:string" />
  <xs:attribute name="phoneRole" type="xs:string" />
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
phoneType	attribute	string	none	Type of phone record. Typical values are HOME or BUSINESS.
phoneRole	attribute	string	none	Phone role. Typical values are PHONE, EMAIL, FAX, WEBPAGE.
PhoneNumber	element	string	required	Phone number, email address, web address, or other value appropriate to the phone role attribute.
PhoneData	element	PhoneData	required	The phone number may be specified as either a string above, or as individual components as described in the element below

### 31.3.2.10 PhoneData

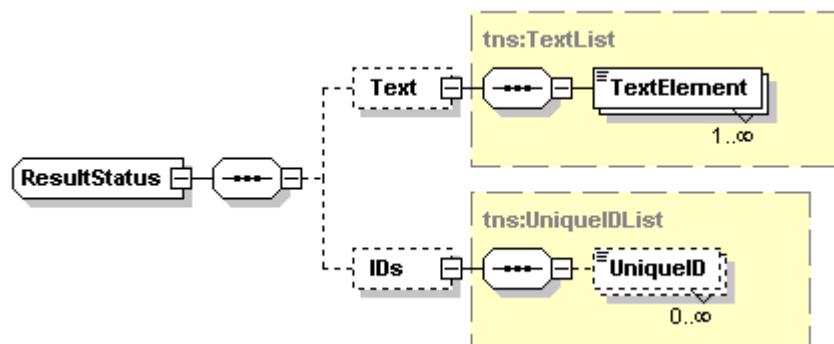

```

<xs:element name="PhoneData">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="CountryAccessCode" type="xs:string" />
      <xs:element name="AreaCode" type="xs:string" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

```
<xs:element name="PhoneNumber" type="xs:string" />
<xs:element name="Extension" type="xs:string" />
</xs:sequence>
</xs:complexType>
</xs:element>
```

Name	Type	Data Type	Use	Comments
CountryAccessCode	element	string	required	Country access code.
AreaCode	element	string	required	Area code.
PhoneNumber	element	string	required	Phone number.
PhoneData	element	Extension	required	Phone extension.

### 31.3.2.11 ResultStatus

```
<xs:complexType name="ResultStatus">
<xs:sequence>
<xs:element minOccurs="0" name="Text" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:TextList" />
<xs:element minOccurs="0" name="IDs" xmlns:q2="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q2:UniqueIDList" />
</xs:sequence>
<xs:attribute name="resultStatusFlag" xmlns:q3="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q3:ResultStatusFlag" />
<xs:attribute name="code" type="xs:string" use="optional" />
</xs:complexType>
```

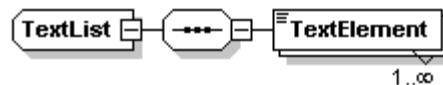

Name	Type	Data Type	Use	Comments
resultStatusFlag	attribute	ResultStatusFlag	none	
code	attribute	string	optional	
Text	element	TextList	optional	
IDs	element	UniqueIDList	optional	

### 31.3.2.12 Text

```
<xs:complexType name="Text">
  <xs:simpleContent>
    <xs:extension base="xs:string">
      <xs:attribute name="language" type="xs:language" use="optional" />
    </xs:extension>
  </xs:simpleContent>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Text	extension	string	optional	Text string.
Language	attribute	language	optional	Language code for Text value.

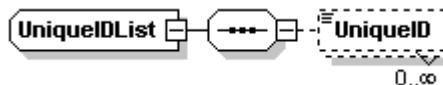

### 31.3.2.13 TextList

```
<xs:complexType name="TextList">
  <xs:sequence>
    <xs:element maxOccurs="unbounded" name="TextElement" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types"
      type="q1:Text" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
TextElement	element	Text	required/multiple	

### 31.3.2.14 UniqueIDList

```
<xs:complexType name="UniqueIDList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="UniqueID"
      xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:UniqueID" />
  </xs:sequence>
</xs:complexType>
```

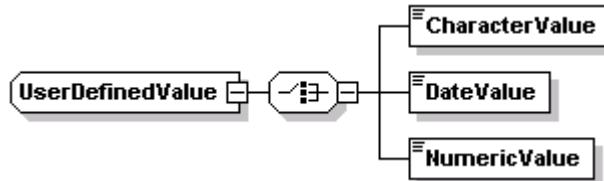

Name	Type	Data Type	Use	Comments
UniqueID	element	UniqueID	optional/multiple	A list of ID values (see below). Records are often identified by a pair of IDs where the source attribute identifies who each ID belongs to.

### 31.3.2.15 UniqueID

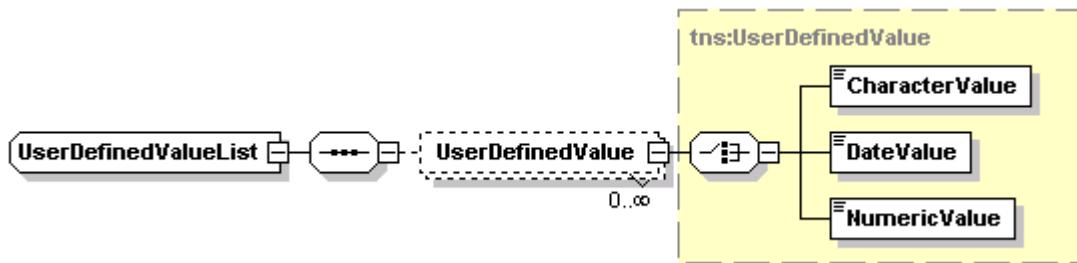

```
<xs:complexType name="UniqueID">
  <xs:simpleContent>
    <xs:extension base="xs:string">
      <xs:attribute name="source" type="xs:string" />
    </xs:extension>
  </xs:simpleContent>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
UniqueID	extension	string		The ID value
source	attribute	string	none	The source for the ID. This value identifies the creator/owner of the ID.

### 31.3.2.16 UserDefinedValue

### 31.3.2.17 UserDefinedValueList

### 31.3.2.18 Simple Types

RecordAdministratorAttributes	Attribute Group	insertUser	Internal user code representing the record creator.
		insertDate	Timestamp record was originally created.
		updateUser	Internal user code representing the user who last updated the record

		updateDate	Timestamp when the record was last updated.
		inactiveDate	Timestamp when the record was inactivated. When null, the record is considered active. When set, the record can be treated as though deleted.
BlackListFlag	Simple Type	REMOVE SET	Enumeration of blacklist values.
Gender	Simple Type	FEMALE MALE UNKNOWN	Enumeration for gender.
ReservationStatusType	Simple Type	CANCELLED CHECKED_IN CHECKED_OUT RESERVED WAITLISTED OTHER REVERSE_CHECKED_IN REVERSE_CHECKED_OUT	Enumeration for reservation statuses.
ResultStatusFlag	Simple Type	FAIL SUCCESS	Enumeration for status results.
SubscriptionAction	Simple Type	OTHER SUBSCRIBE UNSUBSCRIBE	Enumeration of subscription actions to perform.

### 31.3.3 Name Schema Elements (name.xsd)

Namespace	http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types
-----------	---

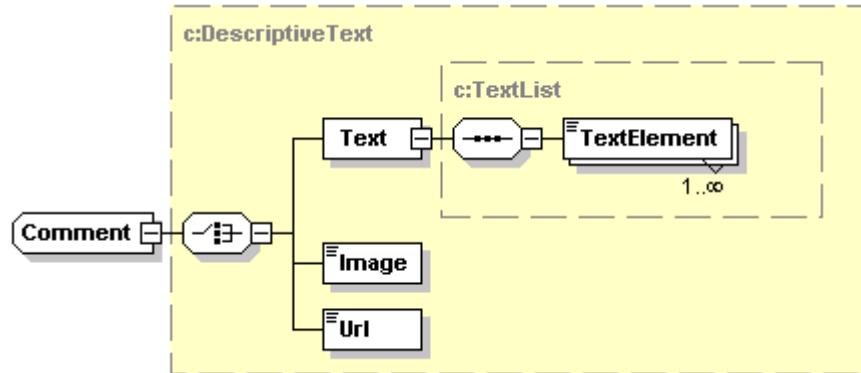

#### 31.3.3.1 BlackList

```
<xs:complexType name="BlackList">
  <xs:simpleContent>
    <xs:extension base="xs:string">
      <xs:attribute name="flag" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:BlackListFlag" />
    </xs:extension>
  </xs:simpleContent>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
BlackList	extension	string		Blacklist flag.
flag	attribute	BlackListFlag	none	One of REMOVE or SET indicating whether the blacklist flag should be

				set or not.
--	--	--	--	-------------

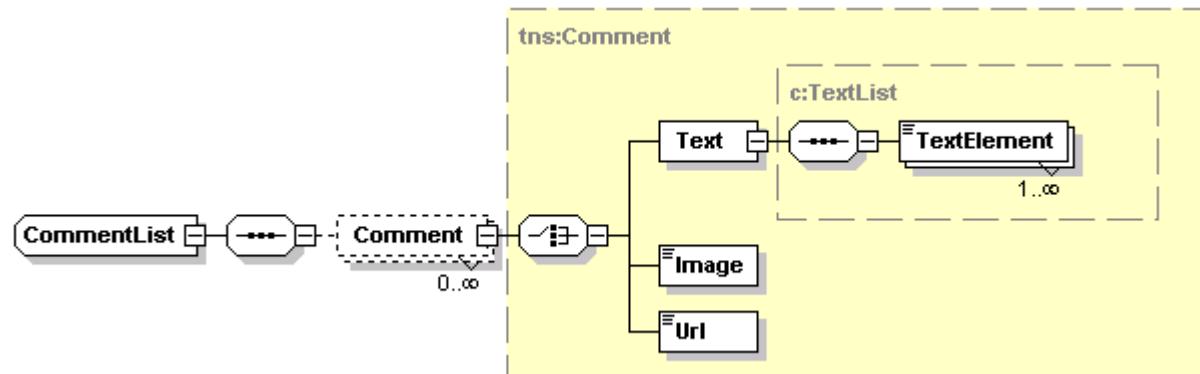

### 31.3.3.2 Comment

```
<xs:complexType name="Comment">
  <xs:complexContent mixed="false">
    <xs:extension xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" base="q1:DescriptiveText">
      <xs:attribute name="commentType" type="xs:string" />
      <xs:attributeGroup ref="q1:RecordAdministratorAttributes" />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Comment	extension	DescriptiveText		Extension of DescriptiveText
commentType	attribute	string	none	Type of comment.
RecordAdministratorAttributes	attr group			Record creation and last update attributes.

### 31.3.3.3 CommentList

```

<xs:complexType name="CommentList">
    <xs:sequence>
        <xs:element minOccurs="0" maxOccurs="unbounded" name="Comment" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types"
            type="q1:Comment" />
    </xs:sequence>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
Comment	element	Comment	optional/multiple	A collection of Comment elements.

### 31.3.3.4 Company

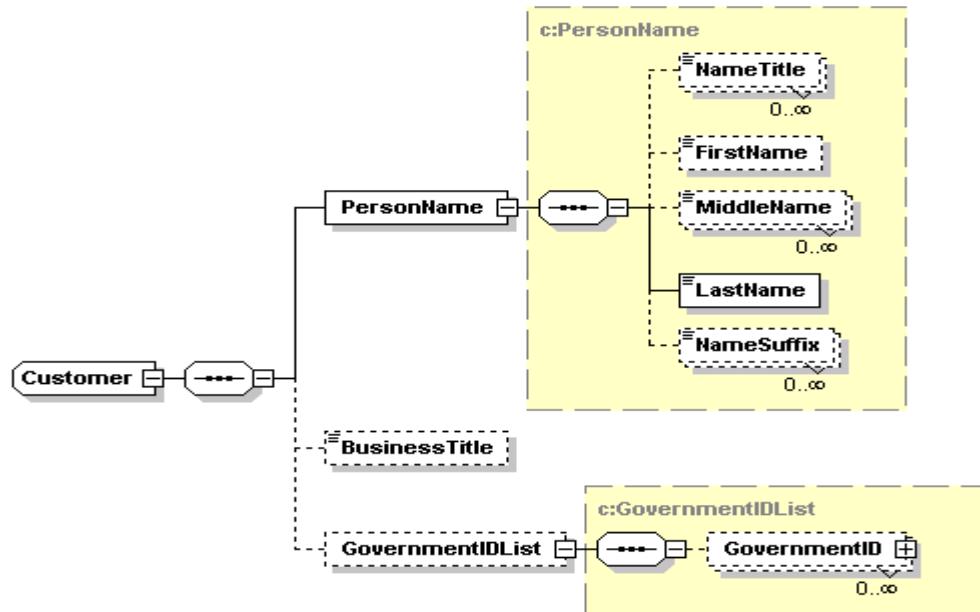

```

<xs:complexType name="Company">
    <xs:sequence>
        <xs:element name="CompanyName" type="xs:string" />
    </xs:sequence>
    <xs:attribute name="commissionCode" type="xs:string" />
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
commissionCode	attribute	string	none	Not used.
CompanyName	element	string	required	Company name.

### 31.3.3.5 Customer

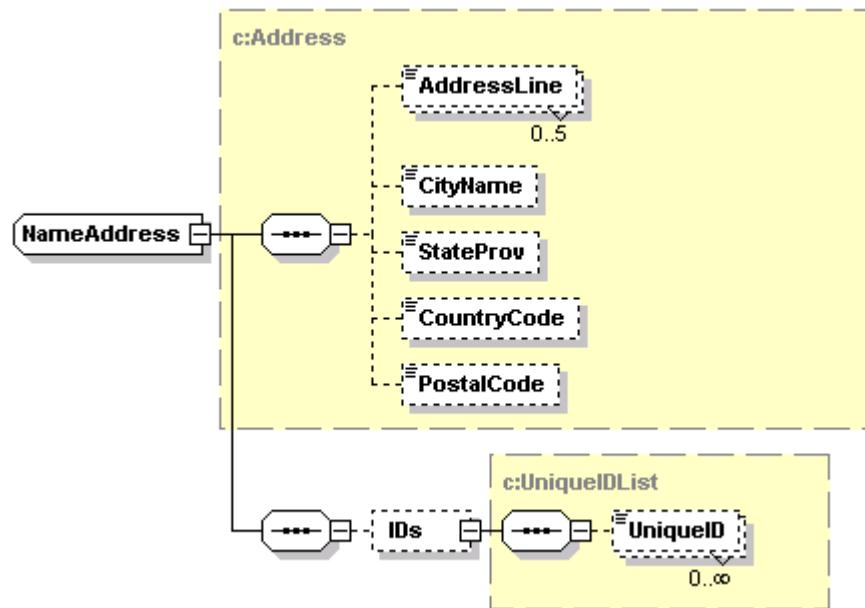

```

<xs:complexType name="Customer">
  <xs:sequence>
    <xs:element name="PersonName" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:PersonName" />
    <xs:element minOccurs="0" name="BusinessTitle" type="xs:string" />
    <xs:element minOccurs="0" name="GovernmentIDList" xmlns:q2="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types"
      type="q2:GovernmentIDList" />
  </xs:sequence>
  <xs:attribute name="gender" xmlns:q3="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q3:Gender" />
  <xs:attribute name="birthDate" type="xs:date" />
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
gender	attribute	Gender	none	The guest's gender.
birthDate	attribute	date	none	The guest's birth date.
PersonName	element	PersonName	required	The guest name record.
BusinessTitle	element	string	optional	The guest's title.
GovernmentIDList	element	GovernmentIDList	optional	A collection of government IDs.

### 31.3.3.6 NameAddress

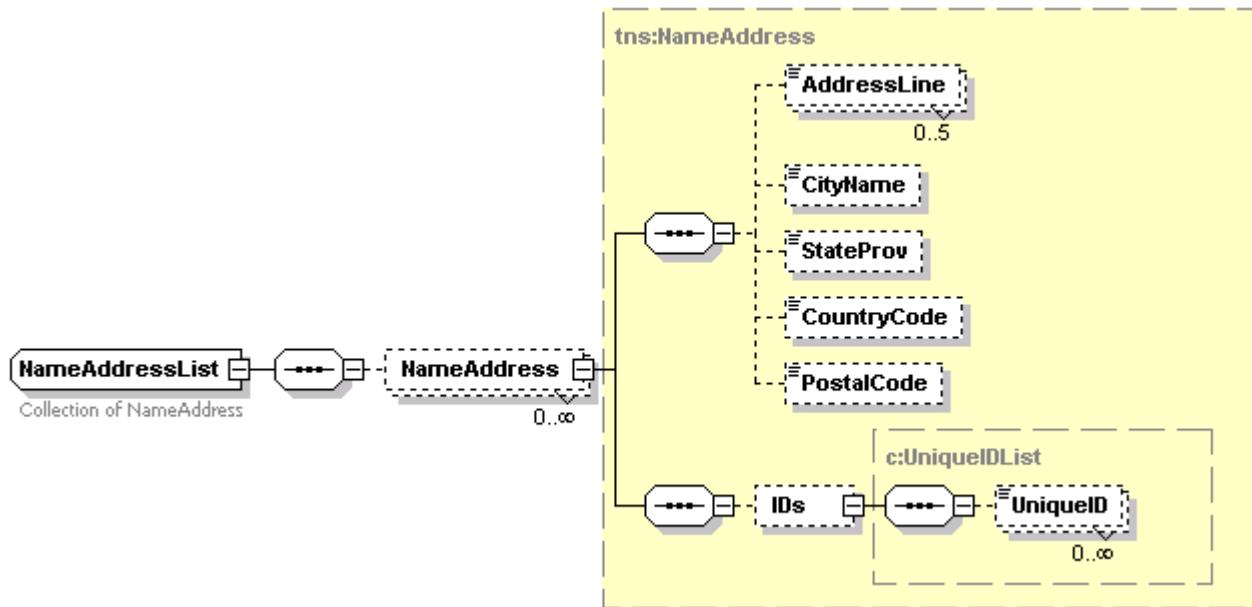

```

<xs:complexType name="NameAddress">
  <xs:complexContent mixed="false">
    <xs:extension xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" base="q1:Address">
      <xs:sequence>
        <xs:element minOccurs="0" name="IDs" type="q1:UniqueIDList" />
      </xs:sequence>
      <xs:attribute name="primary" type="xs:boolean" />
      <xs:attribute name="displaySequence" type="xs:int" />
      <xs:attributeGroup ref="q1:RecordAdministratorAttributes" />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
NameAddress	extension	Address		Extension of Address element type.
primary	attribute	boolean	none	Flag to indicate primary address.
displaySequence	attribute	int	none	Display sequence.
RecordAdministratorAttributes	attr group			Record creation and last update attributes.
IDs	element	UniqueIDList	optional	Internal ID values.

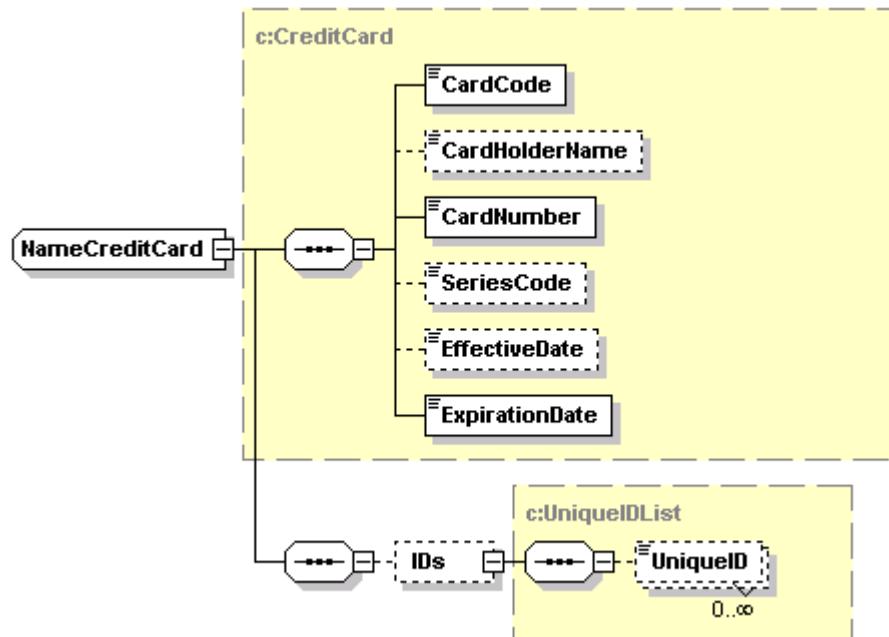

### 31.3.3.7 NameAddressList

```
<xs:complexType name="NameAddressList">
  <xs:annotation>
    <xs:documentation>Collection of NameAddress</xs:documentation>
  </xs:annotation>
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NameAddress"
      xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q1:NameAddress" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
NameAddress	element	NameAddress	optional/ multiple	A collection of NameAddress records.

### 31.3.3.8 NameCreditCard

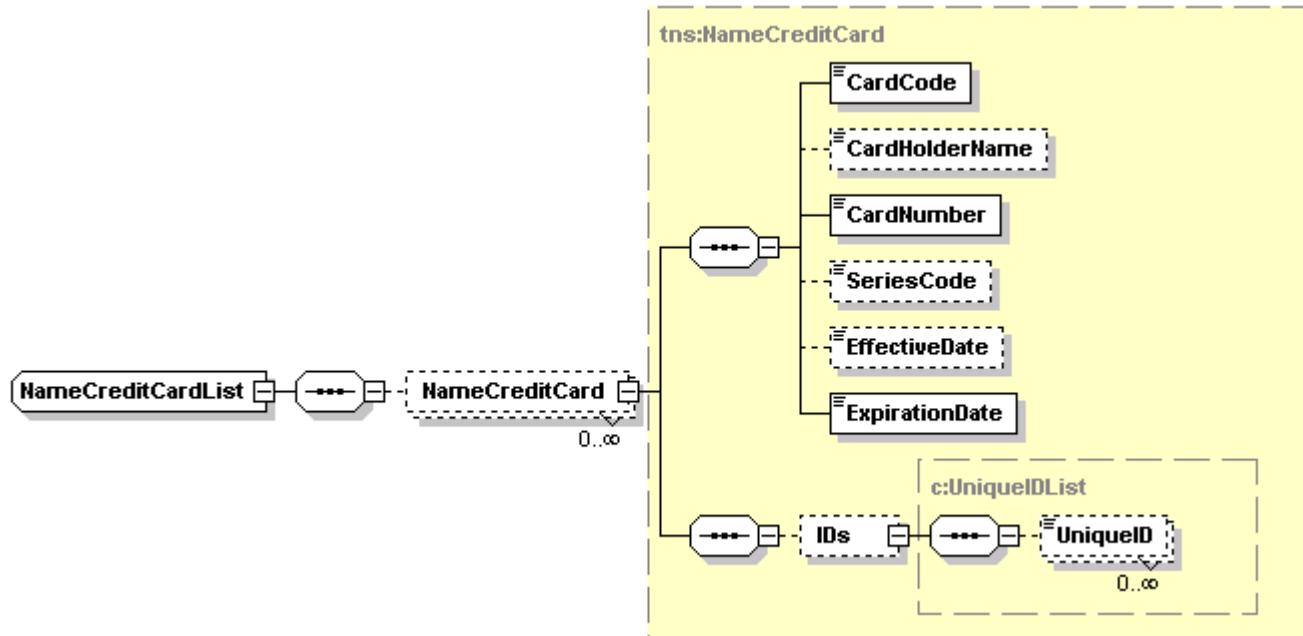

```

<xs:complexType name="NameCreditCard">
  <xs:complexContent mixed="false">
    <xs:extension xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" base="q1:CreditCard">
      <xs:sequence>
        <xs:element minOccurs="0" name="IDs" type="q1:UniqueIDList" />
      </xs:sequence>
      <xs:attribute name="primary" type="xs:boolean" />
      <xs:attribute name="displaySequence" type="xs:int" />
      <xs:attributeGroup ref="q1:RecordAdministratorAttributes" />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
NameCreditCard	extension	CreditCard		Extension of CreditCard element.
primary	attribute	boolean	none	Flag to indicate primary credit card.
displaySequence	attribute	int	none	Display order.
RecordAdministratorAttributes	attr group			Record creation and last update attributes.

IDs	element	UniqueIDList	optional	Internal IDs.
-----	---------	--------------	----------	---------------

### 31.3.3.9 NameCreditCardList

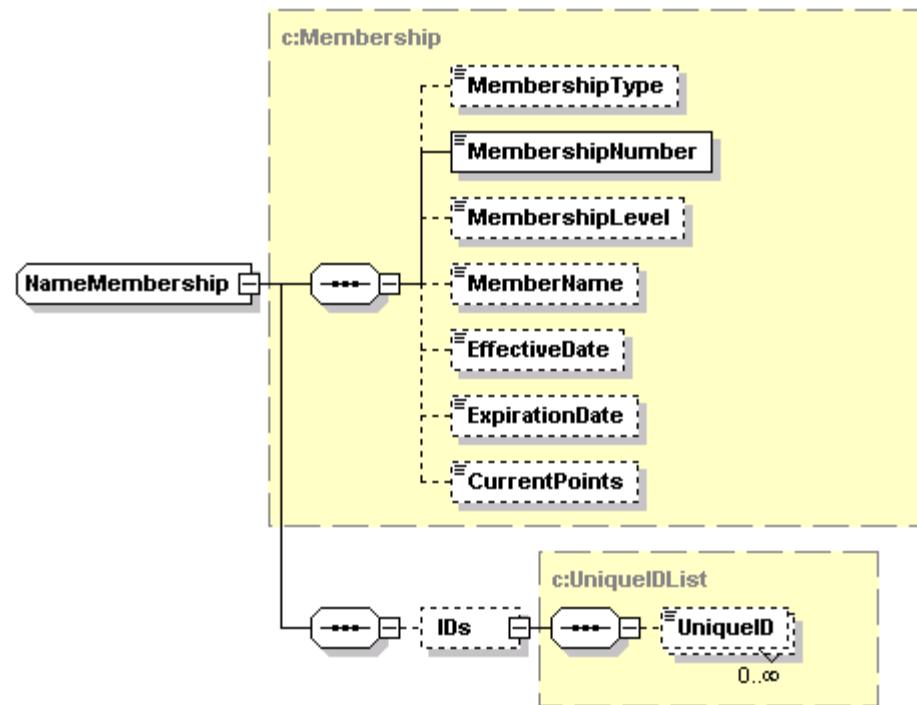

```

<xs:complexType name="NameCreditCardList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NameCreditCard"
      xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q1:NameCreditCard" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
NameCreditCard	element	NameCreditCard	optional/ multiple	A collection of credit card elements.

### 31.3.3.10 NameMembership

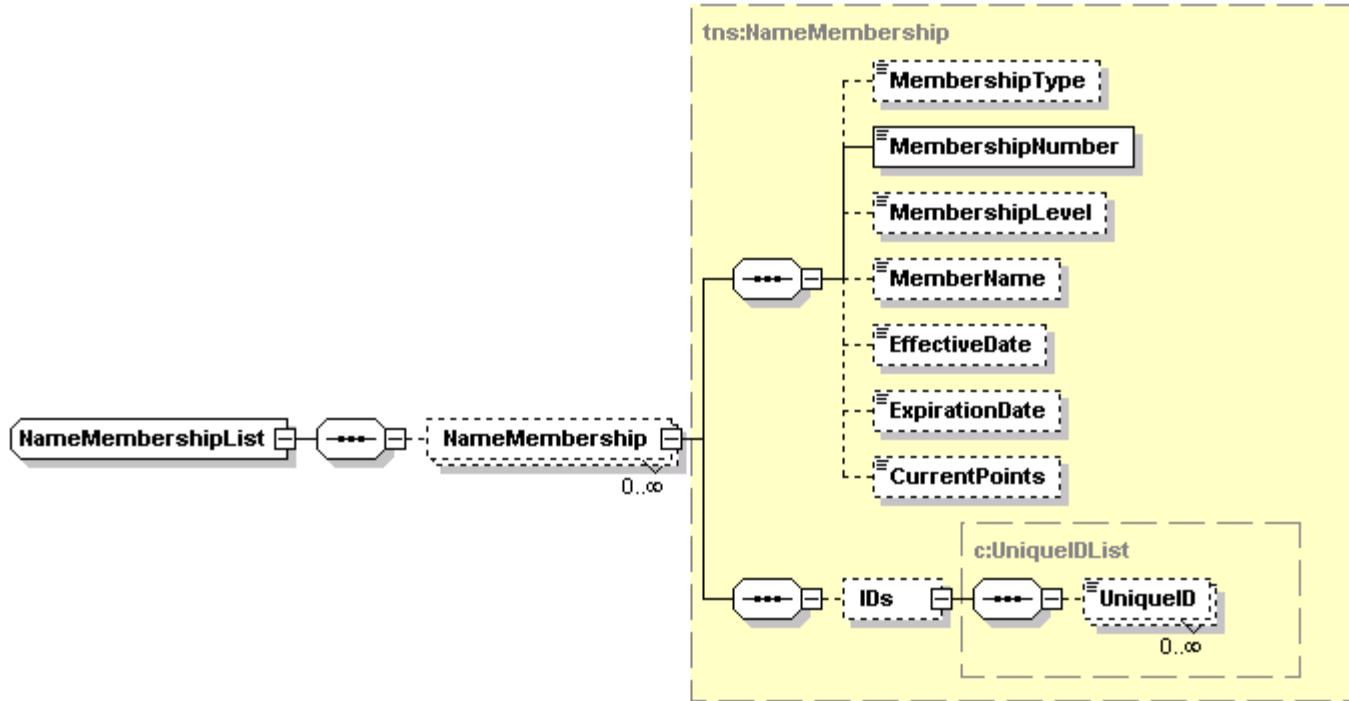

```

<xs:complexType name="NameMembership">
  <xs:complexContent mixed="false">
    <xs:extension xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" base="q1:Membership">
      <xs:sequence>
        <xs:element minOccurs="0" name="IDs" type="q1:UniqueIDList" />
      </xs:sequence>
      <xs:attribute name="primary" type="xs:boolean" />
      <xs:attribute name="displaySequence" type="xs:int" />
      <xs:attributeGroup ref="q1:RecordAdministratorAttributes" />
    </xs:extension>
  </xs:complexContent>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
NameMembership	extension	Membership		Extension of Membership element.
primary	attribute	boolean	none	Flag to indicate primary membership.
displaySequence	attribute	int	none	Display sequence.

RecordAdministratorAttributes	attr group			Record creation and last update attributes.
IDs	element	UniqueIDList	optional	Internal record IDs.

### 31.3.3.11 NameMembershipList

```

<xs:complexType name="NameMembershipList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NameMembership"
      xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q1:NameMembership" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
NameMembership	element	NameMembership	optional/ multiple	A collection of NameMembership elements.

### 31.3.3.12 NamePhone

```

<xs:complexType name="NamePhone">
  <xs:complexContent mixed="false">
    <xs:extension xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" base="q1:Phone">
  
```

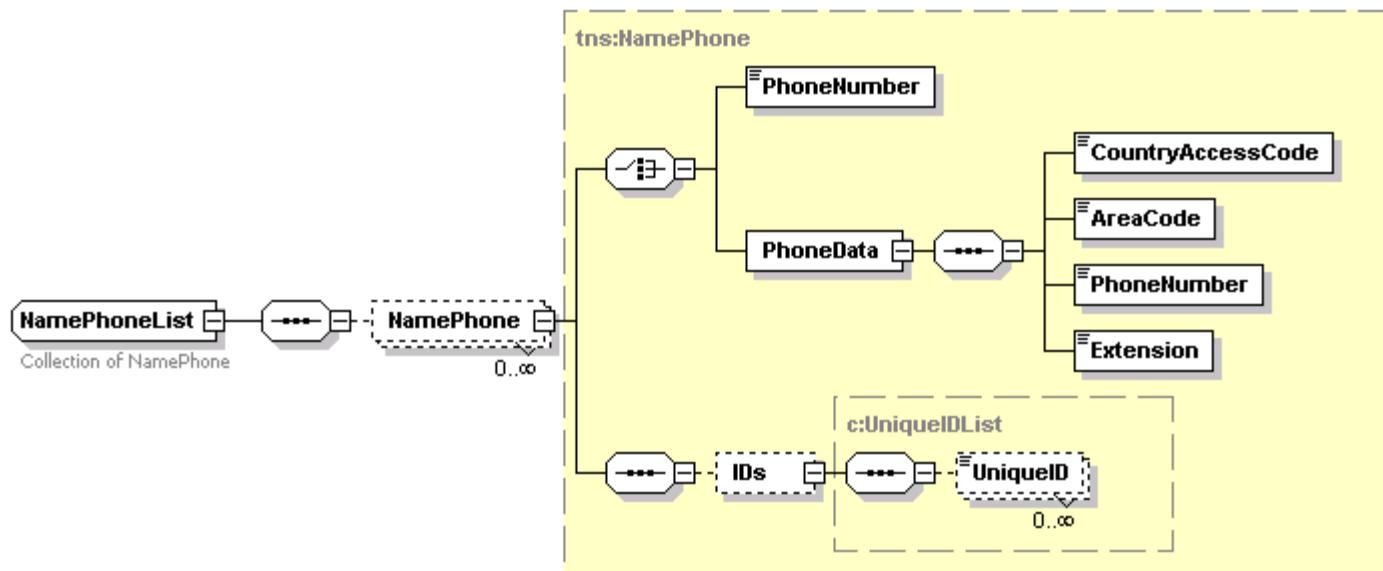

```

<xs:sequence>
  <xs:element minOccurs="0" name="IDs" type="q1:UniqueIDList" />
</xs:sequence>
<xs:attribute name="primary" type="xs:boolean" />
<xs:attribute name="displaySequence" type="xs:int" />
<xs:attributeGroup ref="q1:RecordAdministratorAttributes" />
</xs:extension>
</xs:complexContent>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
NamePhone	extension	Phone		Extension of Phone element type.
primary	attribute	boolean	none	Flag to indicate primary phone.
displaySequence	attribute	int	none	Display sequence.
RecordAdministratorAttributes	attr group			Record creation and update attributes.
IDs	element	UniqueIDList	optional	Internal record IDs.

### 31.3.3.13 NamePhoneList

```

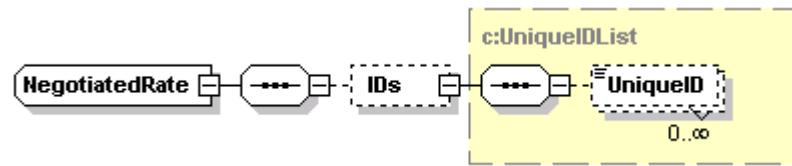

<xs:complexType name="NamePhoneList">
  <xs:annotation>
    <xs:documentation>Collection of NamePhone</xs:documentation>
  </xs:annotation>
  <xs:sequence>

```

```
<xs:element minOccurs="0" maxOccurs="unbounded" name="NamePhone" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types"
  type="q1:NamePhone" />
</xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
NamePhone	element	NamePhone	optional/multiple	A collection of NamePhone records.

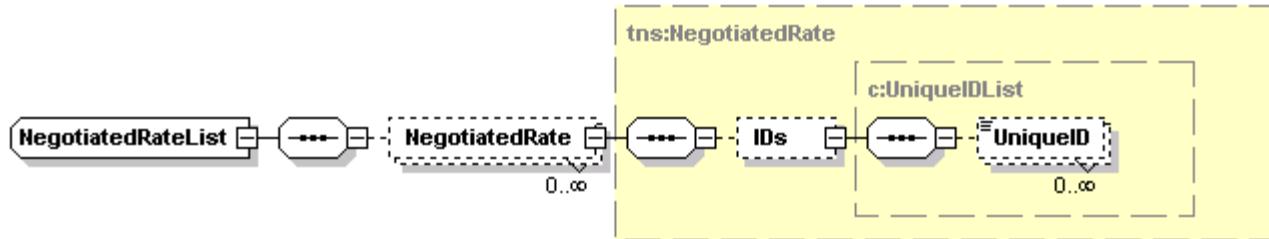

### 31.3.3.14 NegotiatedRate

```
<xs:complexType name="NegotiatedRate">
  <xs:sequence>
    <xs:element minOccurs="0" name="IDs" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:UniqueIDList" />
  </xs:sequence>
  <xs:attribute name="resortCode" type="xs:string" />
  <xs:attribute name="rateCode" type="xs:string" use="required" />
  <xs:attribute name="commissionCode" type="xs:string" />
  <xs:attribute name="beginDate" type="xs:date" />
  <xs:attribute name="endDate" type="xs:date" />
  <xs:attribute name="displaySequence" type="xs:int" />
  <xs:attributeGroup xmlns:q2="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" ref="q2:RecordAdministratorAttributes" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
resortCode	attribute	string	none	Property code where negotiated rate is applicable.
rateCode	attribute	string	required	Rate code.
commissionCode	attribute	string	none	Commission code.
beginDate	attribute	date	none	Begin date for rate.
endDate	attribute	date	none	End date for rate.
displaySequence	attribute	int	none	Display sequence.
RecordAdministratorAttributes	attr group			Record creation and last update attributes.
IDs	element	UniqueIDList	optional	Internal record IDs.

### 31.3.3.15 NegotiatedRateList

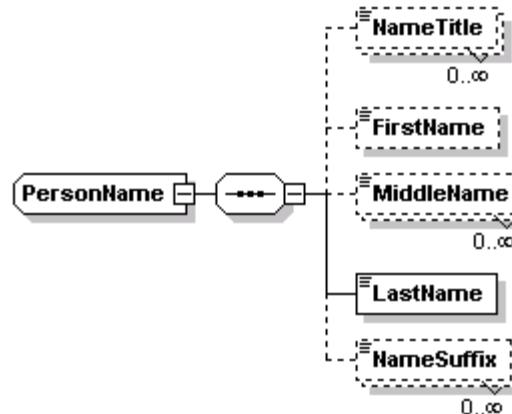

```

<xs:complexType name="NegotiatedRateList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NegotiatedRate"
      xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q1:NegotiatedRate" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
NegotiatedRate	element	NegotiatedRate	optional/multiple	A collection of NegotiatedRate elements.

### 31.3.3.16 PersonName

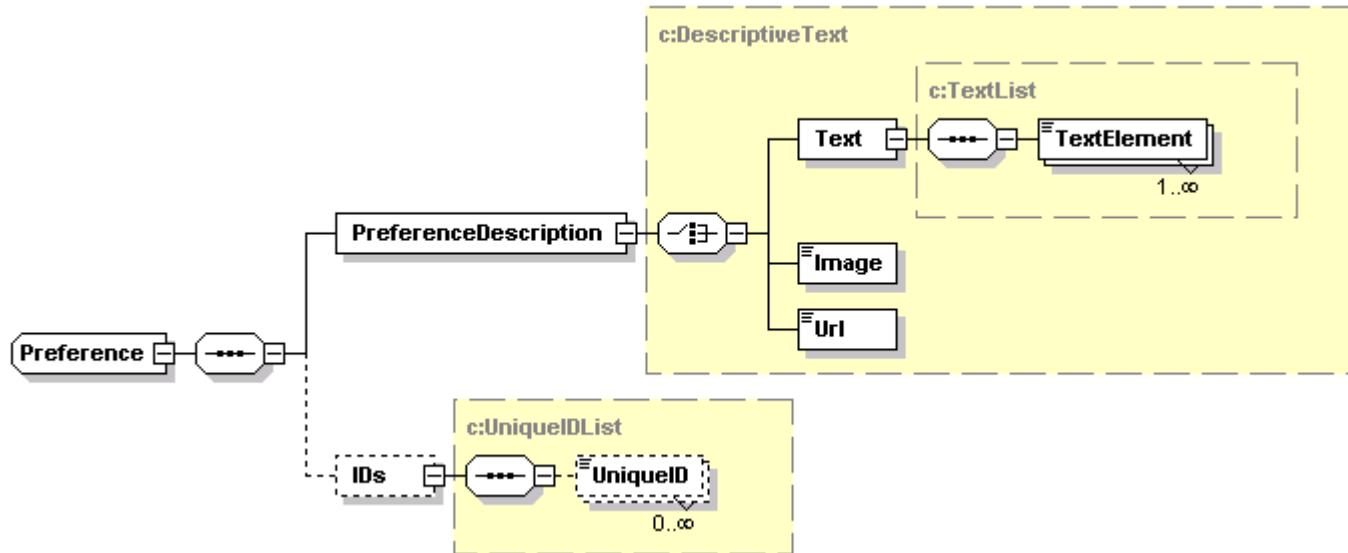

```

<xs:complexType name="PersonName">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NameTitle" type="xs:string" />
    <xs:element minOccurs="0" name="FirstName" type="xs:string" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="MiddleName" type="xs:string" />
    <xs:element name="LastName" type="xs:string" />
    <xs:element minOccurs="0" maxOccurs="unbounded" name="NameSuffix" type="xs:string" />
  </xs:sequence>
</xs:complexType>
  
```

```
</xs:sequence>
<xs:attribute name="nameOrdered" type="xs:string" />
<xs:attribute name="familiarName" type="xs:string" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
nameOrdered	attribute	string	none	The ordered representation of the guest name.
familiarName	attribute	string	none	The guest's familiar name.
NameTitle	element	string	optional/multiple	Name title such as "Mr.", "Mrs.", or "Dr."
FirstName	element	string	optional	The guest's first name.
MiddleName	element	string	optional/multiple	The guest's middle name(s).
LastName	element	string	required	The guest's last name. This is the only field which is required.
NameSuffix	element	string	optional/multiple	Name suffix values such as "Jr.", "III", "Esq."

### 31.3.3.17 Preference

```
<xs:complexType name="Preference">
  <xs:sequence>
    <xs:element name="PreferenceDescription" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:DescriptiveText"
    />
```

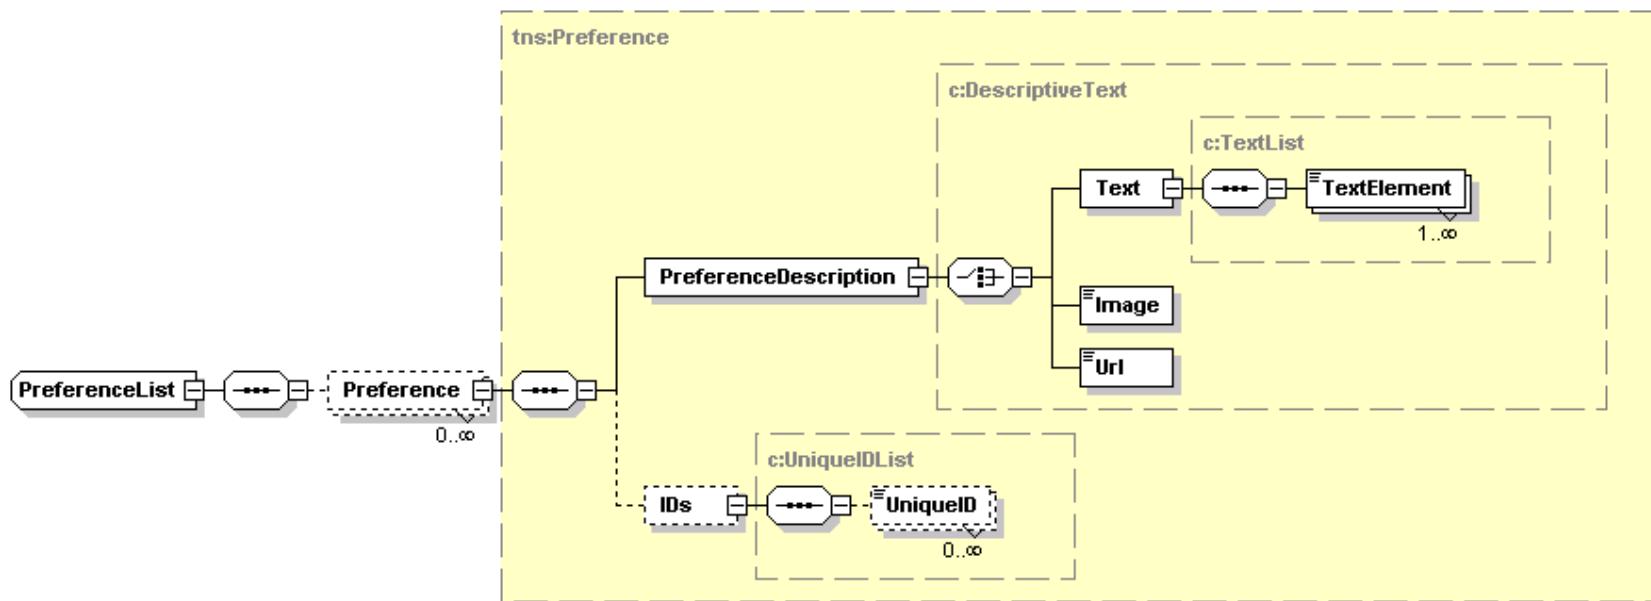

```

<xs:element minOccurs="0" name="IDs" xmlns:q2="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q2:UniqueIDList" />
</xs:sequence>
<xs:attribute name="resortCode" type="xs:string" />
<xs:attribute name="preferenceType" type="xs:string" />
<xs:attribute name="otherPreferenceType" type="xs:string" />
<xs:attribute name="preferenceValue" type="xs:string" />
<xs:attributeGroup xmlns:q3="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" ref="q3:RecordAdministratorAttributes" />
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
resortCode	attribute	string	none	Property code where preference is defined.
preferenceType	attribute	string	none	Preference type code.
otherPreferenceType	attribute	string	none	Not used.
preferenceValue	attribute	string	none	Preference value.
RecordAdministratorAttributes	attr group			Record creation and last update attributes.
PreferenceDescription	element	DescriptiveText	required	Description of the preference.
IDs	element	UniqueIDList	optional	Internal record IDs.

### 31.3.3.18 PreferenceList

```

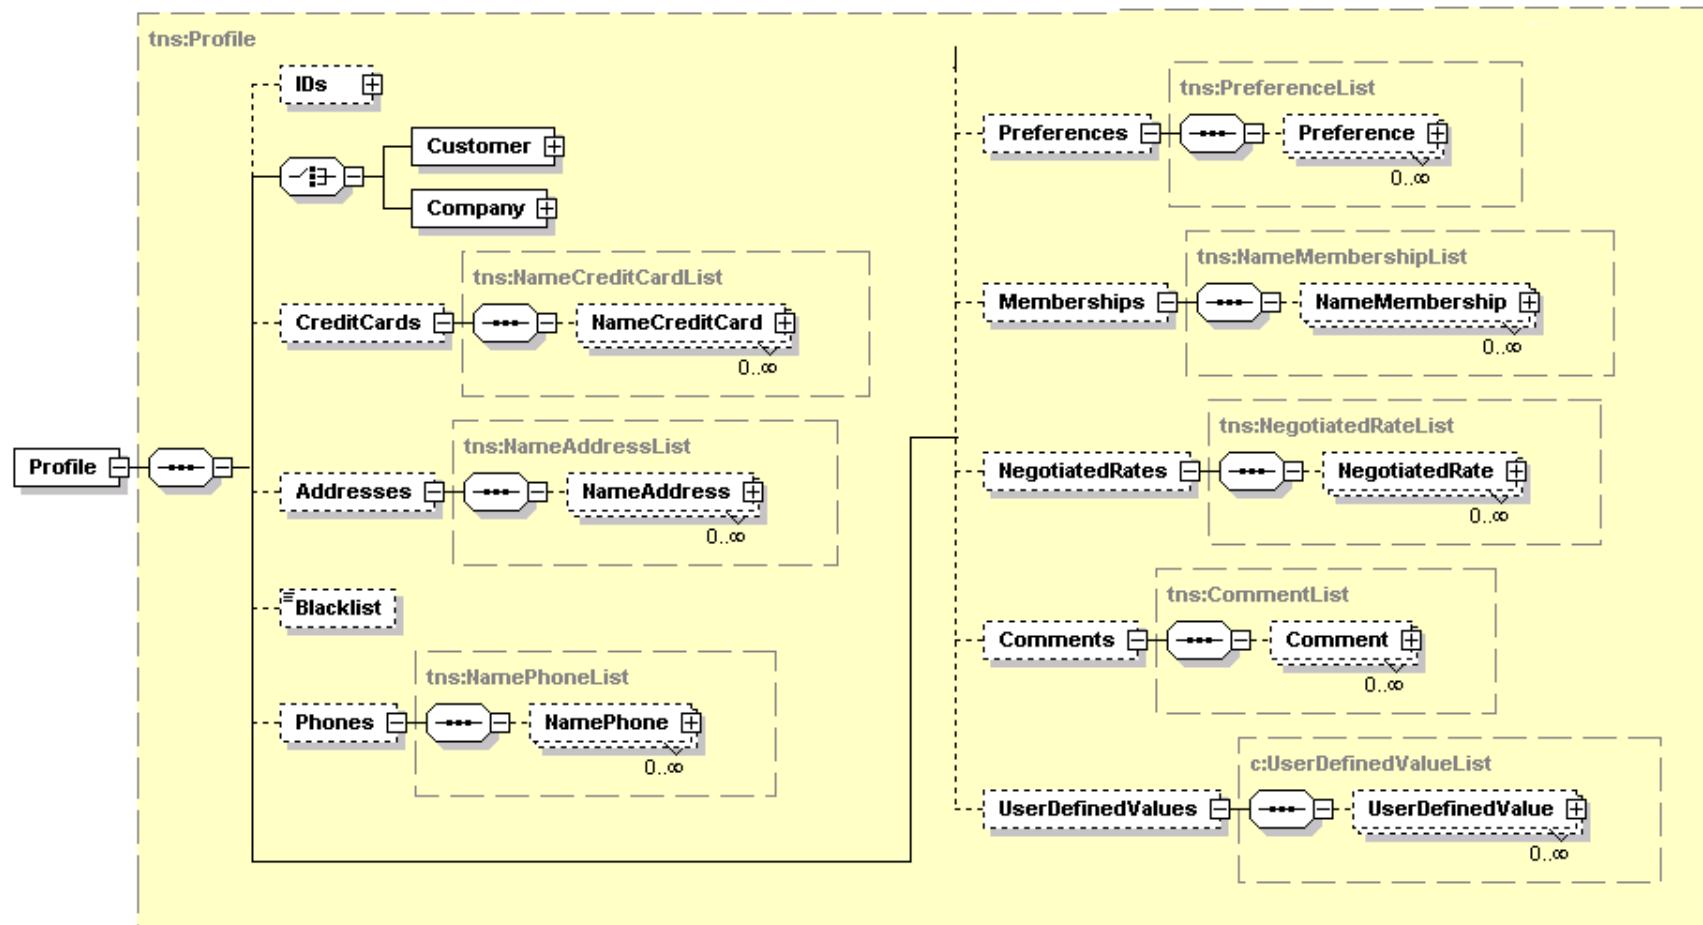

<xs:complexType name="PreferenceList">
  <xs:sequence>

```

```
<xs:element minOccurs="0" maxOccurs="unbounded" name="Preference" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types"
  type="q1:Preference" />
</xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Preference	element	Preference	optional/multiple	A collection of Preference elements.

### 31.3.3.19 Profile

```
<xs:complexType name="Profile">
```

```

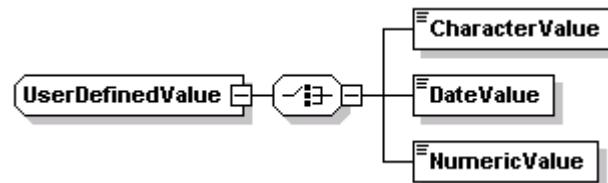

<xs:sequence>
  <xs:element minOccurs="0" name="IDs" xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:UniqueIDList" />
  <xs:choice>
    <xs:element name="Customer" xmlns:q2="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q2:Customer" />
    <xs:element name="Company" xmlns:q3="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q3:Company" />
  </xs:choice>
  <xs:element minOccurs="0" name="CreditCards" xmlns:q4="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q4:NameCreditCardList" />
  <xs:element minOccurs="0" name="Addresses" xmlns:q5="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q5:NameAddressList" />
  <xs:element minOccurs="0" name="Blacklist" xmlns:q6="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q6:BlackList" />
  <xs:element minOccurs="0" name="Phones" xmlns:q7="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q7:NamePhoneList" />
  <xs:element minOccurs="0" name="Preferences" xmlns:q8="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q8:PreferenceList" />
  <xs:element minOccurs="0" name="Memberships" xmlns:q9="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q9:NameMembershipList" />
  <xs:element minOccurs="0" name="NegotiatedRates" xmlns:q10="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q10:NegotiatedRateList" />
  <xs:element minOccurs="0" name="Comments" xmlns:q11="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Name/Types" type="q11:CommentList" />
  <xs:element minOccurs="0" name="UserDefinedValues" xmlns:q12="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q12:UserDefinedValueList" />
</xs:sequence>
<xs:attribute name="nameType" type="xs:string" />
<xs:attribute name="protected" type="xs:boolean" />
<xs:attribute name="languageCode" type="xs:string" />
<xs:attribute name="nationality" type="xs:string" />
<xs:attribute name="vipCode" type="xs:string" />
<xs:attribute name="taxExempt" type="xs:boolean" />
<xs:attributeGroup xmlns:q13="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" ref="q13:RecordAdministratorAttributes" />
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
nameType	attribute	string	none	Name type. Typical values are GUEST or COMPANY.
protected	attribute	boolean	none	Flag to indicated whether profile can be modified by external system.
languageCode	attribute	string	none	Default language code of guest.
nationality	attribute	string	none	Nationality of guest.
vipCode	attribute	string	none	VIP value.
taxExempt	attribute	boolean	none	Not used.
RecordAdministrator Attributes	attr group			Record of creation and last change.
IDs	element	UniqueIDList	optional	Internal profile ID.
Customer	element	Customer	required	The guest name. Either this element or the Company element must be defined. The minimum requirement is the guest's last name.

Company	element	Company	required	The company name. Either this element or the Customer element must be defined.
CreditCards	element	NameCreditCardList	optional	A collection of credit card elements.
Addresses	element	NameAddressList	optional	A collection of address records.
Blacklist	element	BlackList	optional	A flag to indicate whether the guest has been blacklisted.
Phones	element	NamePhoneList	optional	A collection of telephone elements.
Preferences	element	PreferenceList	optional	A collection of guest preference elements.
Memberships	element	NameMembershipList	optional	A collection of membership elements.
NegotiatedRates	element	NegotiatedRateList	optional	A collection of negotiated rate elements.
Comments	element	CommentList	optional	Comments.
UserDefinedValues	element	UserDefinedValueList	optional	A collection of customizable system defined values.

### 31.3.3.20 UserDefinedValue

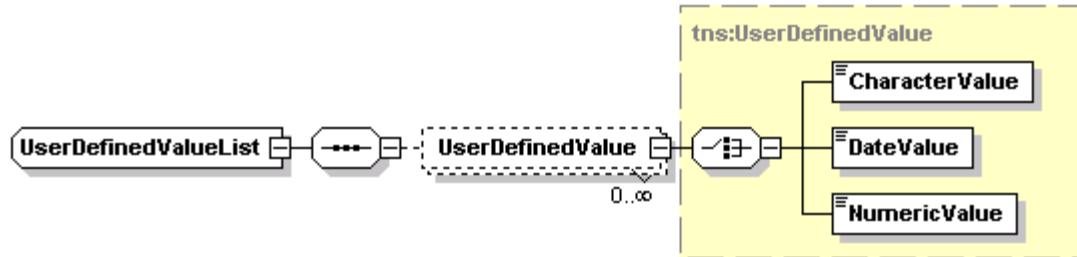

```

<xs:complexType name="UserDefinedValue">
  <xs:choice>
    <xs:element name="CharacterValue" type="xs:string" />
    <xs:element name="DateValue" type="xs:dateTime" />
    <xs:element name="NumericValue" type="xs:float" />
  </xs:choice>
  <xs:attribute name="valueName" type="xs:string" />
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
valueName	attribute	string	none	User defined value name.
CharacterValue	element	string	required	Character based value (Choice).
DateValue	element	dateTime	required	Date value (Choice).
NumericValue	element	float	required	Numeric value (Choice).

### 31.3.3.21 UserDefinedValueList

```
<xs:complexType name="UserDefinedValueList">
  <xs:sequence>
    <xs:element minOccurs="0" maxOccurs="unbounded" name="UserDefinedValue"
      xmlns:q1="http://htng.org/PWSWG/2006/08/SingleGuestItinerary/Common/Types" type="q1:UserDefinedValue" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
UserDefinedValue	element	UserDefinedValue	optional/ multiple	A collection of user defined values.

## *Part 6     **Guest Self Service, Version 1.0.1***

## Chapter 32 Document Information (Part 6)

### 32.1 Change History

Revision	Description	Date	Author
0.1	Initial submission	May 25, 2007	TAC GmbH
0.2	Added template types: Activity, Dining, Retail, GiftCertificate Unified and extended messages: TemplateCategory, TemplateInfo, Availability, Sale, FetchBooking	June 11, 2007	TAC GmbH
0.3	New message: PaymentCondition for prepayments and cancellations	June 18, 2007	TAC GmbH
0.4	Profile management by SGI spec Remove header of each example Minor changes (Attribute names, ..)	September 24, 2007	TAC GmbH
0.5	Add table to each message for details like Data Type, Use, Comments Add global schema elements. TemplateCategory: Rank -> Order TemplateInfo: One generic template with type attribute, Prices -> optional, Duration -> optional, MediaPath -> MediaURI, MediaFormat: MIME type PaymentCondition: New element Value with attribute type, instead of FixPrice and Percentage element unit Attribute for: CancellationWindow, Duration, StartInterval,MinimumInAdvance,MaximumInAdvance	October 24, 2007	TAC GmbH
0.6	New self service frontend roles	November 2, 2007	TAC GmbH
0.7	Use datatype duration instead of TimeUnitType TemplateInfo: Rename Links to RelatedItems and new relatedItemType added; Multiple taxes added PaymentCondition: DueDate added; two new payment condition types: FULLPAYMENT, BALANCEPAYMENT; Taxes added; Currency for payment condition value added Availability: Use of generic preferences with several types; availabilityType added; Complete profile instead of profileIDs.	November 12, 2007	TAC GmbH
0.8	Create request: Add PaymentGuarantee -> Credit card or reservation	November 19, 2007	TAC GmbH
0.9	Sale and Create: Use PaymentIdentification element for Create(PaymentGuarantee) and for Sale (PaymentInformation) Sale: Description text for ShippingCostItem element Sale response: ReceiptImage added BookingIdentification element: Remark added.	December 6, 2007	TAC GmbH

Revision	Description	Date	Author
0.91	TemplateInfo: New template type SHIPPINGCOSTS. Sale: TemplateID to ShippingCostItem added. Availability/Create: Element ModifyBookingIDs added to modify existing bookings. Changes to FetchBookingRequest/Response (Additional filter, Preferences, PreferredResources, etc.)	December 11, 2007	TAC GmbH
0.92	TemplateInfo: Element Note added for Instructions Availability element: Price -> optional for dining FetchBookingResponse: Optional element Remark added GiftCertificateIdentification: VerificationCode added New message: FetchGiftCertificate	December 19, 2007	TAC GmbH
0.93	New URI: <a href="http://htng.org/PWS/2008A/GuestSelfService">http://htng.org/PWS/2008A/GuestSelfService</a>	January 21, 2008	TAC GmbH
1.00	Added new optional attributes "preferenceType" and "preferred" to Resource	August 19, 2008	TAC GmbH
1.01	New URI: <a href="http://htng.org/PWS/2008B/GuestSelfService">http://htng.org/PWS/2008B/GuestSelfService</a>	August 26, 2008	TAC GmbH

## Chapter 33 Introduction

Global schema elements used in more than one message are included in the Global Schema Elements section of this document and marked with **green** color.

All data types, which are defined in the Single Guest Itinerary specification and used in this document, are marked with **blue** color and listed here:

- Profile
- PersonName
- Text
- Amount
- UniqueIDList
- ResultStatus
- OGTimeSpan
- PersonName
- NameMembership

Abbreviations in this document:

- CMS – Content managing system
- HSIA – High speed internet access
- KIOSK – Kiosk
- SSF – Self Service Frontend
- SSS – Services Scheduling System
- VOD – Video on demand
- WS – Web site

## Chapter 34 HTTP/SOAP

Communication between SSF and SSS takes place through HTTP requests and their responses.

The XML data structure corresponds to the structure used with permanent connection but with the data being enclosed in a SOAP envelope.

All messages must include a soap header that conforms to the WSAddressing and WSSecurity specifications. Receiving systems may optionally require that the wsa:To element match a specific destination address, and therefore, this element should be configurable at run time. In addition, all sending systems must identify themselves by specifying a wsa:From element unique for their system. Typically, this is in the form of "URN:<system>". The wsa:ReplyTo address may be the anonymous form described in the August, 2004 specification.

WSSecurity may be optionally implemented. Providers are only required to support basic plain text authentication with a username and password. The user credentials will be limited to a single login per system, agreed between two vendors. There is no requirement to support multiple user logins from a single vendor through this interface.

### Sample Header Message

```
<soap:Header>
  <wsa:Action>http://htng.org/PWS/2008B/GuestSelfService#TemplateCategory</wsa:Action>
  <wsa:MessageID>urn:uuid:11f46e88-8d20-6e65-3812-da0a786a90ef</wsa:MessageID>
  <wsa:ReplyTo>
    <wsa:Address>http://schemas.xmlsoap.org/ws/2004/08/addressing/role/anonymous</wsa:Address>
  </wsa:ReplyTo>
  <wsa:To>urn:TAC</wsa:To>
  <wsa:From>
    <wsa:Address>urn:ES</wsa:Address>
  </wsa:From>
  <wsse:Security soap:mustUnderstand="1">
    <wsu:Timestamp wsu:Id="Timestamp-97134fd8-7d8f-bc2c-14d0-9e8197fdc7e9">
      <wsu:Created>2007-05-14T07:51:15Z</wsu:Created>
      <wsu:Expires>2007-05-14T08:51:15Z</wsu:Expires>
    </wsu:Timestamp>
    <wsse:UsernameToken wsu:Id="SecurityToken-02115bec-7c32-1f79-c71c-0045929720ff">
      <wsse:Username>HTNG</wsse:Username>
      <wsse:Password Type="http://docs.oasis-open.org/wss/2004/01/oasis-200401-wss-username-token-profile-1.0#PasswordText">HTNG</wsse:Password>
      <wsse:Nonce>YymhHlFQrrxNkmid6cMrJQ==</wsse:Nonce>
      <wsse:Created>2007-05-14T07:51:15Z</wsse:Created>
    </wsse:UsernameToken>
  </wsse:Security>
</soap:Header>
```

All further examples are shown space saving, without SOAP envelope and without namespace declarations.

## Chapter 35 Profile Management

(SSS ⇔ SSF)

The guest self service interface uses the already defined profile management of the Single Guest Itinerary specification.

To avoid duplicate guest profiles, the UpdateProfile request can be used without ProfileIDs. When the ProfileIDs element is missing, the receiving system has to check by lastname, firstname, etc., if the guest already exists or not.

For further details, refer to Chapter 2.

## Chapter 36 Definition TemplateCategory

(SSF ⇔ SSS)

This request is used to retrieve template categories. The template categories can be used to group the templates in the SSF.

<b>Soap Action</b>	http://htng.org/PWS/2008B/GuestSelfService#TemplateCategory
--------------------	---

### Request

<b>TemplateCategoryRequest</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
TemplateCategoryIDs	element	UniqueIDList	optional	ID of the template category. If this tag is missing, then all template categories will be returned.

### Response

<b>TemplateCategoryResponse</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Result	element	ResultStatus	required	Result.
TemplateCategories	element	TemplateCategoryList	optional	Collection of template categories.

<b>TemplateCategoryList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
TemplateCategory	element	TemplateCategory	optional/multiple	Template category.

<b>TemplateCategory</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
TemplateCategoryIDs	element	UniqueIDList	required	IDs of the template category
Name	element	Text	required/ multiple	Name of the template category.
Order	element	unsignedInt	optional	A low order is before a high order.

## Example

Request to get all template categories:

### [Request]

```
<TemplateCategoryRequest>
</TemplateCategoryRequest>
```

### [Response]

```
<TemplateCategoryResponse>
<Result resultStatusFlag="SUCCESS" />
<TemplateCategories>
    <TemplateCategory>
        <TemplateCategoryIDs>
            <UniqueId source="TAC">1</UniqueId>
        </TemplateCategoryIDs>
        <Name language="en">Massage</Name>
        <Name language="de">Massagen</Name>
        <Order>2</Order>
    </TemplateCategory>

## Chapter 37 Definition TemplateInfo

(SSF ⇔ SSS)

This request is used to retrieve one or more templates. If no filter is set, all templates will be requested. A template must have one of the following types:

- ACTIVITY
- DINING
- RETAIL
- GIFTCERTIFICATE
- SHIPPINGCOSTS

<b>Soap Action</b>	http://htng.org/PWS/2008B/GuestSelfService#TemplateInfo
--------------------	---

### Request

<b>TemplateInfoRequest</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
TemplateIDs	element	UniqueIDList	optional	IDs of the template.
Type	element	string	optional	Type of the template. (possible values: ACTIVITY, DINING, RETAIL, GIFTCERTIFICATE, SHIPPINGCOSTS)
ResortId	element	string	optional	Property code.

### Response

The response delivers all templates, which applies to the given filter criteria.

<b>TemplateInfoResponse</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Result	element	ResultStatus	required	Result.
Templates	element	TemplateList	optional	Collection of the found templates.

<b>TemplateList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>

Template	element	Template	optional/multiple	Template.
----------	---------	----------	-------------------	-----------

<b>Template</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
type	attribute	string	required	Type of the template. (possible values: ACTIVITY, DINING, RETAIL, GIFTCERTIFICATE, SHIPPINGCOSTS)
TemplateIDs	element	UniqueIDList	required	IDs of the template.
Name	element	Text	required/multiple	Name of the template.
TemplateCategories	element	TemplateCategoryList	required	List of template categories. At least one template category must be assigned.
ValidFrom	element	date	optional	Start of the validity period of the template
ValidUntil	element	date	optional	End of the validity period of the template
Description	element	Text	optional/multiple	Detailed description of the template
Note	element	Text	optional/multiple	Additional notes about the template. Can be used for e.g., instructions, etc.
Prices	element	PriceList	optional	Contains information about the possible prices.
RelatedItems	element	RelatedItemList	optional	The related items can be used to promote templates or template categories, which are in relation with this template.
Media	element	Media	optional	Media of the template. For example: image, pdf, etc.
<b>Extended Elements for Activities</b>				
<b>Location</b>	<b>Element</b>	<b>String</b>	<b>Optional</b>	<b>Location of the Template</b>
AlternativeLocations	element	AlternativeLocationList	optional	List of alternative locations, where this template is also available.
MinimumInAdvanceBookings	element	duration	optional	It is only possible to book this template before this offset, which is calculated from now to the starting point of the booking.
MaximumInAdvanceBookings	element	duration	optional	It is only possible to book this template after this offset, which is calculated from now to the starting point of the booking.

PaymentConditions	element	LinkedPaymentConditionList	optional	Payment conditions of the template. A template can have multiple payment conditions.
AvailableResources	element	ResourceList	optional	All available resources for the template are listed. These resources can be used in requests to define preferred resources.
StartTime	element	string	optional	The booking must be between the Start- and EndTime.
EndTime	element	string	optional	The booking must be between the Start- and EndTime.
StartInterval	element	duration	optional	For example: The StartTime = 08:00, EndTime = 10:00 and the StartInterval = 30 minutes: Possible starts for bookings in this case are: 08:00, 08:30, 09:00, 09:30, 10:00
ActivityType	element	string	optional	ActivityType of the template. (e.g.,Massage, Golf, ..)
Duration	element	duration	optional	Duration of the template.

#### Extended Elements for Dining

Location	Element	String	Optional	Location of the Template
AlternativeLocations	element	AlternativeLocationList	optional	List of alternative locations, where this template is also available.
MinimumInAdvanceBookings	element	duration	optional	It is only possible to book this template before this offset, which is calculated from now to the starting point of the booking.
MaximumInAdvanceBookings	element	duration	optional	It is only possible to book this template after this offset, which is calculated from now to the starting point of the booking.
PaymentConditions	element	LinkedPaymentConditionList	optional	Payment conditions of the template. A template can have multiple payment conditions.
AvailableResources	element	ResourceList	optional	All available resources for the template are listed. These resources can be used in requests to define preferred resources.
StartTime	element	string	optional	The booking must be between the Start- and EndTime.
EndTime	element	string	optional	The booking must be between the Start- and EndTime.

StartInterval	element	duration	optional	For example: The Starttime = 08:00, EndTime = 10:00 and the StartInterval = 30 minutes: Possible starts for bookings in this case are: 08:00, 08:30, 09:00, 09:30, 10:00
<b>Extended Elements for GiftCertificate</b>				
Location	Element	String	Optional	Location of the Template
MinimumInAdvanceBookings	element	duration	optional	It is only possible to book this template before this offset, which is calculated from now to the starting point of the booking.
MaximumInAdvanceBookings	element	duration	optional	It is only possible to book this template after this offset, which is calculated from now to the starting point of the booking.
DateSelection	element	unsignedInt	optional	0 ... default; 1 ... when the gift certificate is selected a date must be selected (check contingents)
GiftCertificateType	element	string	optional	Type of gift certificate: HOTEL,SERVICE,VALUE,...
GiftCertificatePrintName	element	Text	optional/multiple	Additional name, which can be printed on the gift certificate.
GiftCertificatePrintText1	element	Text	optional/multiple	Additional text, which can be printed on the gift certificate.
GiftCertificatePrintText2	element	Text	optional/multiple	Additional text, which can be printed on the gift certificate.
GiftCertificatePrintText3	element	Text	optional/multiple	Additional text, which can be printed on the gift certificate.
<b>Extended Elements for Retail</b>				
Location	Element	String	Optional	Location of the Template
Weight	element	double	optional	Weight of the retail product, for calculating the shipping costs
Stock	element	Int	optional	Quantity of retail product, which are in stock.

AlternativeLocationList				
Name	Type	Data Type	Use	Comments
AlternativeLocation	element	string	optional/multiple	Name of the location.

<b>LinkedPaymentConditionList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
PaymentConditionIDs	element	UniqueIDList	optional/ multiple	IDs of the payment condition.

<b>PriceList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Price	element	Price	optional/ multiple	One possible price of the template.

<b>Price</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Name	element	Text	optional/ multiple	Name of the price.
Price	element	Amount	optional	Gross price of the template.
Taxes	element	TaxList	optional	Taxes of this price.
Description	element	Text	optional/ multiple	Detailed description for this price.

<b>RelatedItemList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
RelatedTemplateCategories	element	RelatedTemplateCategoryList	optional	Related template categories.
RelatedTemplates	element	RelatedTemplateList	optional	Related templates.

<b>RelatedTemplateCategoryList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
RelatedTemplateCategory	element	RelatedTemplateCategory	optional/ multiple	Template category with related item type.

<b>RelatedTemplateCategory</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
relatedItemType	attribute	string	optional	There are at least 3 possible types: UPSELL, CROSSSELL and ALTERNATE.
TemplateCategoryIDs	element	UniqueIDList	required	IDs of the template category.

<b>RelatedTemplateList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
RelatedTemplate	element	RelatedTemplate	optional/multiple	Template with related item type.

<b>RelatedTemplate</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
relatedItemType	attribute	string	optional	There are at least 3 possible types: UPSELL, CROSSSELL and ALTERNATE.
TemplateIDs	element	UniqueIDList	required	IDs of the template.

<b>TemplateCategoryList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
TemplateCategoryIDs	element	UniqueIDList	optional/multiple	List of template category IDs.

## Chapter 38 Definition PaymentCondition

(SSF ⇔ SSS)

This request is used to retrieve one or more payment conditions. The following filter can be set to request payment conditions:

<b>Soap Action</b>	http://htng.org/PWS/2008B/GuestSelfService#PaymentCondition
--------------------	---

### Request

<b>PaymentConditionRequest</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
PaymentConditionIDs	element	UniqueIDList	optional	IDs of the payment condition.
ResortId	element	string	optional	Property code.

### Response

The PaymentConditionResponse delivers a collection of payment conditions.

<b>PaymentConditionResponse</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Result	element	ResultStatus	required	Lookup result. If successful, the responding system is only required to set the resultStatusFlag as SUCCESS, and return the data in the PaymentConditionList.
PaymentConditions	element	PaymentConditionList	optional	Collection of payment conditions.

<b>PaymentConditionList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
PaymentCondition	element	PaymentCondition	optional/ multiple	Payment condition.

<b>PaymentCondition</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
type	attribute	string	required	The attribute type is required and the following values are available: PREPAYMENT, FULLPAYMENT, BALANCEPAYMENT, CANCELLATION
PaymentConditionIDs	element	UniqueIDList	required	IDs of the payment condition.
Value	element	PaymentConditionValue	required	Value of the payment condition.
CancellationWindow	element	duration	optional	Time offset, which are only used in case of cancellations. If no offset is given, the cancellation condition applies every time.
DueDate	element	duration	optional	Due date of the payment.
Taxes	element	TaxList	optional	Taxes of the payment condition.
Description	element	Text	optional/multiple	Detailed description of the payment condition.
ResortId	element	string	required	Property code.

<b>PaymentConditionValue</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
type	attribute	string	required	Either PERCENTAGE or FIXPRICE.
Value	element	Amount	required	Value of the payment condition.

### Example

Request to get all payment conditions of property HOTELB

#### [Request]

```
<PaymentConditionRequest>
    <ResortId>HOTELB</ResortId>
</PaymentConditionRequest>
```

#### [Response]

```
<PaymentConditionResponse>
<Result resultStatusFlag="SUCCESS" />
<PaymentConditions>

        <PaymentConditionIDs>
            <UniqueID source="TAC">1</UniqueID>
        </PaymentConditionIDs>
        <Value type="PERCENTAGE">
```

```
<Value>10</Value>
</Value>
<Description language="en">10% prepayment</Description>
<Description language="de">10% Anzahlung</Description>
<ResortId>HOTELB</ResortId>
</PaymentCondition>
<PaymentCondition type="PREPAYMENT">
<PaymentConditionIDs>
<UniqueId source="TAC">2</UniqueId>
</PaymentConditionIDs>
<Value type="FIXPRICE">
<Value currencyCode="USD">15</Value>
</Value>
<Description language="en">15$ prepayment</Description>
<Description language="de">15$ Anzahlung</Description>
<ResortId>HOTELB</ResortId>
</PaymentCondition>
<PaymentCondition type="CANCELLATION">
<PaymentConditionIDs>
<UniqueId source="TAC">3</UniqueId>
</PaymentConditionIDs>
<Value type="PERCENTAGE">
<Value>50</Value>
</Value>
<CancellationWindow>POYOMODT48H</CancellationWindow>
<Description language="en">50% cancellation costs within two days</Description>
<Description language="de">50% Stornogebühr innerhalb von zwei Tagen</Description>
<ResortId>HOTELB</ResortId>
</PaymentCondition>
<PaymentCondition type="CANCELLATION">
<PaymentConditionIDs>
<UniqueId source="TAC">4</UniqueId>
</PaymentConditionIDs>
<Value type="PERCENTAGE">
<Value>100</Value>
</Value>
<CancellationWindow>POYOMODT24H</CancellationWindow>
<Description language="en">100% cancellation costs within one day</Description>
<Description language="de">100% Stornogebühr innerhalb von einem Tag</Description>
<ResortId>HOTELB</ResortId>
</PaymentCondition>
</PaymentConditions>
</PaymentConditionResponse>
```

## Chapter 39 Definition Availability

(SSF ⇔ SSS)

The selected availabilities will be finalized (created) by a Create request. An availability request is only necessary for activity and dining templates (not for retail and gift certificates).

Possible scenario (dependent on the implementation of the SSS):

Each returned availability can be reserved by a temporary booking in the SSS to reserve the inventory, therapists, etc. The remaining temporary bookings will be deleted automatically.

<b>Soap Action</b>	http://htng.org/PWS/2008B/GuestSelfService#Availability
--------------------	---

### Request

<b>AvailabilityRequest</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
availabilityType	attribute	string	optional	BESTPRICE or BESTTIME.
TemplateIDs	element	UniqueIDList	required	IDs of the template.
ModifyBookingIDs	element	UniqueIDList	optional	Used to modify an existing booking in the SSS. The SSS has to know the old booking ID to exclude them at the availability check.
Profile	element	Profile	required	Complete profile, because guest type, membership type, etc. could be affect the availability and the price.
NumberOfPersons	element	unsignedInt	optional	Number of persons. Default value = 1. This field is needed for the template type dining. (For example: Dinner for 10 persons)
TimeSpans	element	TimeSpanList	required	This element contains the possible time spans.
PreferredResources	element	ResourceList	optional	This resources will be preferred if there are possible results with them. The PreferredResources can contain many Resource entries.
Preferences	element	PreferenceElementList	optional	Preference list.
ResortId	element	string	required	Property code.

## Response

<b>AvailabilityResponse</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Result	element	ResultStatus	required	Availabilityresult. If successful, the responding system is only required to set the resultStatusFlag as SUCCESS, and return the data in the AvailabilityList.
Availabilities	element	AvailabilityList	optional	All found availabilities. The maximum quantity of returned availabilities should be configurable in the SSS.

<b>AvailabilityList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Availability	element	Availability	optional/multiple	Availability.

<b>Availability</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
availabilityType	attribute	string	optional	BESTPRICE or BESTTIME.
TemplateIDs	element	UniqueIDList	required	IDs of the template.
BookingIDs	element	UniqueIDList	required	IDs of the temporary booking. Must be used to create this booking if would be selected.
TimeSpan	element	OGTimeSpan	required	Time span of the booking.
Price	element	Amount	optional	Price of the booking.
Resources	element	ResourceList	optional	Resources of the booking.
ResortId	element	string	required	Property code.

## Example

### [Request]

```
<AvailabilityRequest availabilityType="BESTPRICE">
    <TemplateIDs>

    </Availability>
</Availabilities>
```

</AvailabilityResponse>

## Chapter 40 Definition Create

(SSF ⇔ SSS)

The Create request can contain many Booking elements and one PaymentGuarantee element.

This message is the confirmation for a booking which was returned by the Availability request. With this request, the availability of the availability request, will be finalized in the SSS using the following information:

<b>Soap Action</b>	http://htng.org/PWS/2008B/GuestSelfService#Create
--------------------	---

### Request

<b>CreateRequest</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Bookings	element	BookingIdentificationList	required	Collection of bookings.
ModifyBookingIDs	element	UniqueIDList	optional	Used to modify an existing booking in the SSS. The SSS has to know the old booking ID to delete them.
PaymentGuarantee	element	PaymentIdentification	optional	It should be configurable, if a payment guarantee is necessary to create a booking.

### Response

The CreateResponse contains all requested bookings with their creation result.

<b>CreateResponse</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Bookings	element	BookingResultList	required	Collection of booking results.

### Example

#### [Request]

```
<CreateRequest>
    <Bookings>
        <Booking>
            <BookingIDs>
                <UniqueID source="TAC">67888</UniqueID>
                <UniqueID source="ES">150</UniqueID>
            </BookingIDs>
            <ReferenceNumber>235667</ReferenceNumber>
        </Booking>
    </Bookings>
```

```
<PaymentGuarantee>
<CreditCard>
    <CardNumber>4444333322221111</CardNumber>
    <ExpireDate>1008</ExpireDate>
</CreditCard>
</PaymentGuarantee>
</CreateRequest>
```

**[Response]**

```
<CreateResponse>
<Bookings>
    <Booking>
        <Result resultStatusFlag="SUCCESS" />
        <BookingIDs>
            <UniqueID source="TAC">67888</UniqueID>
            <UniqueID source="ES">150</UniqueID>
        </BookingIDs>
    </Booking>
</Bookings>
</CreateResponse>
```

## Chapter 41 Definition Delete

(SSF ⇔ SSS)

This request deletes bookings which were created by the Create request.

<b>Soap Action</b>	http://htng.org/PWS/2008B/GuestSelfService#Delete			
--------------------	---	--	--	--

### Request

<b>DeleteRequest</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Bookings	element	BookingIdentificationList	required	Collection of bookings, which should be deleted.

### Response

<b>DeleteResponse</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Bookings	element	BookingResultList	required	Collection of bookings, with their result.

### Example

#### [Request]

```
<DeleteRequest>
    <Bookings>
        <Booking>
            <BookingIDs>
                <UniqueID source="TAC">67888</UniqueID>
                <UniqueID source="ES">150</UniqueID>
            </BookingIDs>
        </Booking>
    </Bookings>
</DeleteRequest>
```

#### [Response]

```
<DeleteResponse>
    <Bookings>
        <Booking>
            <BookingIDs>
                <UniqueID source="TAC">67888</UniqueID>
                <UniqueID source="ES">150</UniqueID>
            </BookingIDs>
            <Result resultStatusFlag="SUCCESS" />
        </Booking>
    </Bookings>
</DeleteResponse>
```

```
</Bookings>  
</DeleteResponse>
```

## Chapter 42 Definition Sale

(SSF ⇒ SSS)

The Sale request contains all necessary information for completion a sales process in the SSS.

<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/GuestSelfService#Sale">http://htng.org/PWS/2008B/GuestSelfService#Sale</a>
--------------------	---

### Request

A Sale request consists of the following parts:

- Profile
- Payments (arbitrary number of payments)
- Items (arbitrary number of Booking, Retail, GiftCertificate, and ShippingCosts elements)

The element Profile corresponds to the structure of a New/UpdateProfile from the guest synchronization.

<b>SaleRequest</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
ProfileIdentification	element	ProfileIdentification	required	Used to identify the profile.
Payments	element	PaymentList	required	Collection of payments.
Items	element	ItemList	required	Collection of items.
ResortId	element	string	required	Property code.

<b>ProfileIdentification</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Profile	element	Profile	optional/choice	Profile as defined in SGI specification. (Choice)
ProfileIDs	element	UniqueIDList	optional/choice	ProfileIDs. (Choice)

<b>PaymentList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Payment	element	Payment	required/multiple	The element Payment must be set for every used payment method in the selling process.

<b>Payment</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
method	attribute	string	required	Sets the payment method in the SSS.
Value	element	Amount	required	With this payment method paid value.
PaymentInformation	element	PaymentIdentification	optional	When the guest pays with a gift certificate, credit card or room the additional payment information must be set here.

<b>ItemList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Booking	element	BookingItem	optional/multiple	This booking has to be created by a prior Create message.
CreateBooking	element	CreateBookingItem	optional/multiple	This element has the same function like the single message CreateRequest. This element should be used to create and sell bookings in one step without a prior Create message.
GiftCertificate	element	GiftCertificateItem	optional/multiple	The created gift certificate numbers will be returned by the SaleResponse.
Item	element	Item	optional/multiple	Common sales item.
ShippingCosts	element	ShippingCostItem	optional/multiple	The ShippingCosts must be calculated by the weight of the ordered retail products.

<b>BookingItem</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
BookingIDs	element	UniqueIDList	required	IDs of the booking.
Type	element	string	optional	Full or partial sell of an existing booking or cancellation of an booking and book the cancellation costs (Type = CANCEL)  Possible values: PREPAYMENT, FULLPAYMENT, BALANCEPAYMENT, CANCELLATION  Default: FULLPAYMENT
Price	element	Amount	required	Price of the booking.

<b>CreateBookingItem</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
BookingIdentification	element	BookingIdentification	required	IDs of the booking.
ModifyBookingIDs	element	UniqueIDList	optional	Used to modify an existing booking in the SSS. The SSS has to know the old booking ID to delete them.

<b>GiftCertificateItem</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
TemplateIDs	element	UniqueIDList	required	IDs of the template.
Price	element	Amount	required	Amount of the gift certificate.
BuyerName	element	string	optional	Name of the buyer (donor).
DedicationText	element	string	optional	The content of this field should be changeable for the buyer of the gift certificate, because this text could be printed on the gift certificate as dedication for the recipient.
LanguageCode	element	string	required	Needed to choose the right text blocks for the gift certificate. Possible values: en,de,fr, etc.

<b>Item</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
TemplateIDs	element	UniqueIDList	required	IDs of the template.
Price	element	Amount	required	Price of the sales item. (e.g., retail product)

<b>ShippingCostItem</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Price	element	Amount	required	Price of the shipping costs.
Description	element	Text	optional	This text could be used to present the type of shipping(e.g., overnight express) on the bill.
TemplateID	element	UniqueID	optional	TemplateID of shipping cost template.

## Response

<b>SaleResponse</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Result	element	ResultStatus	required	Result.
InvoiceNumber	element	string	required	Number of the created invoice.
InvoiceDate	element	date	required	Date and time of the created invoice.
ReceiptImage	element	Media	optional	Receipt media.
GiftCertificates	element	GiftCertificateList	optional	This element is optional, because it is possible that the sale request contains no gift certificate item.

<b>GiftCertificateList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
GiftCertificate	element	GiftCertificateData	optional/ multiple	Collection of the created gift certificates.

<b>GiftCertificateData</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
GiftCertificateNumber	element	string	required	Number of the created gift certificate.
GiftCertificateData	element	Media	optional	Depending on the workflow, this element is needed. (e.g., to create the gift certificate layout print in the SSS and send the base64 coded image or pdf to the SSF).

## Chapter 43 Definition FetchBooking

(SSF ⇒ SSS)

With this request the SSF can retrieve detailed information for bookings (e.g., the trainer, room, .. of an activity, etc.).

<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/GuestSelfService#FetchBooking">http://htng.org/PWS/2008B/GuestSelfService#FetchBooking</a>
--------------------	---

### Request

One of the filter must be set.

<b>FetchBookingRequest</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
BookingIDs	element	<a href="#">UniqueIDList</a>	optional	To request one specific booking.
ReferenceNumber	element	string	optional	To request all bookings for a global reference number.
Type	element	string	optional	To request bookings with a specific template type.
TimeSpan	element	<a href="#">OGTimeSpan</a>	optional	To request all bookings between this time span.
ProfileIDs	element	<a href="#">UniqueIDList</a>	optional	To request all bookings for a profile.
PersonName	element	<a href="#">PersonName</a>	optional	To request bookings by guest name.
Membership	element	<a href="#">NameMembership</a>	optional	To request all bookings for a membership. (e.g., MembershipNumber)
EmailAddress	element	string	optional	To request bookings by email address.
Reservation	element	<a href="#">ReservationIdentification</a>	optional	To request all bookings by one hotel reservation.

### Response

The response can contain a lot of Activity and Dining elements.

<b>FetchBookingResponse</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Result	element	<a href="#">ResultStatus</a>	required	Result.
Bookings	element	BookingList	optional	Collection of the found bookings.

### BookingList

Name	Type	Data Type	Use	Comments
Booking	element	Booking	optional/ multiple	Collection of the found bookings.

<b>Booking</b>				
Name	Type	Data Type	Use	Comments
type	attribute	string	required	Type of booked template.
BookingIDs	element	UniqueIDList	required	BookingIDs of the booking. (SGI ActivityID)
ProfileIDs	element	UniqueIDList	required	ProfileIDs of the booking guest.
ActivityType	element	string	optional	Type of the booking. (SGI)
Location	element	string	optional	Location of the booking. (SGI)
Name	element	Text	required/ multiple	Name of booking. (SGI)
NumberOfPersons	element	unsignedInt	optional	Number of persons. (Only used for dining) (SGI)
TimeSpan	element	OGTimeSpan	required	Time span of the booking. (SGI)
Duration	element	OGTimeSpan	optional	The length of the booking. (SGI)
Description	element	Text	optional/ multiple	Detailed booking description. (SGI)
Note	element	Text	optional/ multiple	Additional notes about the booking. (SGI) Can be used for, e.g., instructions, etc.
Remark	element	string	optional	Remark of the booking. Can be stored to the booking by the Create request.
Price	element	Amount	required	Booking price. (SGI Amount)
Participants	element	ParticipantList	optional	List of booked participants. (SGI Participants)
Resources	element	ResourceList	optional	List of booked resources.
RequestedPreferences	element	PreferenceElementList	optional	Requested preferences of the availability request.
RequestedPreferredResources	element	ResourceList	optional	Requested preferred resources of the availability request.

<b>ParticipantList</b>				
Name	Type	Data Type	Use	Comments
Participant	element	PersonName	optional/	Name of the participants.

## Chapter 44 Definition FetchGiftCertificate

(SSF ⇔ SSS)

With this request the SSF can retrieve detailed information for a gift certificate (e.g., value, expiration date, etc.).

For example, in case of gift certificate payment the SSF can request the value of the gift certificate by this request.

<b>Soap Action</b>	http://htng.org/PWS/2008B/GuestSelfService#FetchGiftCertificate			
--------------------	---	--	--	--

### Request

<b>FetchGiftCertificateRequest</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
GiftCertificate	element	GiftCertificateIdentification	required	To request one specific gift certificate.

### Response

<b>FetchGiftCertificateResponse</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Result	element	ResultStatus	required	Result.
GiftCertificate	element	GiftCertificate	optional	Found gift certificate.

<b>GiftCertificate</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
GiftCertificateIdentification	element	GiftCertificateIdentification	required	Identification of the gift certificate.
GiftCertificateType	element	string	required	Type of gift certificate: HOTEL, SERVICE, VALUE, etc.
GiftCertificateStatus	element	string	optional	Status of gift certificate: PRINTED, PAID, REDEEMED, CANCELLED, etc.
TemplateIDs	element	UniqueIDList	optional	Ids of the corresponding template.
LanguageCode	element	string	optional	Language of the gift certificate.
TemplateName	element	string	optional	Name of the corresponding template in gift certificate language.
TemplateDescription	element	string	optional	Description of the corresponding template in gift certificate language.

GiftCertificatePrintName	element	string	optional	Additional name, which can be printed on the gift certificate.
GiftCertificatePrintText1	element	string	optional	Additional text, which can be printed on the gift certificate.
GiftCertificatePrintText2	element	string	optional	Additional text, which can be printed on the gift certificate.
GiftCertificatePrintText3	element	string	optional	Additional text, which can be printed on the gift certificate.
IssueDate	element	date	optional	Date of issue.
ValidFrom	element	date	optional	Valid from.
ValidUntil	element	date	optional	Valid until.
RedeemDate	element	date	optional	Redeem date.
PaidDate	element	date	optional	Paid date.
BuyerProfileIDs	element	UniqueIDList	optional	Buyer ProfileIDs.
BuyerName	element	string	optional	Buyer name (donor). This is no PersonName, because this text can be changed on creation by the customer.
DedicationText	element	string	optional	Dedication text.
Tax	element	Tax	optional	Tax of the gift certificate.
Value	element	Amount	optional	Gift certificate value.
ServiceTemplateIDs	element	UniqueIDList	optional	TemplateIDs of the corresponding service.
InvoiceNumber	element	string	optional	Number of the sale invoice.

### Example

#### [Request]

```
<FetchGiftCertificateRequest>
  <GiftCertificate>
    <GiftCertificateNumber>VV2300021/07</GiftCertificateNumber>

</FetchGiftCertificateResponse>
```

## Chapter 45 Global schema elements

Each schema element, which is used in more than one message, is defined in this section. The usages of this schema elements are marked with green color. The blue elements are defined in the Single Guest Itinerary specification.

TimeSpanList				
Name	Type	Data Type	Use	Comments
TimeSpan	element	OG TimeSpan	required/ multiple	One time span is required.

Media				
Name	Type	Data Type	Use	Comments
MediaID	element	UniqueIDList	optional	IDs of the media.
MediaFormat	element	string	optional	MIME type of the media. For example: image/jpeg, application/pdf, etc.
MediaURI	element	anyURI	optional	URI of the media file (e.g., \\192.168.22.70\data\itempictures\0\0\0\950.jpg) (Choice)
MediaData	element	base64Binary	optional	Base64 coded media data. (Choice)

ResourceList				
Name	Type	Data Type	Use	Comments
Resource	element	Resource	optional/ multiple	One of the possible resource.

Resource				
Name	Type	Data Type	Use	Comments
Resource	extension	string	required	Name of the resource.
category	attribute	string	optional	Name of the resource category.
preferenceType	attribute	string	optional	Type of preference; e.g., GENDER, SMOKING, MEALTYPE, TABLETYPE
preferred	attribute	string	optional	Requesting value: GENDER: MALE or FEMALE, SMOKING: SMOKER, or NONSMOKER, etc.

<b>BookingIdentificationList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Booking	element	BookingIdentification	required/ multiple	At least one booking is needed.

<b>BookingIdentification</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
BookingIDs	element	UniqueIDList	required	The internal BookingID, which was returned by a previous AvailabilityResponse must be filled.  The external BookingID can be assigned.
ReferenceNumber	element	string	optional	The reference number is a global number to identify a group of activities, hotel reservations, etc.
Remark	element	string	optional	This remark can be used to store a note to a booking.

<b>BookingResultList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Booking	element	BookingResult	required/ multiple	At least one booking result is required.

<b>BookingResult</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Result	element	ResultStatus	required	Result of the booking creation.
BookingIDs	element	UniqueIDList	required	IDs of the created bookings.

<b>TaxList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Tax	element	Tax	optional/ multiple	List of taxes.

<b>Tax</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
TaxName	element	Text	optional	Name of tax.
TaxRate	element	double	required	Tax rate. (e.g., 7)
TaxAmount	element	Amount	optional	Tax amount.

<b>PaymentIdentification</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
CreditCard	element	CreditCardIdentification	optional/choice	The CardNumber and ExpireDate are required in the element CreditCardIdentification.
Reservation	element	ReservationIdentification	optional/choice	Used to identify a hotel reservation.
GiftCertificate	element	GiftCertificateIdentification	optional/choice	Gift certificate payment information.

<b>GiftCertificateIdentification</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
GiftCertificateNumber	element	string	required	Unique gift certificate number.
ExpirationDate	element	date	optional	Expiration date of gift certificate.
VerificationCode	element	string	optional	Code which is printed on the gift certificate like the CVV2 code of a credit card.

<b>ReservationIdentification</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
ReservationID	element	UniqueID	optional	Reservation ID.
RoomNumber	element	string	optional	Room number.
ConfirmationNo	element	string	optional	Confirmation number.

<b>CreditCardIdentification</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
CardNumber	element	string	required	Complete credit card number without spaces.

ExpirationDate	element	string	required	Expiration date of the credit card without separator (e.g., October 2008 is formatted as 1008).
CVV2	element	string	optional	Code for verifying the card.
CardHolderName	element	string	optional	Name of the card holder.
CardHolderAddressLine	element	string	optional	Address line of the card holder.
CardHolderCityName	element	string	optional	City name of the card holder.
CardHolderStateProv	element	string	optional	State of the card holder.
CardHolderCountryCode	element	string	optional	Country of the card holder.
CardHolderPostalCode	element	string	optional	Postal code of the card holder.
RemoteIP	element	string	optional	IP of the remote system. Can be used for logging purpose.

<b>PreferenceElementList</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Preference	element	PreferenceElement	optional/ multiple	The Preferences can contain many Category entries which must be unique.

<b>PreferenceElement</b>				
<b>Name</b>	<b>Type</b>	<b>Data Type</b>	<b>Use</b>	<b>Comments</b>
Category	extension	string	required	Name of the resource category.
preferenceType	attribute	string	required	Type of preference; e.g.. GENDER, SMOKING, MEALTYPE, TABLETYPE
preferred	attribute	string	required	Requesting value: GENDER: MALE or FEMALE, SMOKING: SMOKER or NONSMOKER, etc.
mode	attribute	string	required	Mode of the request: PREFERRED or STRICT

## Chapter 46 Use-Cases

### 46.1 Make On-Line Spa Appointment – Select Treatment First

#### Actors

WS – Website

SSS – Service Scheduling System

- Mr. John Smith is browsing a website of "HTNG Hotels and Resorts".
- He then makes a reservation to a stay in HTNG Hotel New York", arriving on January 15<sup>th</sup> and Departing on January 20<sup>th</sup>, 2008.
- While browsing a website, Mr. Smith notices that there is a nice new spa "The Spa" at the hotel, and decides to make a Spa booking.
- First, he is browsing a list of treatments, to find what he likes.
- He determines that he would like to book a Hot Stone Massage treatment, at the price of 100.00.
- Based on his schedule, he would like to book it for Tuesday, January 15<sup>th</sup>, 2008, and is flexible with his time.
- He enters in the date, and then select afternoon time range, which is sometime between 5pm and 8pm.
- He also selects a preference for "female therapist".
- A list of available treatment times is displayed.
- Mr. Smith selects 6pm time slot.
- A message comes back advising him that for this treatment, special cancellation policy is in place, and he would have to cancel no less than 24 hours prior to arrival to avoid penalty.
- In case of late cancellation, a cancellation fee of 50% of treatment plus applicable charges will be applied.
- The guest is asked how they would like to guarantee their Spa booking. Options are: all major credit cards or bill to their room bill.
- Guest is selecting "room bill" option and clicks NEXT.
- Now, their profile information is displayed, which is previously already received from their hotel reservation:
  - Mr. John Smith
  - 123 Happy Lane
  - Chicago, IL, 60611, USA
  - Home Phone: +1 (312) 111-2222
  - Mobile Phone: +1 (312) 222-3333

- Email: [john.smith@htng.com](mailto:john.smith@htng.com)
- Guest verifies that this information is correct, and clicks "book it".
- The appointment is now made in the Spa System, and Guest receives back their Spa booking ID.
- A Single Guest Itinerary is now displayed:
  - Hotel Room Reservation:
    - HTNG Hotel New York
    - Arriving Tuesday, January 15<sup>th</sup>, 2008
    - Departing Sunday, January 20<sup>th</sup>, 2008
    - Room Type – Deluxe King
    - Hotel Confirmation number 787878
    - Cancellation policy – no later then 6pm day of arrival
  - Spa Reservation:
    - Location - "The Spa"
    - Treatment Date – Tuesday. January 15<sup>th</sup>, 2008
    - Treatment Time – 6pm – 7pm
    - Arrival Time 5:45pm
    - Treatment type – "Hot Stone Massage"
    - Price – 100.00 USD
    - Preference – Female Therapist
    - Spa Confirmation number – 454545

## 46.2 Make On-Line Spa Appointment – Select Timespan First

### Actors

WS – Website

SSS – Service Scheduling System

- Mr. John Smith is browsing a website of “HTNG Hotels and Resorts”.
- He then makes a reservation to a stay in HTNG Hotel New York”, arriving on January 15<sup>th</sup> and Departing on January 20<sup>th</sup>, 2008.
- While browsing a website, Mr. Smith notices that there is a nice new spa “The Spa” at the hotel, and decides to make a Spa booking
- Based on his schedule, he selects Tuesday, January 15th, 2008, and is flexible with his time. He clicks button “Search for Best Time”. (**NOTE:** Adding availabilityType=“BESTTIME” to the availability call.)
- The timeframe 5pm and 8pm is displayed. He selects continue.
- Next, he is browsing a list of treatments, to find what he likes. He determines that he would like to book Hot Stone Massage treatment, at the price of 100.00.

- He also selects a preference for "female therapist".
- Three options are displayed:
  - 5:00 – 6:00 pm
  - 6:00 – 7:00 pm
  - 7:00 – 8:00 pm
- Mr. Smith selects 6:00 pm.
- A message comes back advising him that for this treatment, special cancellation policy is in place, and he would have to cancel no less than 24 hours prior to arrival to avoid penalty.
- In case of late cancellation, a cancellation fee of 50% of treatment plus applicable charges will be applied.
- The guest is asked how they would like to guarantee their Spa booking. Options are: all major credit cards or bill to their room bill.
- Guest is selecting "room bill" option and clicks NEXT.
- Now, their profile information is displayed, which is previously already received from their hotel reservation:
  - Mr. John Smith
  - 123 Happy Lane
  - Chicago, IL, 60611, USA
  - Home Phone: +1 (312) 111-2222
  - Mobile Phone: +1 (312) 222-3333
  - Email: [john.smith@htng.com](mailto:john.smith@htng.com)
- Guest verifies that this information is correct, and clicks "book it".
- The appointment is now made in the Spa System, and Guest receives back their Spa booking ID.
- A Single Guest Itinerary is now displayed:
  - Hotel Room Reservation:
    - HTNG Hotel New York
    - Arriving Tuesday, January 15<sup>th</sup>, 2008
    - Departing Sunday, January 20<sup>th</sup>, 2008
    - Room Type – Deluxe King
    - Hotel Confirmation number 787878
    - Cancellation policy – no later then 6pm day of arrival
  - Spa Reservation:

- Location - "The Spa"
- Treatment Date – Tuesday, January 15<sup>th</sup>, 2008
- Treatment Time – 6pm – 7pm
- Arrival Time 5:45pm
- Treatment type – "Hot Stone Massage"
- Price – 100.00 USD
- Preference – Female Therapist
- Spa Confirmation number – 454545

WS – Website

SSS – Service Scheduling System

- Mr. Smith realizes that he needs to arrive to New York a day later.
- He modifies his hotel reservation and changes arrival day from January 15<sup>th</sup>, 2008 to be January 16<sup>th</sup>, 2008.
- He is advised by the website that there is a Spa reservation on the 15<sup>th</sup> to which a special cancellation policy is applied, and is asked whether he wants to modify or cancel the Spa booking.
- Mr. Smith selects his Spa booking on the screen, and selects “reschedule”. (This button can only be made available for those appointments that are “allowed” based on the cancellation policy.)
- Once he selects re-schedule, all of the preference and selection settings remain in place from the original booking, and he needs to verify that this is still his selection. He confirms that he still wants the same treatment.
- Now, he is asked to select a new date.
- Mr. Smith selects January 16<sup>th</sup>, 2008.
- Now, he is asked to select timeframe. His afternoon is more booked now, and he can only come around 6pm. So, Mr. Smith selects 6pm.
- While checking availability, the Spa system cannot find exact match for 6pm Appointment for HotStone Massage as requested.
- However, the following alternatives are displayed:
  - Alternate Time for HotStone Massage with a Female Therapist:
    - 5:45pm – 6:45pm, 100 USD
    - 6:30pm – 7:30PM, 100 USD
  - Alternate Treatments:
    - 6pm – 7pm Hot Stone Massage with a Male Therapist, 100 USD
    - 6pm – 7pm Swedish Massage with a Female Therapist, 85 USD
    - 6:15pm – 7:15pm Thai Massage with a Female Therapist, 85 USD
- Mr. Smith decides to select 6pm Swedish Massage with a Female Therapist instead.

- The system advises Mr. Smith of a 24-hour cancellation policy that applies to this treatment.
- The system then asks Mr. Smith if he wants to keep "Room Charge" guarantee method.
- If preferences are made available to guests, guest should be asked at the point to revised preference requirements.
- Once confirmed, the system returns Spa Confirmation number of 454545 (same as last time), and also the complete new itinerary
  - Hotel Room Reservation:
    - HTNG Hotel New York
    - Arriving Wednesday, January 16<sup>th</sup>, 2008
    - Departing Sunday, January 20<sup>th</sup>, 2008
    - Room Type – Deluxe King
    - Hotel Confirmation number 787878
    - Cancellation policy – no later than 6pm day of arrival
  - Spa Reservation
    - Location - "The Spa"
    - Treatment Date – Wednesday, January 15<sup>th</sup>, 2008
    - Treatment Time – 6pm – 7pm
    - Arrival Time 5:45pm
    - Treatment type – "Swedish Massage"
    - Price – 85.00 USD
    - Preference – Female Therapist
    - Spa Confirmation number – 454545

## 46.4 Cancel Spa Appointment On-Line

### Actors

WS – Website

SSS – Service Scheduling System

- Mr. Smith had a change of plans and has to cancel his trip to New York.
- He visits the Website on January 10<sup>th</sup>, and pulls up his itinerary.
- He now needs to cancel it.
- He selects both “Hotel Reservation” and “Spa Reservation” and clicks “Cancel”.

- The system verifies the timeframe, and both Hotel and Spa Reservations are available to cancel without penalties.
- Therefore, cancellation comes through and Mr. Smith is provided with a confirmation, is advised that he will not be charged any fees, and is given a cancellation number.
- **NOTE:** If Mr. Smith is cancelling within the cancellation period, options might be to (a) allow cancel but display message that Spa staff will contact him re: payment (flag in system? Or email to spa notifying to contact Mr. Smith re: cancellation penalties), or (b) make "cancel" un-clickable on the Spa UI and display message saying something like "you are within the cancellation period for this appointment, please contact the Spa directly for further assistance". (Provide link to Spa email and/or phone contact details.)

## 46.5 Make Spa Appointment on Guestroom TV – Video On Demand (VOD) System has HTNG Connection to PMS

### Actors

VOD – Video On Demand System

SSS – Service Scheduling System

- Mr. Mark Jones has checked into HTNG Hotel New York. He is staying with his wife Amanda Brown, and both are registered in their guestroom number 2525.
- Their arrival date is February 15<sup>th</sup>. Departure date for Mr. Jones is February 20<sup>th</sup>, 2008 and departure date for Ms. Brown is February 19<sup>th</sup>, 2008.
- When Mr. Jones turned on his guestroom TV, and the main VOD system menu came up. While browsing through his options, Mr. Jones came upon Spa Services menu, and saw "Book Your Spa Appointment" button on TV.
- He selects "Book Your Spa Appointment" button, and is guided to a list of treatments, their descriptions, and prices
- He determines that he would like to book Hot Stone Massage treatment, at the price of 100.00.

- VOD system is connected to the PMS via HTNG SGI specifications. Therefore, it needs to now identify which guest is making this appointment. VOD system plays the role of IDS (Itinerary Display System) using HTNG SGI spec, and goes to "Fetch Reservation" based on the room number 2525 where TV is located.
- PMS returns back two names and set of dates, and displays them on TV:
  - Mr. Mark Jones, February 15<sup>th</sup> – February 20<sup>th</sup>, 2008
  - Ms. Amanda Brown, February 15<sup>th</sup> – February 19<sup>th</sup>, 2008
- Mr. Jones selects radio button next to his name, thus verifying his identity.
- Since VOD system is aware of his arrival and departure dates, it gives Mr. Jones the following dates to select from:
  - February 15th (arrival date)
  - February 16th
  - February 17th
  - February 18th
  - February 20th (departure date)
- Based on his schedule, he would like to book it for Wednesday, February 16<sup>th</sup>, 2008, and is flexible with his time.
- He selects the date of February 16th, and then selects afternoon time range, which is sometime between 5pm and 8pm.
- He also selects a preference for "female therapist".
- A list of available treatment times is displayed.
- Mr. Jones selects 6pm time slot.
- A message comes back advising him that for this treatment, special cancellation policy is in place, and he would have to cancel no less than 24 hours prior to arrival to avoid penalty.
- In case of late cancellation, a cancellation fee of 50% of treatment plus applicable charges will be applied. Amount of 100 x 50% plus 15% tax equals to \$57.50 is displayed.
- A separate message comes up advising the guest that "he is within cancellation window" and if would not be able to cancel without penalty. He acknowledges the policy and clicks "OK".
- The guest is asked how they would like to guarantee their Spa booking. Options are: all major credit cards or bill to their room bill.
- Guest is selecting "room bill" option and clicks NEXT.
- The appointment is now made in the Spa System, and Guest receives back their Spa booking ID.
- Their In-Hotel Itinerary is now displayed:
  - Hotel Room Reservation:
    - Arriving Tuesday, February 15<sup>th</sup>, 2008

- Departing Sunday, February 20<sup>th</sup>, 2008
- Spa Reservation:
  - Location - "The Spa"
  - Treatment Date – Wednesday, February 16<sup>th</sup>, 2008
  - Treatment Time – 6pm – 7pm
  - Arrival Time 5:45pm
  - Treatment type – "Hot Stone Massage"
  - Price – 100.00 USD
  - Preference – Female Therapist
  - Spa Confirmation number – 454545

#### 46.6 Modify Spa Appointment on Guestroom TV

- Mr. Jones realizes that he will be running late to his Spa appointment on the 16<sup>th</sup> and needs to change the time of his treatment.

- Mr. Jones turns on his guestroom TV, and navigating through the VOD menu, goes to Spa Services area. VOD system already knows that Mr. Jones has a Spa appointment, and therefore, "My Appointments" button is displayed.
- Mr. Jones clicks "My Appointments" button. Since his wife, Amanda Brown has also made her appointments, now both of their names are displayed, and he needs to select who's appointments he will modify:
  - Appointments for Mr. Mark Jones
  - Appointments for Ms. Amanda Brown
- Mr. Jones selects his name.
- Now, a summary of his appointments is displayed:
  - Spa Appointment, February 16<sup>th</sup>, 6pm – 7pm
- Next to the appointment, a "Reschedule" button is available. This button can only be made available for those appointments that are "allowed" based on the cancellation policy.
- Once he selects "re-schedule" option, all of the preference and selection settings remain in place from the original booking, and he needs to verify that this is still his selection. He confirms that he still wants the same treatment.
- Now, he is asked to select a new date.
  - February 16th
  - February 17th
  - February 18th
  - February 20th (departure date)
- Mr. Jones selects February 16<sup>th</sup>, 2008.
- Now, he is asked to select a new timeframe or exact time. His afternoon is more booked now, and he can only come around 8pm. So, Mr. Jones selects 8pm.
- While checking availability, the Spa system cannot find exact match for 8pm Appointment for HotStone Massage as requested.
- However, the following alternatives are displayed:
  - Alternate Time for HotStone Massage with a Female Therapist:
    - 7:45pm – 8:45pm, 100 USD
    - 8:15pm – 9:15PM, 100 USD
  - Alternate Treatments:
    - 8pm – 9pm Hot Stone Massage with a Male Therapist, 100 USD
    - 8pm – 9pm Swedish Massage with a Female Therapist, 85 USD
    - 7:15pm – 8:15pm Thai Massage with a Female Therapist, 85 USD
- Mr. Jones decides to select 7:45pm HotStone Massage with a Female Therapist instead.

- The system advises Mr. Jones of a 24-hour cancellation policy that applies to this treatment.
- The system then asks Mr. Jones if he wants to keep "Room Charge" guarantee method.
- Once confirmed, the system returns Spa Confirmation number of 454545 (same as last time), and also the complete new itinerary:
  - Hotel Room Reservation:
    - Arriving Tuesday, February 15<sup>th</sup>, 2008
    - Departing Sunday, February 20<sup>th</sup>, 2008
  - Spa Reservation:
    - Location - "The Spa"
    - Treatment Date – Wednesday, February 16<sup>th</sup>, 2008
    - Treatment Time – 7:45pm – 8:45pm
    - Arrival Time 8:30pm
    - Treatment type – "Hot Stone Massage"
    - Price – 100.00 USD
    - Preference – Female Therapist
    - Spa Confirmation number – 454545

#### 46.7 Cancel Spa Appointment on Guestroom TV – Outside of Cancellation Window

- Upon his arrival to the HTNG Hotel New York on February 15<sup>th</sup>, 2008, Mr. Jones has made a reservation for the Spa on February 17<sup>th</sup>, 2008.
- The following day, he realizes that he would not be able to make the Spa appointment.
- Mr. Jones turns on his guestroom TV, and navigating through the VOD menu, goes to Spa Services area. VOD system already knows that Mr. Jones has a Spa appointment, and therefore, "My Appointments" button is displayed.
- Mr. Jones clicks "My Appointments" button. Since his wife, Amanda Brown has also made her appointments, now both of their names are displayed, and he needs to select who's appointments he will modify:
  - Appointments for Mr. Mark Jones
  - Appointments for Ms. Amanda Brown
- Mr. Jones selects his name.
- Now, a summary of his appointments are displayed.
  - Spa Appointment, February 16<sup>th</sup>, 7:45pm – 8:45pm

- Next to the appointment, a "Cancel" button is available. This button can only be made available for those appointments that are "allowed" based on the cancellation policy.
- Mr. Jones selects "Cancel" button.
- Confirmation of Cancellation screen comes up, giving him cancellation number.

## 46.8 Make On-Line Dining Reservation

### Actors

WS – Website

SSS – Service Scheduling System

- Mr. John Smith is browsing a website of "HTNG Hotels and Resorts".
- He then makes a reservation to a stay in HTNG Hotel New York", arriving on January 15<sup>th</sup> and Departing on January 20<sup>th</sup>, 2008.
- While browsing a website, Mr. Smith notices that there is a nice new restaurant "Generation" at the hotel, and decides to make a Dining booking.
- First, Mr. Smith is given a list of dates within the timeframe of his hotel stay. Additional button called "on a different date" is available, in case he wants to reserve dining appointment for before or after his hotel stay. Mr. Smith selects Wednesday, January 16<sup>th</sup>, 2008.

- Next, he is asked to select a meal period for which dining appointments are accepted, and also is asked to provide the number of people in the party. He selects Dinner for 2 people.
- Available start times are displayed, and he selects 7:30 (if no tables are available, a list of alternate available times should be displayed – perhaps a lunch or a dinner on another day).
- Mr. Smith is now asked to denote whether this dining appointment is associated with any special occasion.
- At the same time, any additional preferences are denoted – any special requests for table location (private or by the window, smoking or non-smoking, etc).
- Guest is given the opportunity to enter free-form text information for any additional instructions.
- Guest is now advised on any special requirements – for example, Dress Code “Jacket Required”.
- If restaurant has any special guarantee, pre-payment, or cancellation policy, the details of this policy is now displayed. Guest is being asked to acknowledge it.
- The guest is asked how they would like to guarantee their Dining booking. Options are: all major credit cards or bill to their room bill.
- Guest is selecting “room bill” option and clicks NEXT.
- Now, their profile information is displayed, which is previously already received from their hotel reservation:
  - Mr. John Smith
  - 123 Happy Lane
  - Chicago, IL, 60611, USA
  - Home Phone: +1 (312) 111-2222
  - Mobile Phone: +1 (312) 222-3333
  - Email: [john.smith@htng.com](mailto:john.smith@htng.com)
- Guest verifies that this information is correct, and clicks “book it”.
- The appointment is now made in the Dining System, and Guest receives back their Dining booking ID.
- A Single Guest Itinerary is now displayed:
  - Hotel Room Reservation:
    - HTNG Hotel New York
    - Arriving Tuesday, January 15<sup>th</sup>, 2008
    - Departing Sunday, January 20<sup>th</sup>, 2008
    - Room Type – Deluxe King
    - Hotel Confirmation number 787878
    - Cancellation policy – no later then 6pm day of arrival

- o Dining Reservation:
  - Location – "Generation"
  - Appointment for – Dinner
  - Date and time – Wednesday, January 16<sup>th</sup>, 2008, 7:30PM
  - Treatment Time – 6pm – 7pm
  - Special instructions – "Dress Code – Jacket Required"
  - Preference – Quiet Table, Non Smoking
  - Occasion – "Anniversary"
  - Special note to restaurant – "this is a surprise"
  - Dining Confirmation number – 787878

SSS – Service Scheduling System

- Mr. John Smith is browsing a website of "HTNG Hotels and Resorts".
- While browsing the website, Mr. Smith notices that he can buy gift certificates on-line.
- First, he is browsing a list of gift certificates (50 USD, 100 USD, etc.), to find what he likes.
- He determines that he would like to order a value gift certificate, at the price of 100.00 USD.
- With one click one the shopping cart icon near by the 100 USD value gift certificate he takes the gift certificate in the cart.
- After that he clicks "Checkout".
- Mr. Smith is not registered, therefore he has to enter name, address, email, and password. (The email and password can be used for future registration.)
- After the registration process an overview appears on the screen with all ordered gift certificates.
- On the same screen he accepts the general terms and conditions.
- Mr. Smith clicks on the dedication text icon next to the ordered gift certificate and enters "Happy Birthday!".

- The guest is asked how they would like to pay the ordered gift certificates. Options are: all major credit cards or gift certificate.
- Guest is selecting "Credit card" option and clicks NEXT.
- Mr. Smith choose Visa and enters their credit card number, CVV code, and the expiration date of the credit card.
- Guest verifies that this information is correct, and clicks "Order".
- The gift certificate is now created in the SSS, and Guest receives back their gift certificate with a download option.
- He clicks "Download" and prints the gift certificate on his printer.

## 46.10 Sale of Retail Items with Gift Certificate Payment

### Actors

WS – Website

SSS – Service Scheduling System

- Mr. John Smith is browsing a website of "HTNG Hotels and Resorts".
- While browsing the website, Mr. Smith notices that he can buy retail items on-line. That's a good chance to pay with the gift certificate, which he got to his birthday from his wife last year.
- First, he is browsing a list of items (Facial Cleansing Milk, Day Cream, Night Cream, Facial Toner, Anti-Aging Cream, etc.), to find which product his wife could like.
- He determines to order one Anti-Aging Cream (150 USD) and one Day Cream (100 USD).
- He takes the products in the shopping cart.
- The shipping costs(USD 10) are added automatically.
- After that he clicks "Checkout".
- Mr. Smith is already registered, so he only has to enter their email and password.
- After the registration process an overview appears on the screen with all ordered items.
- On the same screen he accepts the general terms and conditions.
- The guest is asked how they would like to pay the ordered items. Options are: all major credit cards or gift certificate.
- Guest is selecting "Gift certificate" option and clicks NEXT.
- Mr. Smith enters the number and the verification code of their gift certificate.
- The entered gift certificate has a value of 200 USD.
- Mr. Smith pays the remaining value of 50 USD with credit card.
- Guest verifies that this information is correct, and clicks "Order".

XML Messages (without SOAP header and namespace declarations):

WS -> SSS: Fetch the detailed information of the gift certificate, because the website has to know the exact value of the gift certificate to calculate the open value.

```

***Part 7     Food and Beverage Ordering, Version 1.0***

## Chapter 47 Document Information (Part 7)

### 47.1 Change History

Version	Date	Author	Comments
0.1	6-24-2008	Markus Leibundgut, MenuLogic	Created First Draft
0.2	9-11-2008	Maxime Clerk-Lamalice, Extenway Solutions Inc.	Added Business Process section
0.3	9-11-2008	Chris Laffoon, IBM Corporation	Added Message Specification section
0.4	9-12-2008	Chris Laffoon	Minor edits during team teleconference
0.5	9-15-2008	Maxime Clerk-Lamalice	Changed TS for device in the use-case section and removed use-cases reference number
0.6	9-18-2008	Chris Laffoon	Added comments to Message Specification section
0.7	9-19-2008	Chris Laffoon	Minor edits during team teleconference
1.0	9-22-2008	Chris Laffoon	Final Documentation cleanup

### 47.2 Purpose

This document defines the Hotel Technology Next Generation ("HTNG") Food and Beverage (F&B) Ordering Web Services interface and messaging.

### 47.3 Scope

This document defines the web service requests and responses that allow a device to communicate with a Point of Sale (POS) system in order to create an F&B order in a POS system, to update an existing order, to split an existing order, to receive status information, and to update menu information from the POS system.

This document does not currently cover web services related to managing payment (Cash/Credit Card/Folio – Property Management System). This enhancement is to be added in future releases.

A device can be an interactive menu board, an in-room TV, self service terminals, mobile devices used by guests, websites, IP phones in guest rooms, or similar units.

### 47.4 Audience

This document is intended for use by developers and systems integrators who wish to interface a Food & Beverage ordering device to a POS system for processing.

Other IT professionals will find this document useful in gaining a general understanding of how a Food & Beverage ordering device.

## 47.5 Terminology

For the purpose of this document the following terms have been defined as follows:

Term	Definition
POS	Point of Sale or Point of Service

## Chapter 48 Overview

Typical service requestors may be kiosk, room service, and banqueting applications; typical service providers are F&B and retail POS applications.

This document provides an overview of various requests and responses and detailed XML schemas for each.

The following request/response message pairs have been implemented (more detail of each message is found in Chapter 48):

- Get Configuration Information – This message pair allows a requesting application to retrieve menu item, product, promotion, service charge, payments and general parameter information. Typically it might be used to retrieve available menu items, name, images and prices for a specific outlet.
- Calculate Transaction Totals – It is important that transaction totals (tax, discounts, amounts due) be calculated exactly and consistently, therefore having the service provider perform this (rather than each application) is important. This message pair provides this ability.
- Post New Transaction – This enables a requesting application to post a new transaction to the service provider. Typically it might be used by a STB application to place a guest's room service order. It also includes a requested delivery date and time.
- Get Transaction – This allows the requesting application to retrieve a transaction, either to just display it or to append additional lines to it.
- Get Transaction Delivery Status – This allows the requesting application to get the delivery status (in process, on the way) and the expected delivery date and time for the specified transaction.
- Split Transaction – This enables the requesting application/device request a transaction to be split into multiple transactions.

A diagram of these transactions is shown below:

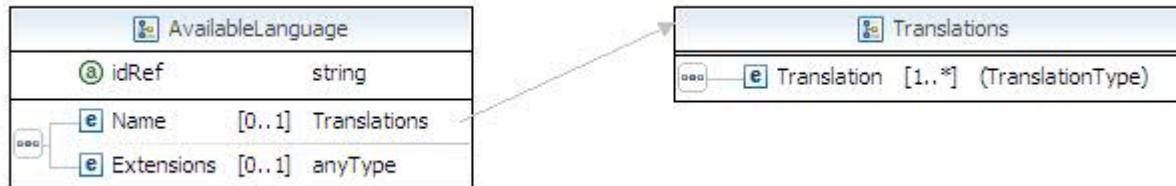

FoodBevOrderingSoapPortType		
<b>GetConfigInfo</b>		
 input	 parameters	 GetConfigInfoRequest
 output	 parameters	 GetConfigInfoResponse
<b>CalculateTotals</b>		
 input	 parameters	 CalculateTransactionTotalsRequest

## Chapter 49 Message Specification

### 49.1 Common Message Types

This section contains details about the common types found in the FoodBevOrdering.xsd used in one or more of the messages that follow. These types are sorted alphabetically for easier access.

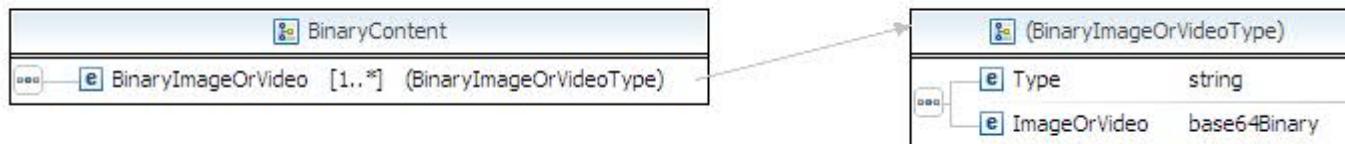

#### 49.1.1 AvailableLanguage

```
<xs:complexType name="AvailableLanguage">
  <xs:sequence>
    <xs:element name="Name" type="fbt:Translations" minOccurs="0" />
    <xs:element name="Extensions" minOccurs="0" />
  </xs:sequence>
  <xs:attribute name="idRef" type="xs:string" use="required" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Name	element	Translations	optional	Translations for this language
Extensions	element		optional	Blank extension point
idRef	attribute	string	required	Reference identifier for this available language

#### 49.1.2 BinaryContent

```
<xs:complexType name="BinaryContent">
  <xs:sequence>
    <xs:element name="BinaryImageOrVideo" maxOccurs="unbounded">
      <xs:complexType>
        <xs:sequence>
          <xs:element name="Type" type="xs:string" />
          <xs:element name="ImageOrVideo" type="xs:base64Binary" />
        </xs:sequence>
      </xs:complexType>
    </xs:element>
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
BinaryImageOrVideo	element	(BinaryImageOrVideo)*	required/multiple	Single binary image or video
Type	element	string	required	Description for this type of binary content
ImageOrVideo	element	base64Binary	required	Image or video encoded in W3C base 64 binary

\*anonymous type

#### 49.1.3 ConfigInfoRequestType

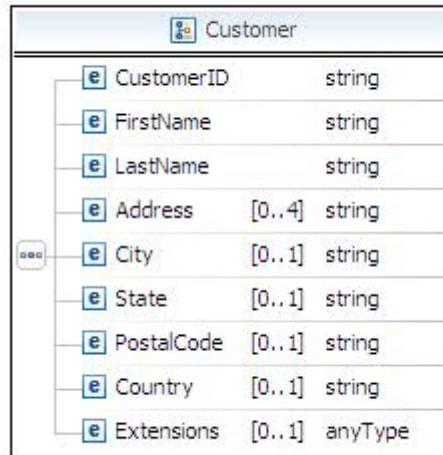

```
<xs:simpleType name="ConfigInfoRequestType">
  <xs:restriction base="xs:string">
    <xs:enumeration value="MODIFIERDEFINITIONS" />
    <xs:enumeration value="MENUITEMDEFINITIONS" />
    <xs:enumeration value="OUTOFMENUITEMDEFINITIONS" />
    <xs:enumeration value="SERVICECHARGEDEFINITIONS" />
    <xs:enumeration value="DISCOUNTPROMOTIONDEFINITIONS" />
    <xs:enumeration value="TENDERDEFINITIONS" />
    <xs:enumeration value="ORDERTYPEDEFINITIONS" />
    <xs:enumeration value="AVAILABLELANGUAGES " />
    <xs:enumeration value="GENERALPARAMETERDEFINITIONS" />
  </xs:restriction>
</xs:simpleType>
```

Enumeration Type	Enumeration Value	Comments
string	MODIFIERDEFINITIONS	Enumeration value for getting modifier definitions
string	MENUITEMDEFINITIONS	Enumeration value for getting menu item definitions
string	OUTOFMENUITEMDEFINITIONS	Enumeration value for out of menu item definitions
string	SERVICECHARGEDEFINITIONS	Enumeration value for service charge definitions
string	DISCOUNTPROMOTIONDEFINITIONS	Enumeration value for discount promotions definitions
string	TENDERDEFINITIONS	Enumeration value for tender definitions

string	ORDERTYPEDEFINITIONS	Enumeration value for order type definitions
string	AVAILABLELANGUAGES	Enumeration value for available languages
string	GENERALPARAMETERDEFINITIONS	Enumeration value for general parameters definitions

49.1.4

### Customer

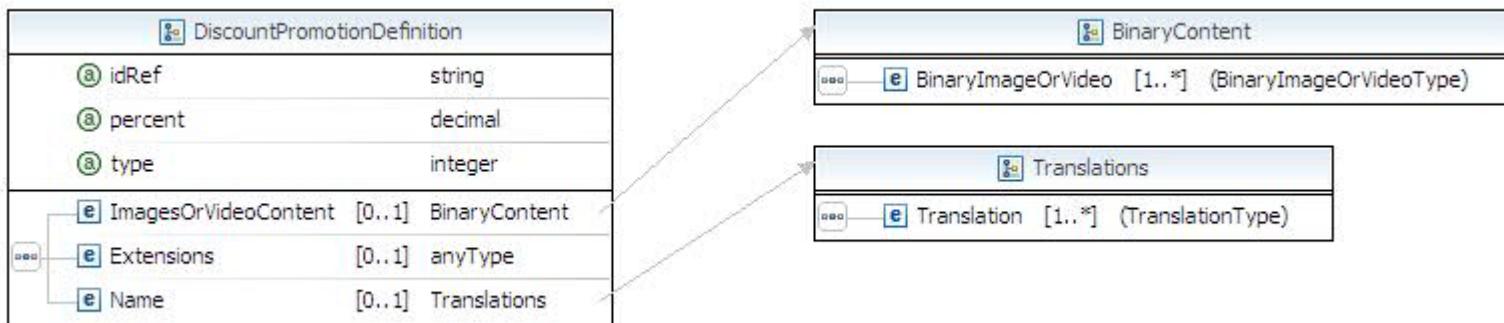

```

<xs:complexType name="Customer">
  <xs:sequence>
    <xs:element name="CustomerID" type="xs:string" />
    <xs:element name="FirstName" type="xs:string" />
    <xs:element name="LastName" type="xs:string" />
    <xs:element name="Address" type="xs:string" minOccurs="0" maxOccurs="4" />
    <xs:element name="City" type="xs:string" minOccurs="0" />
    <xs:element name="State" type="xs:string" minOccurs="0" />
    <xs:element name="PostalCode" type="xs:string" minOccurs="0" />
    <xs:element name="Country" type="xs:string" minOccurs="0" />
    <xs:element name="Extensions" minOccurs="0" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
CustomerID	element	string	required	Unique ID for this customer
FirstName	element	string	required	First name of customer
LastName	element	string	required	Last name of customer

Address	element	string	optional/ max 4	One address line (maximum of 4)
City	element	string	optional	City where customer is located
State	element	string	optional	State where customer is located
PostalCode	element	string	optional	Postal code for customer
Country	element	string	optional	Country where customer is located
Extensions	element		optional	Blank extension element for adding more customer details

#### 49.1.5 DiscountPromotionDefinition

```

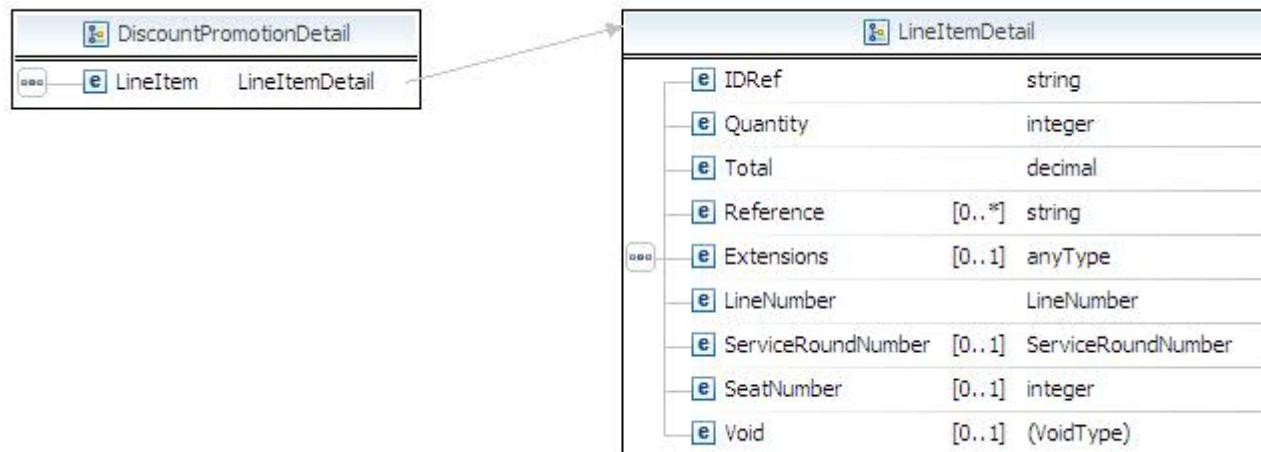

<xs:complexType name="DiscountPromotionDefinition">
  <xs:sequence>
    <xs:element name="ImagesOrVideoContent" type="fbt:BinaryContent" minOccurs="0"/>
    <xs:element name="Extensions" minOccurs="0"/>
    <xs:element name="Name" type="fbt:Translations" minOccurs="0"/>
  </xs:sequence>
  <xs:attribute name="idRef" type="xs:string" use="required"/>
  <xs:attribute name="percent" type="xs:decimal" use="optional"/>
  <xs:attribute name="type" type="xs:integer" use="required"/>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
ImageOrVideoContent	element	BinaryContent	optional	Images or videos for this discount promotion
Extensions	element		optional	Blank extension for more discount promotion details
Name	element	Translations	optional	Name of the discount promotion
idRef	attribute	string	required	Reference identifier for this discount promotion
percent	attribute	decimal	optional	Percent discount for this particular promotion

type	attribute	integer	required	Vendor-specific discount promotion type code
------	-----------	---------	----------	--

49.1.6

### DiscountPromotionDetail

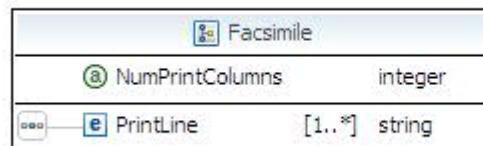

```

<xs:complexType name="DiscountPromotionDetail">
  <xs:sequence>
    <xs:element name="LineItem" type="fbt:LineItemDetail" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
LineItem	element	LineItemDetail	required	A line item that captures the discount promotion details

49.1.7

### Facsimile

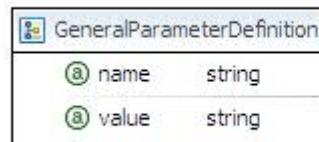

```

<xs:complexType name="Facsimile">
  <xs:sequence>
    <xs:element name="PrintLine" type="xs:string" minOccurs="1" maxOccurs="unbounded" />
  </xs:sequence>
</xs:complexType>
  
```

```
</xs:sequence>
<xs:attribute name="NumPrintColumns" type="xs:integer" use="required" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
PrintLine	element	string	required/multiple	One line of text to be printed that is specified number of columns (characters) long
NumPrintColumns	element	integer	required	Number of print columns (characters) for each line of text

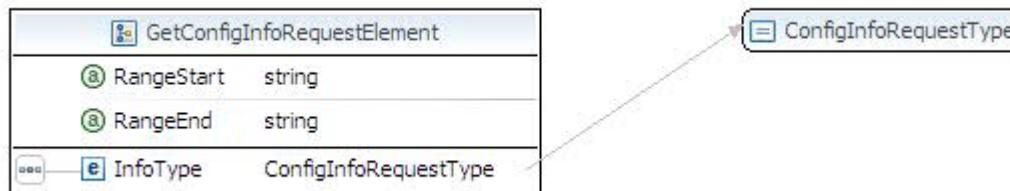

#### 49.1.8 General Parameter Definition

```
<xs:complexType name="GeneralParameterDefinition">
  <xs:attribute name="name" type="xs:string" use="required" />
  <xs:attribute name="value" type="xs:string" use="required" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
name	attribute	string	required	Name of general parameter
value	attribute	string	required	Value of general parameter

#### 49.1.9 GetConfigInfoRequestElement

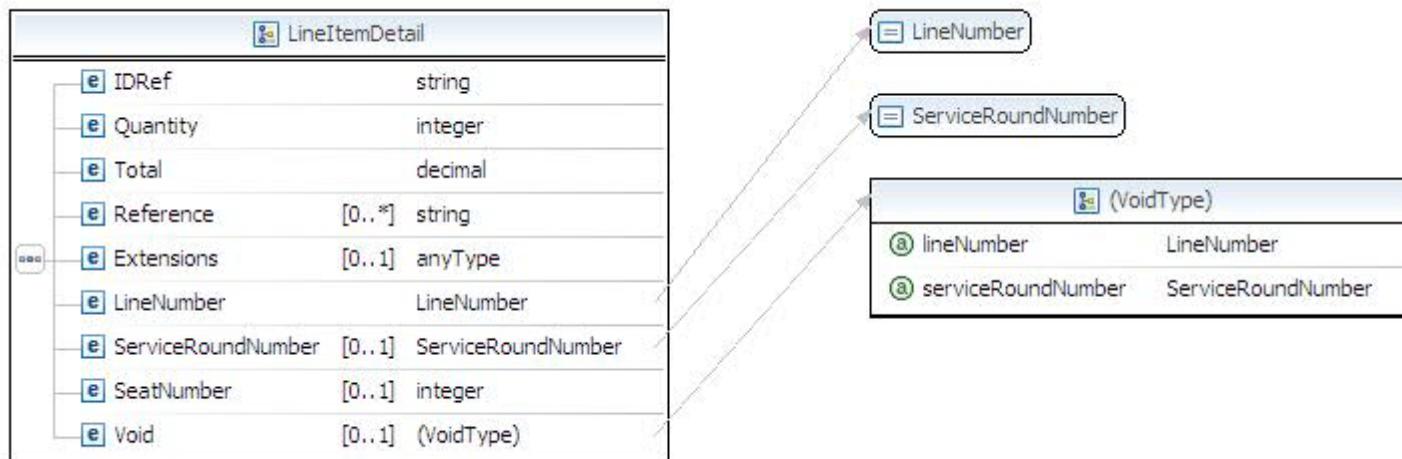

```
<xs:complexType name="GetConfigInfoRequestElement">
  <xs:sequence>
    <xs:element name="InfoType" type="fbt:ConfigInfoRequestType" />
  </xs:sequence>
  <xs:attribute name="RangeStart" type="xs:string" use="optional" />
</xs:complexType>
```

```
<xs:attribute name="RangeEnd" type="xs:string" use="optional" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
InfoType	element	ConfigInfoRequestType	required	Type of configuration information to request
RangeStart	attribute	string	optional	
RangeEnd	attribute	string	optional	

#### 49.1.10 LineItemDetail

```

<xs:complexType name="LineItemDetail">
  <xs:sequence>
    <xs:element name="IDRef" type="xs:string" />
    <xs:element name="Quantity" type="xs:integer" />
    <xs:element name="Total" type="xs:decimal" />
    <xs:element name="Reference" type="xs:string" minOccurs="0" maxOccurs="unbounded" />
    <xs:element name="Extensions" minOccurs="0" />
    <xs:element name="LineNumber" type="fbt:LineNumber" />
    <xs:element name="ServiceRoundNumber" type="fbt:ServiceRoundNumber" minOccurs="0" />
    <xs:element name="SeatNumber" type="xs:integer" minOccurs="0" />
    <xs:element name="Void" minOccurs="0">
      <xs:complexType>
        <xs:attribute name="lineNumber" type="fbt:LineNumber" use="required" />
        <xs:attribute name="serviceRoundNumber" type="fbt:ServiceRoundNumber" use="required" />
      </xs:complexType>
    </xs:element>
  </xs:sequence>
</xs:complexType>
  
```

</xs:sequence> </xs:complexType>				
Name	Type	Data Type	Use	Comments
IDRef	element	string	required	Reference identifier of item that this line refers to
Quantity	element	integer	required	Quantity of this item
Total	element	decimal	required	Total price for this line item
Reference	element	string	optional/multiple	Additional reference text for this line number
Extensions	element		optional	Blank extension for more line item details
LineNumber	element	LineNumber	required	Line Number (as described below >0)
ServiceRoundNumber	element	ServiceRoundNumber	optional	
SeatNumber	element	integer	optional	Seat number of customer who this line item is for
Void	element	(Void)*	optional	
lineNumber	attribute	LineNumber	required	
serviceRoundNumber	attribute	ServiceRoundNumber	required	

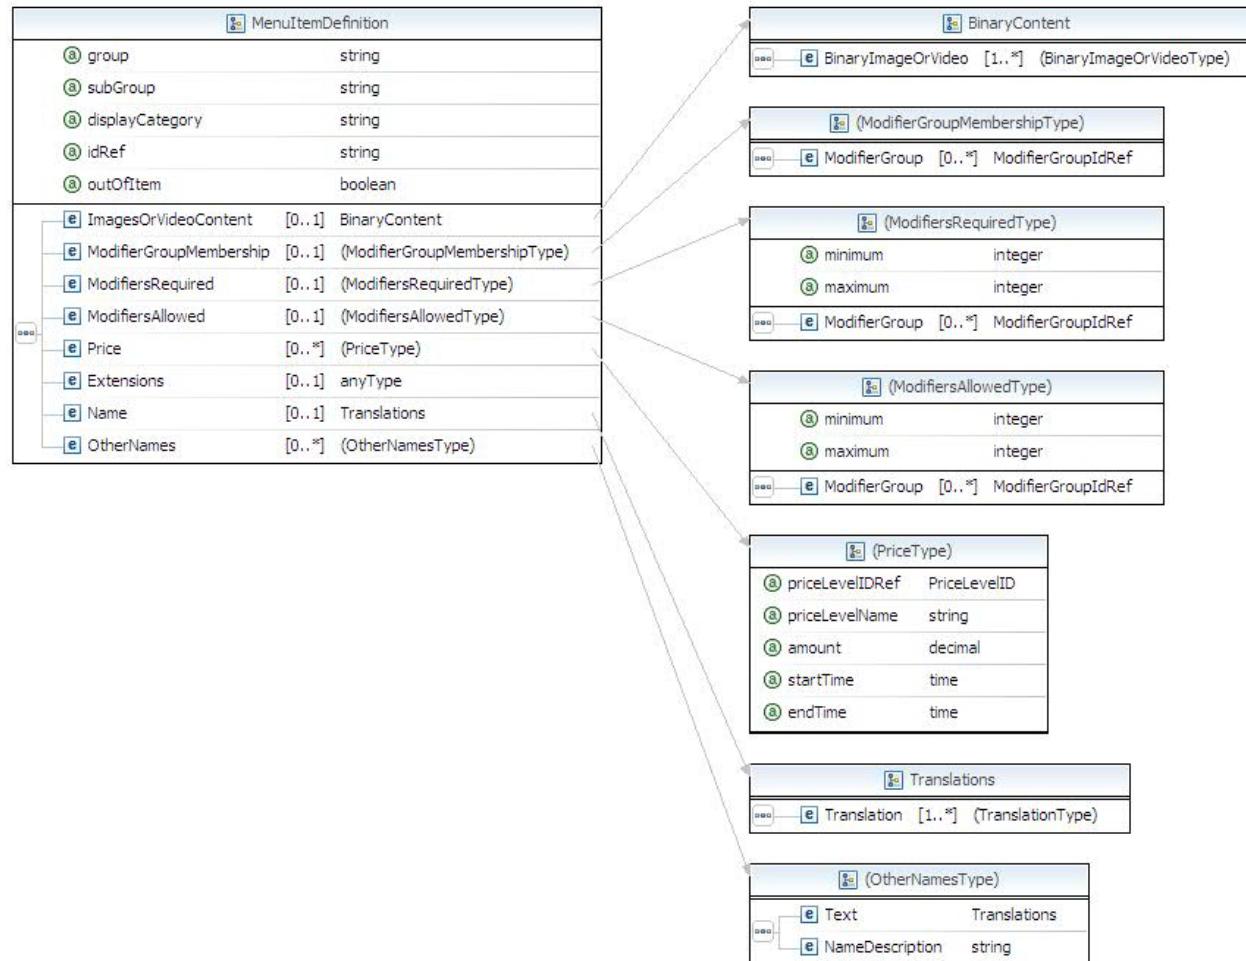

\*anonymous type

#### 49.1.11 LineNumber

```
<xs:simpleType name="LineNumber">
  <xs:restriction base="xs:integer">
    <xs:minInclusive value="1" />
  </xs:restriction>
</xs:simpleType>
```

49.1.12

### MenuItemDefinition

```

<xs:complexType name="MenuItemDefinition">
  <xs:sequence>
    <xs:element name="ImagesOrVideoContent" type="fbt:BinaryContent" minOccurs="0" />
    <xs:element name="ModifierGroupMembership" minOccurs="0">
      <xs:complexType>
        <xs:sequence>
          <xs:element name="ModifierGroup" type="fbt:ModifierGroupIdRef" minOccurs="0" maxOccurs="unbounded" />
        </xs:sequence>

Name	Type	Data Type	Use	Comments
ImagesOrVideoContent	element	BinaryContent	optional	Image or video content for this menu item

ModifierGroupMembership	element	(ModifierGroupMembership)*	optional	Modifier Group that this menu item belongs to
ModifierGroup	element	ModifierGroupIdRef	optional/multiple	Reference identifier for modifier group (string)
ModifiersRequired	element	(ModifiersRequired)*	optional	Contains required modifiers for this menu item, if any
ModifierGroup	element	ModifierGroupIdRef	optional/multiple	Reference identifier for modifier group that is required
minimum	attribute	integer	optional	Minimum number of modifiers that have to be chosen
maximum	attribute	integer	optional	Maximum number of modifiers that can be chosen
ModifiersAllowed	element	(ModifiersAllowed)*	optional	Contains modifiers allowed, but not required for this menu item, if any
ModifierGroup	element	ModifierGroupIdRef	optional/multiple	Reference identifier for modifier group that is allowed
minimum	attribute	integer	optional	Minimum number of modifiers that have to be chosen
maximum	attribute	integer	optional	Maximum number of modifiers that can be chosen
Price	element	(Price)*	optional/multiple	Price(s) of this menu item...as defined in the following attributes
priceLevelIDRef	attribute	PriceLevelID	required	Reference identifier for this price level
priceLevelName	attribute	string	optional	Name for the given price level identified
amount	attribute	decimal	optional	Price amount
startTime	attribute	time	optional	Time when this price starts going into effect
endTime	attribute	time	optional	Time when this price ends from being in effect
Extensions	element		optional	Blank extension for more menu item definition details
Name	element	Translations	optional	Name of this menu item, as defined in relevant translations
OtherNames	element	(OtherNames)*	optional/multiple	Other names for this menu item
Text	element	Translations	required	Text of another name...as defined in relevant translations
NameDescriptions	element	string	required	Description of this other name
group	attribute	string	optional	Optional group to assign this menu item to
subGroup	attribute	string	optional	Optional subgroup to assign this menu item to
displayCategory	attribute	string	optional	Category to display this menu item under
idRef	attribute	string	required	Reference identifier for this menu item
outOfItem	attribute	boolean	optional	Whether the POS is out of this item

### MenuItemDetail

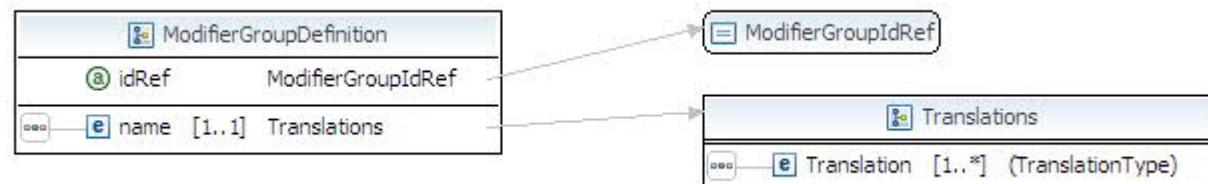

```

<xs:complexType name="MenuItemDetail">
  <xs:sequence>
    <xs:element name="LineItem" type="fbt:LineItemDetail" />
    <xs:element name="PriceLevelIDRef" type="fbt:PriceLevelID" minOccurs="0" />
    <xs:element name="SKU" type="xs:string" minOccurs="0" />
    <xs:element name="Modifiers" type="fbt:MenuItemDetail" minOccurs="0" maxOccurs="unbounded" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
LineItem	element	LineItemDetail	required	Line item that describes the menu item that is being ordered
PriceLevelIDRef	element	PriceLevelID	optional	Reference identifier for the price level used for this menu item

SKU	element	string	optional	
Modifiers	element	MenuItemDetail	optional/ multiple	Modifiers selected for this menu item

#### 49.1.14 ModifierGroupDefinition

```

<xs:complexType name="ModifierGroupDefinition">
  <xs:sequence>
    <xs:element name="name" type="fbt:Translations" minOccurs="1" />
  </xs:sequence>
  <xs:attribute name="idRef" type="fbt:ModifierGroupIdRef" use="required" />
</xs:complexType>
  
```

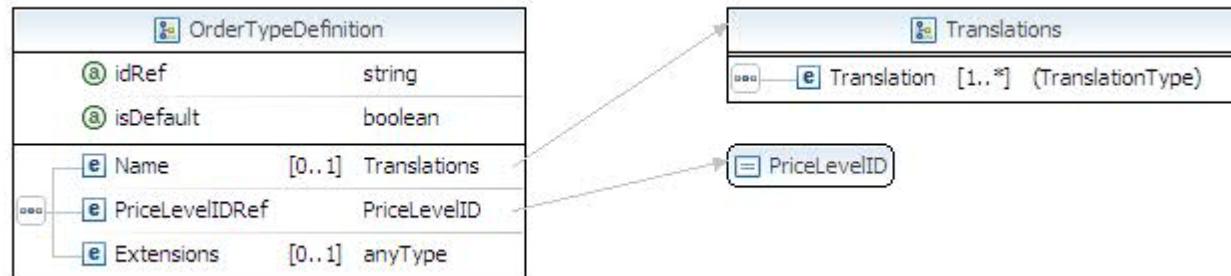

Name	Type	Data Type	Use	Comments
name	element	Translations	required	Name of this modifier group...as described in relevant translations
idRef	attribute	ModifierGroupIdRef	required	Reference identifier for this modifier group

#### 49.1.15 ModifierGroupIdRef

```

<xs:simpleType name="ModifierGroupIdRef">
  <xs:restriction base="xs:string"/>
</xs:simpleType>
  
```

#### 49.1.16 OrderTypeDefinition

```

<xs:complexType name="OrderTypeDefinition">
  <xs:sequence>
    <xs:element name="Name" type="fbt:Translations" minOccurs="0" />
    <xs:element name="PriceLevelIDRef" type="fbt:PriceLevelID" />
    <xs:element name="Extensions" minOccurs="0" />
  </xs:sequence>
  <xs:attribute name="idRef" type="xs:string" use="required" />
  <xs:attribute name="isDefault" type="xs:boolean" use="optional" />
</xs:complexType>
  
```

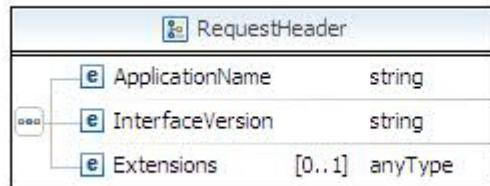

Name	Type	Data Type	Use	Comments
Name	element	Translations	optional	Name of this order type
PriceLevelIDRef	element	PriceLevelID	required	Reference identifier for the price level used in this order type
Extensions	element		optional	Blank extension for more order type definition details
idRef	attribute	string	required	Reference identifier for this order type
isDefault	attribute	boolean	optional	Flag indicating whether this order type is default

#### 49.1.17 PriceLevelID

```

<xs:simpleType name="PriceLevelID">
  <xs:restriction base="xs:string"/>
</xs:simpleType>
  
```

#### 49.1.18 RequestHeader

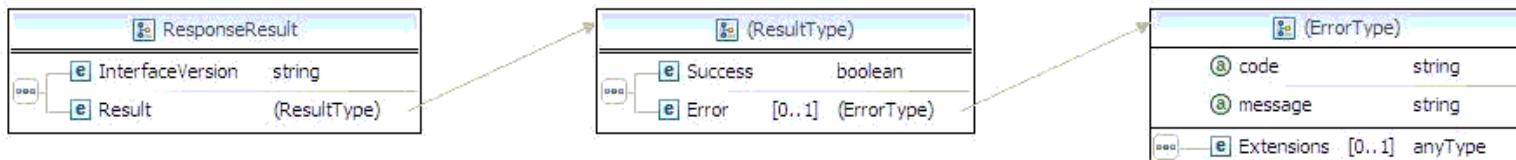

```

<xs:complexType name="RequestHeader">
  <xs:sequence>
    <xs:element name="ApplicationName" type="xs:string" />
    <xs:element name="InterfaceVersion" type="xs:string" />
    <xs:element name="Extensions" minOccurs="0" />
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
ApplicationName	element	string	required	Name of application sending request
InterfaceVersion	element	string	required	Version of the interface that this request is conforming to
Extensions	element		optional	Blank element for additional request header information

#### 49.1.19 ResponseResult

```

<xs:complexType name="ResponseResult">
  <xs:sequence>
    <xs:element name="InterfaceVersion" type="xs:string" />
    <xs:element name="Result">
      <xs:complexType>
        <xs:sequence>
          <xs:element name="Success" type="xs:boolean" />
          <xs:element name="Error" minOccurs="0">
            <xs:complexType>
              <xs:sequence>
                <xs:element name="Extensions" minOccurs="0" />
              </xs:sequence>
            </xs:complexType>
          </xs:element>
        </xs:sequence>
      </xs:complexType>
    </xs:element>
  </xs:sequence>
</xs:complexType>
  
```

```

        </xs:sequence>
        <xs:attribute name="code" type="xs:string" use="required" />
        <xs:attribute name="message" type="xs:string" use="required" />
    </xs:complexType>
</xs:element>
</xs:sequence>
</xs:complexType>
</xs:element>
</xs:sequence>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
InterfaceVersion	element	string	required	Version of the interface that this response is conforming to
Result	element	(ResultType)*	required	Result of the request processing
Success	element	Boolean	required	Flag indicating whether the request processing was successful
Error	element	(ErrorType)*	optional	Description of errors that occurred during request processing
Extensions	element		optional	Blank element for additional error details
code	attribute	string	required	Code that represents the type of error
message	attribute	string	required	Message to accompany code for this error

\*anonymous type

#### 49.1.20 ServiceChargeDefinition

```

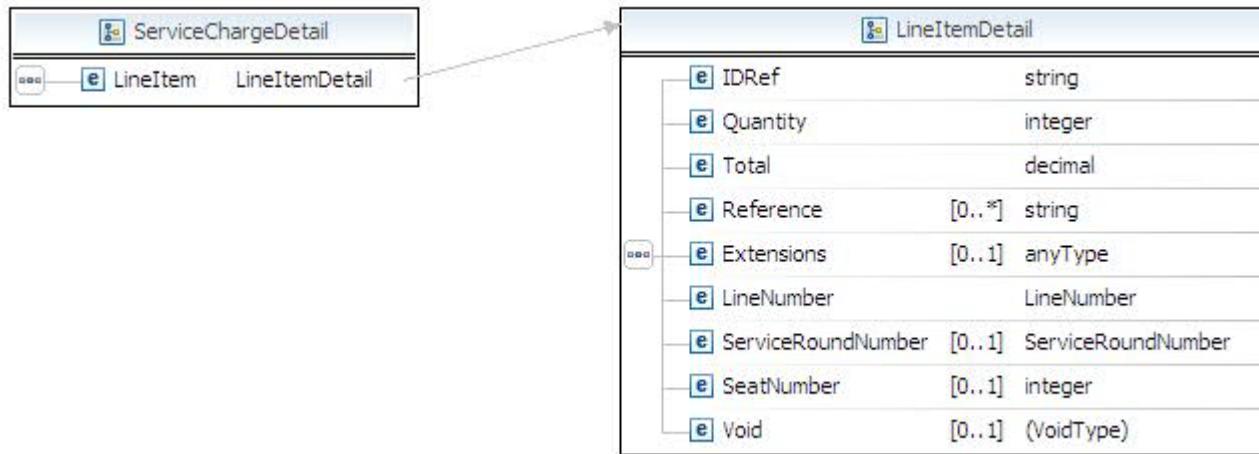

<xs:complexType name="ServiceChargeDefinition">
    <xs:sequence>
        <xs:element name="ImagesOrVideoContent" type="fbt:BinaryContent" minOccurs="0" />
        <xs:element name="Extensions" minOccurs="0" />
        <xs:element name="Name" type="fbt:Translations" minOccurs="0" />
    </xs:sequence>

```

```
</xs:sequence>
<xs:attribute name="percent" type="xs:decimal" use="optional" />
<xs:attribute name="type" type="xs:integer" use="required" />
<xs:attribute name="idRef" type="xs:string" use="required" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
ImagesOrVideoContent	element	BinaryContent	optional	Images or video content for this service charge type
Extensions	element		optional	Blank element for additional service charge type details
Name	element	Translations	optional	Name of this service charge type, in relevant translations
percent	attribute	decimal	optional	
type	attribute	integer	required	
idRef	attribute	string	required	Reference identifier for this type of service charge

#### 49.1.21 ServiceChargeDetail

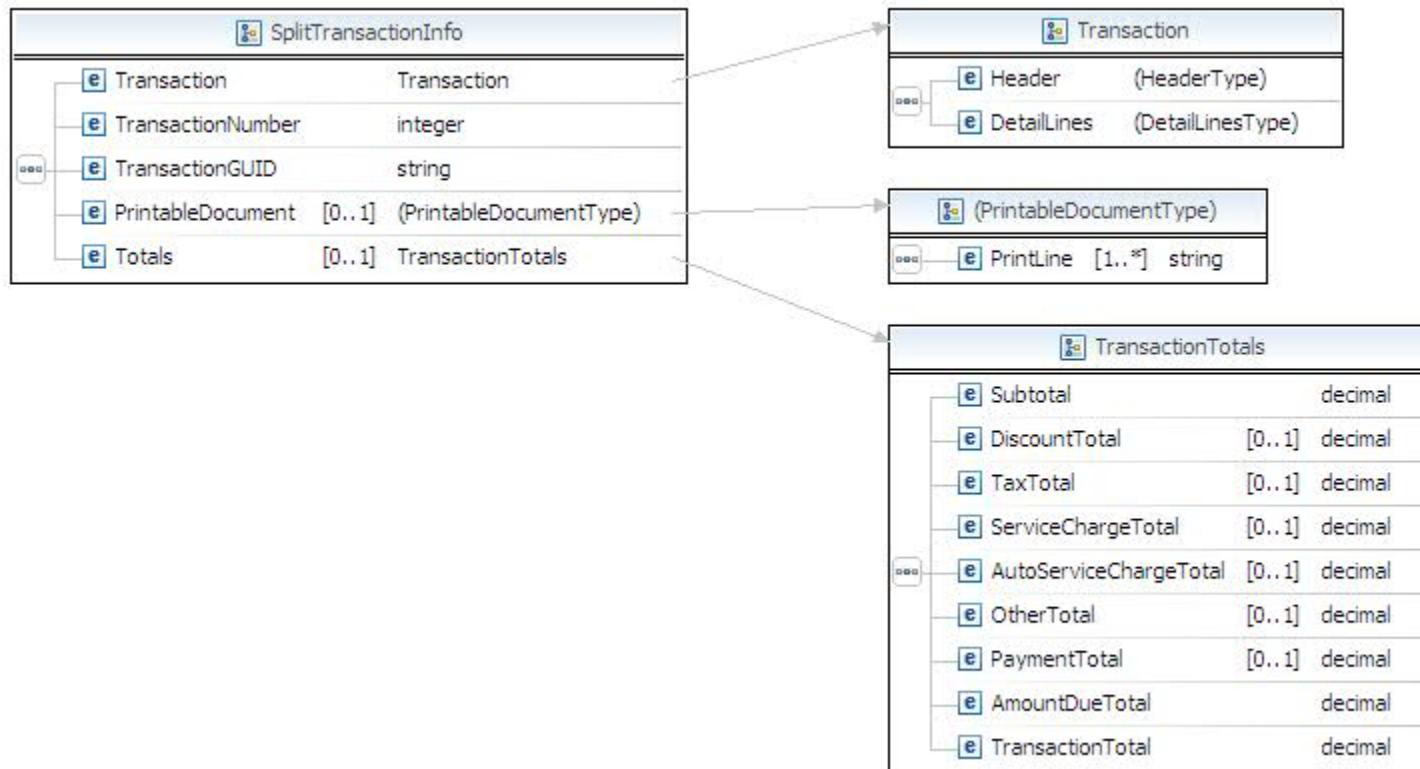

```
<xs:complexType name="ServiceChargeDetail">
  <xs:sequence>
    <xs:element name="LineItem" type="fbt:LineItemDetail" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
LineItem	element	LineItemDetail	required	Line item that describes this service charge

#### 49.1.22 ServiceRoundNumber

```
<xs:simpleType name="ServiceRoundNumber">
  <xs:restriction base="xs:integer">
    <xs:minInclusive value="1" />
  </xs:restriction>
</xs:simpleType>
```

#### 49.1.23 SplitTransactionInfo

```
<xs:complexType name="SplitTransactionInfo">
  <xs:sequence>
    <xs:element name="Transaction" type="fbt:Transaction" />
    <xs:element name="TransactionNumber" type="xs:integer" />
    <xs:element name="TransactionGUID" type="xs:string" />
    <xs:element name="PrintableDocument" minOccurs="0">
```

```

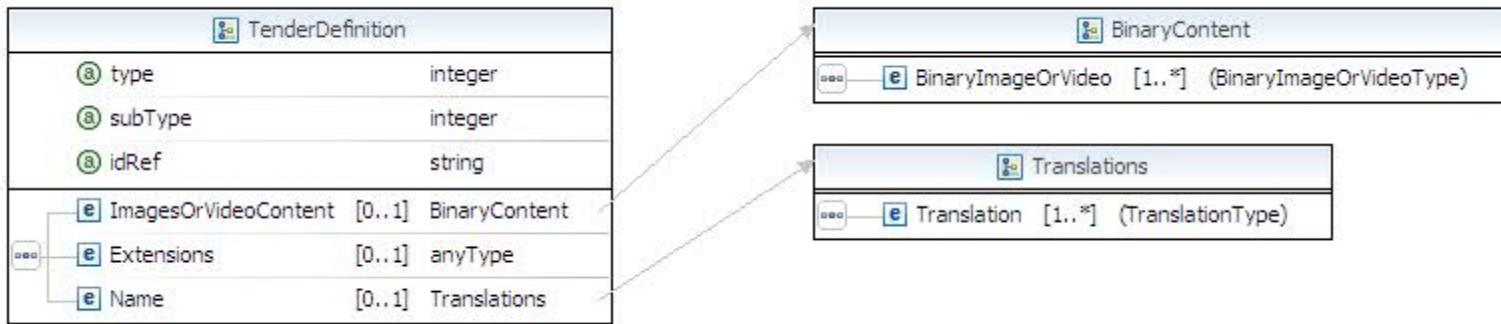

<xs:complexType>
    <xs:sequence>
        <xs:element name="PrintLine" type="xs:string" maxOccurs="unbounded" />
    </xs:sequence>
</xs:complexType>
</xs:element>
<xs:element name="Totals" type="fbt:TransactionTotals" minOccurs="0" />
</xs:sequence>
</xs:complexType>

```

Name	Type	Data Type	Use	Comments
Transaction	element	Transaction	required	Transaction that is described in described below
TransactionNumber	element	integer	required	Transaction number for this transaction
TransactionGUID	element	string	required	Globally unique id for this transaction
PrintableDocument	element	(PrintableDocument)*	optional	Printable documentation regarding this transaction if needed
PrintLine	element	string	required/multiple	Lines of text to print for documentation
Totals	element	TransactionTotals	optional	Totals for this transaction

\*anonymous type

#### 49.1.24 TenderDefinition

```

<xs:complexType name="TenderDefinition">
    <xs:sequence>
        <xs:element name="ImagesOrVideoContent" type="fbt:BinaryContent" minOccurs="0" />
        <xs:element name="Extensions" minOccurs="0" />
        <xs:element name="Name" type="fbt:Translations" minOccurs="0" />
    </xs:sequence>
    <xs:attribute name="type" type="xs:integer" use="required" />

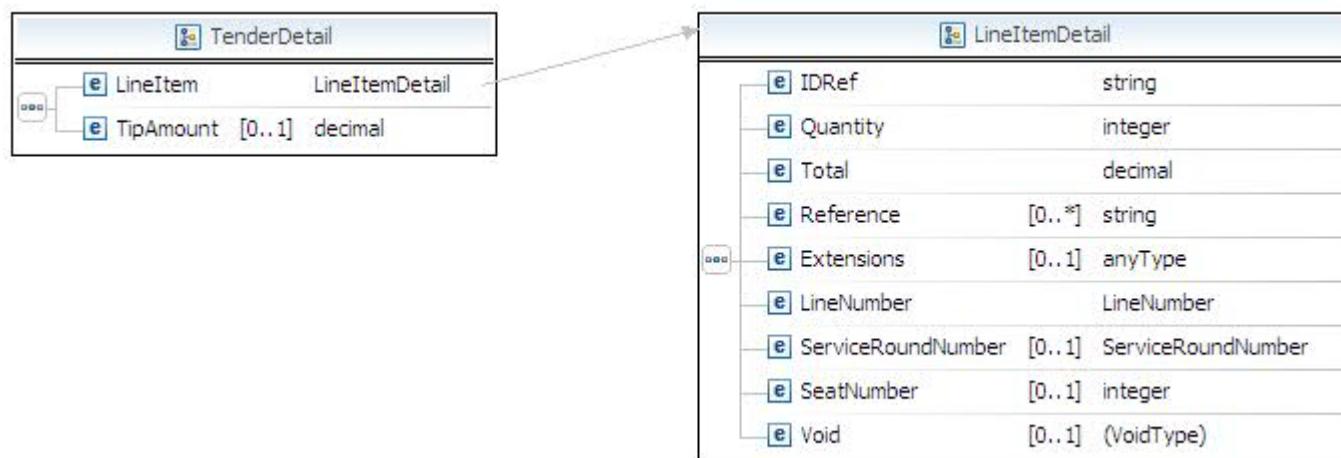

```

```
<xs:attribute name="subType" type="xs:integer" use="required" />
<xs:attribute name="idRef" type="xs:string" use="required" />
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
ImagesOrVideoContent	element	BinaryContent	optional	Images or video for this tender type
Extensions	element		optional	Blank element for additional tender type details
Name	element	Translations	optional	Name of this tender type
type	attribute	integer	required	
subtype	attribute	integer	required	
idRef	attribute	string	required	Reference identifier for this tender type

49.1.25

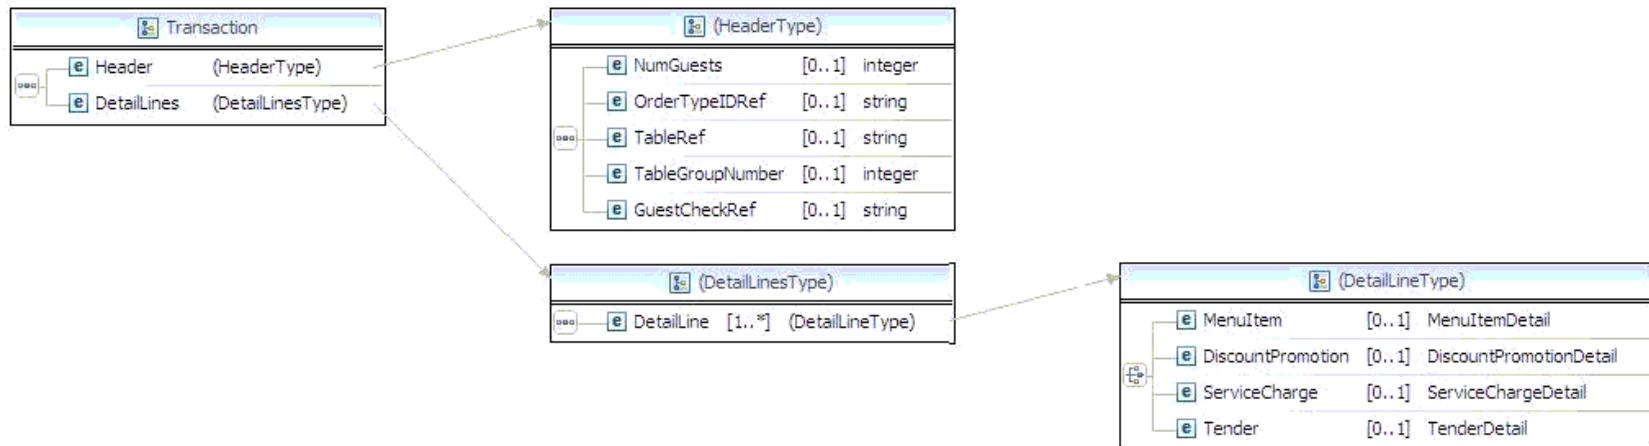

### TenderDetail

```
<xs:complexType name="TenderDetail">
  <xs:sequence>
    <xs:element name="LineItem" type="fbt:LineItemDetail" />
    <xs:element name="TipAmount" type="xs:decimal" minOccurs="0" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
LineItem	element	LineItemDetail	required	Line item that describes this tender
TipAmount	element	decimal	optional	Tip amount associated with this tender

#### 49.1.26 Transaction

```

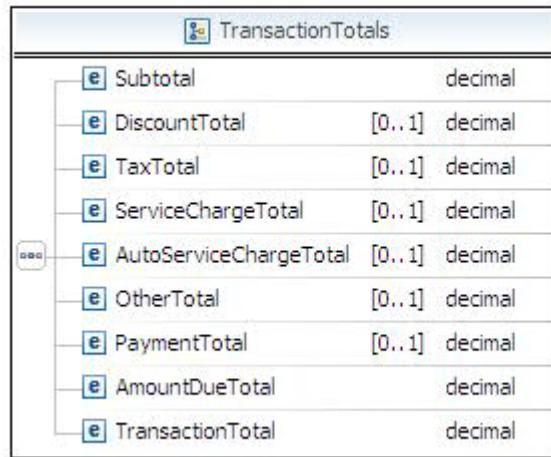

<xs:complexType name="Transaction">
  <xs:sequence>
    <xs:element name="Header">
      <xs:complexType>
        <xs:sequence>
          <xs:element name="NumGuests" type="xs:integer" minOccurs="0" />
          <xs:element name="OrderTypeIDRef" type="xs:string" minOccurs="0" />
          <xs:element name="TableRef" type="xs:string" minOccurs="0" />
          <xs:element name="TableGroupNumber" type="xs:integer" minOccurs="0" />
          <xs:element name="GuestCheckRef" type="xs:string" minOccurs="0" />
        </xs:sequence>
      </xs:complexType>
    </xs:element>
    <xs:element name="DetailLines">
      <xs:complexType>
        <xs:sequence>
          <xs:element name="DetailLine" maxOccurs="unbounded">
            <xs:complexType>
              <xs:choice>
                <xs:element name="MenuItem" type="fbt:MenuItemDetail" minOccurs="0" />
                <xs:element name="DiscountPromotion" type="fbt:DiscountPromotionDetail" minOccurs="0" />
                <xs:element name="ServiceCharge" type="fbt:ServiceChargeDetail" minOccurs="0" />
                <xs:element name="Tender" type="fbt:TenderDetail" minOccurs="0" />
              </xs:choice>
            </xs:complexType>
          </xs:element>
        </xs:sequence>
      </xs:complexType>
    </xs:element>
  </xs:sequence>
</xs:complexType>
  
```

</xs:complexType> </xs:element> </xs:sequence> </xs:complexType>				
Name	Type	Data Type	Use	Comments
Header	element	(Header)*	required	Meta data about this transaction
NumGuests	element	integer	optional	Number of guests that this transaction covers
OrderTypeIDRef	element	string	optional	Reference identifier for what type of order this transaction is
TableRef	element	string	optional	Reference to the table this transaction is for
TableGroupNumber	element	integer	optional	Group number for the table this transaction is for
GuestCheckRef	element	string	optional	??
DetailLines	element	(DetailLines)*	required	Detail lines of this transaction...as described below
DetailLine	element	(DetailLine)*	required/multiple	One detail for this transaction...as described below
MenuItem	element	MenuItemDetail	optional	Menu item in a detail line for this transaction
DiscountPromotion	element	DiscountPromotionDetail	optional	Discount promotion in a detail line for this transaction
ServiceCharge	element	ServiceChargeDetail	optional	Service charge in a detail line for this transaction
Tender	element	TenderDetail	optional	Tender in a detail line for this transaction

\*anonymous type

49.1.27

### TransactionTotals

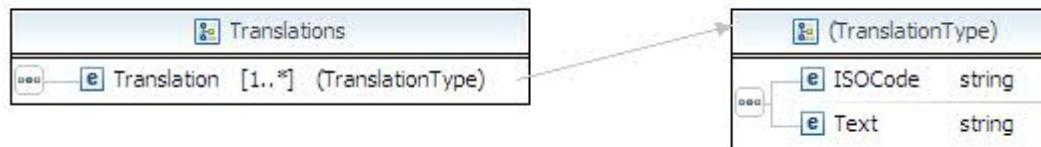

```
<xs:complexType name="TransactionTotals">
  <xs:sequence>
    <xs:element name="Subtotal" type="xs:decimal" />
    <xs:element name="DiscountTotal" type="xs:decimal" minOccurs="0" />
    <xs:element name="TaxTotal" type="xs:decimal" minOccurs="0" />
    <xs:element name="ServiceChargeTotal" type="xs:decimal" minOccurs="0" />
    <xs:element name="AutoServiceChargeTotal" type="xs:decimal" minOccurs="0" />
    <xs:element name="OtherTotal" type="xs:decimal" minOccurs="0" />
    <xs:element name="PaymentTotal" type="xs:decimal" minOccurs="0" />
    <xs:element name="AmountDueTotal" type="xs:decimal" />
    <xs:element name="TransactionTotal" type="xs:decimal" />
  </xs:sequence>
</xs:complexType>
```

Name	Type	Data Type	Use	Comments
Subtotal	element	decimal	required	Subtotal of all items on transaction
DiscountTotal	element	decimal	optional	Total discounts from discount promotions in transaction
TaxTotal	element	decimal	optional	Total tax for this transaction
ServiceChargeTotal	element	decimal	optional	Total service charges for this transaction
AutoServiceChargeTotal	element	decimal	optional	Total service charges automatically added for this transaction
OtherTotal	element	decimal	optional	Total of any other charges
PaymentTotal	element	decimal	optional	Total amount paid on this transaction

AmountDueTotal	element	decimal	required	Total amount due on this transaction
TransactionTotal	element	decimal	required	Total transaction amount

#### 49.1.28 Translations

```

<xs:complexType name="Translations">
  <xs:sequence>
    <xs:element name="Translation" maxOccurs="unbounded">
      <xs:complexType>
        <xs:sequence>
          <xs:element name="ISOCode" type="xs:string" />
          <xs:element name="Text" type="xs:string" />
        </xs:sequence>
      </xs:complexType>
    </xs:element>
  </xs:sequence>
</xs:complexType>
  
```

Name	Type	Data Type	Use	Comments
Translation	element	(TranslationsType)*	required/multiple	One translation, as defined below
ISOCode	element	string	required	ISO Code for translation
Text	element	string	required	Text in this translation

\*anonymous type

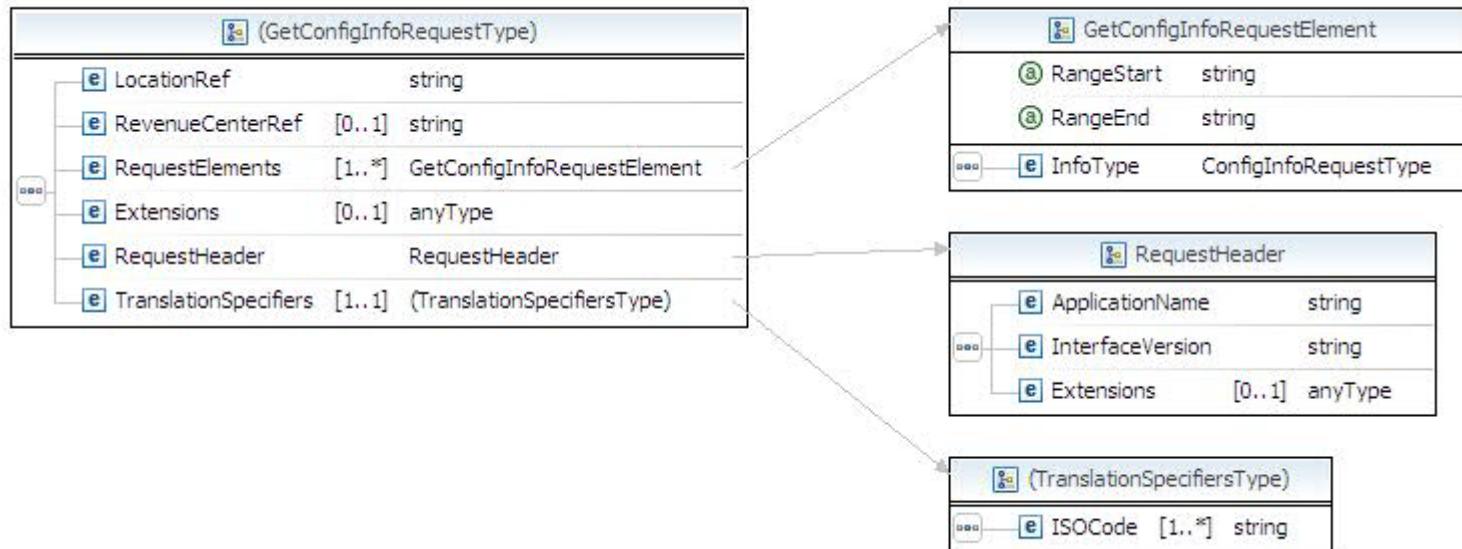

#### 49.2 Get Configuration Information

This message pair allows a requesting application to retrieve menu item, product, promotion, service charge, payments, and general parameter information. Typically it might be used to retrieve available menu items, name, images, and prices for a specific outlet.

Port	FoodBevOrderingSoapPort
Binding	FoodBevOrderingSoap, FoodBevOrderingSoap12
Operation	GetConfigurationInformation

<b>Soap Action</b>	http://htng.org/PWS/2008B/FoodBevOrdering#GetConfigurationInformation
<b>Input</b>	GetConfigurationInformationRequest
<b>Output</b>	GetConfigurationInformationResponse
<b>Primary Schema</b>	FoodBevOrdering.xsd

#### 49.2.1 GetConfigInfoRequest

```

<xs:element name="GetConfigInfoRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="LocationRef" type="xs:string" />

GeneralParameters	element	(GeneralParameters)*	optional	General Parameters for this configuration
Def	element	GeneralParameterDefinition	optional/multiple	One general parameter definition

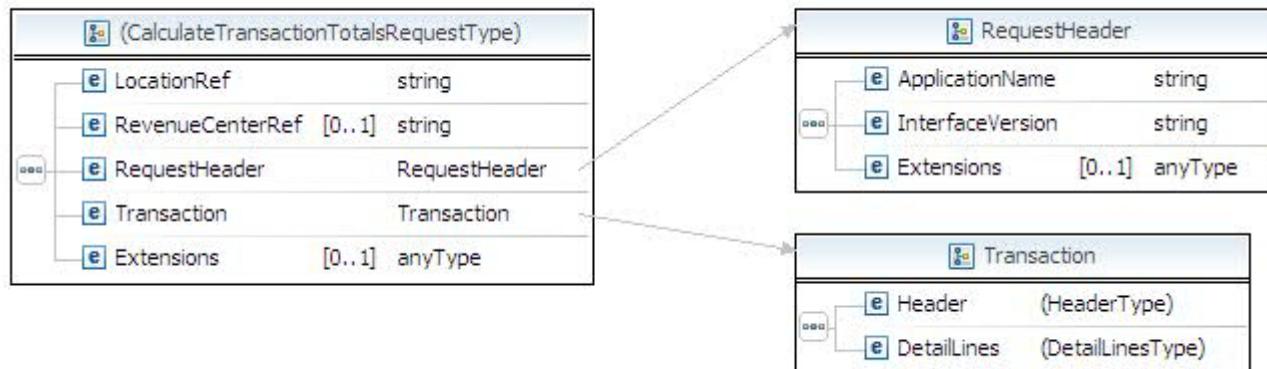

\*anonymous type

### 49.3 Calculate Totals

It is important that transaction totals (tax, discounts, amounts due) be calculated exactly and consistently, therefore having the service provider perform this (rather than each application) is important. This message pair provides this ability.

<b>Port</b>	FoodBevOrderingSoapPort
<b>Binding</b>	FoodBevOrderingSoap, FoodBevOrderingSoap12
<b>Operation</b>	CalculateTotals
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/FoodBevOrdering#CalculateTotals">http://htng.org/PWS/2008B/FoodBevOrdering#CalculateTotals</a>
<b>Input</b>	CalculateTransactionTotalsRequest
<b>Output</b>	CalculateTransactionTotalsResponse
<b>Primary Schema</b>	FoodBevOrdering.xsd

#### 49.3.1 CalculateTransactionTotalsRequest

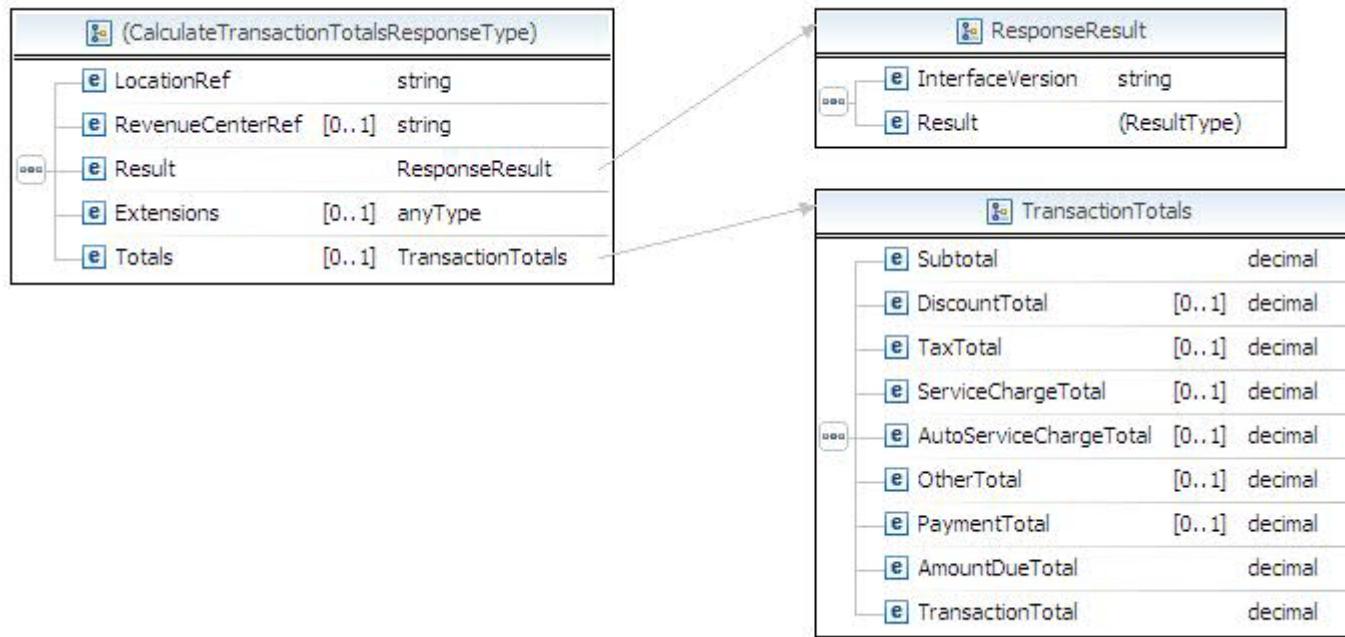

```

<xs:element name="CalculateTransactionTotalsRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="LocationRef" type="xs:string" />
      <xs:element name="RevenueCenterRef" type="xs:string" minOccurs="0" />
      <xs:element name="RequestHeader" type="fbt:RequestHeader" />
      <xs:element name="Transaction" type="fbt:Transaction" />
      <xs:element name="Extensions" minOccurs="0" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

Name	Type	Data Type	Use	Comments
LocationRef	element	string	required	Reference to the location where the request was initiated
RevenueCenterRef	element	string	optional	Reference to the revenue center related to this request
RequestHeader	element	RequestHeader	required	Generic response information from the request processing
Transaction	element	Transaction	required	Transaction for which to calculate totals
Extensions	element		optional	Blank element for additional transaction calculation details

#### 49.3.2 CalculateTransactionTotalsResponse

```

<xs:element name="CalculateTransactionTotalsResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="LocationRef" type="xs:string" />
      <xs:element name="RevenueCenterRef" type="xs:string" minOccurs="0" />
      <xs:element name="Result" type="fbt:ResponseResult" />
      <xs:element name="Extensions" minOccurs="0" />
      <xs:element name="Totals" type="fbt:TransactionTotals" minOccurs="0" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

Name	Type	Data Type	Use	Comments
LocationRef	element	string	required	Reference to the location where the request was initiated
RevenueCenterRef	element	string	optional	Reference to the revenue center related to this request
Result	element	ResponseResult	required	Generic response information from the request processing
Extensions	element		optional	Blank element for additional transaction calculation details

Totals	element	TransactionTotals	optional	Totals of the transaction for which calculations were requested
--------	---------	-------------------	----------	---

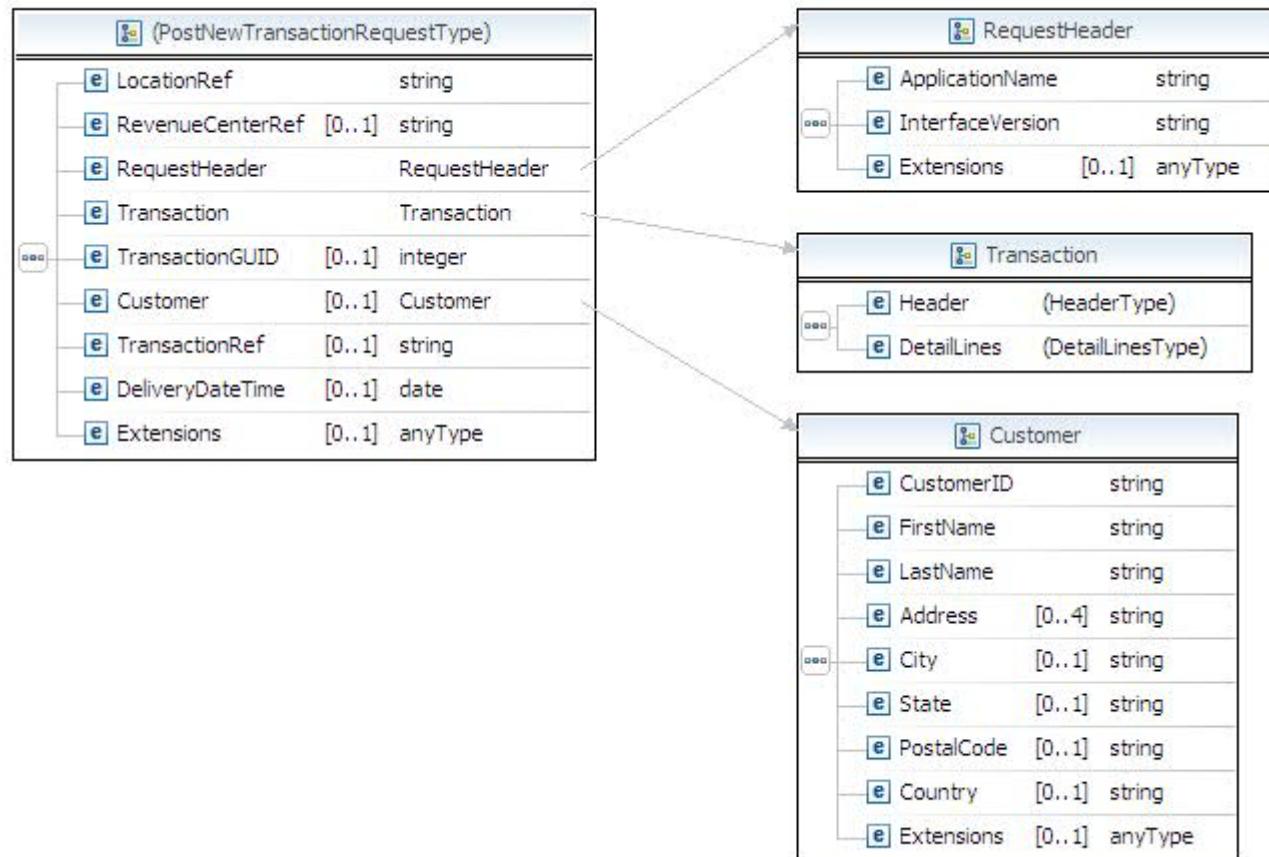

#### 49.4 Post New Transaction

This enables a requesting application to post a new transaction to the service provider. Typically it might be used by a STB application to place a guest's room service order. It also includes a requested delivery date and time.

<b>Port</b>	FoodBevOrderingSoapPort
<b>Binding</b>	FoodBevOrderingSoap, FoodBevOrderingSoap12
<b>Operation</b>	PostNewTransaction
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/FoodBevOrdering#PostNewTransaction">http://htng.org/PWS/2008B/FoodBevOrdering#PostNewTransaction</a>
<b>Input</b>	PostNewTransactionRequest
<b>Output</b>	PostNewTransactionResponse
<b>Primary Schema</b>	FoodBevOrdering.xsd

49.4.1

### PostNewTransactionRequest

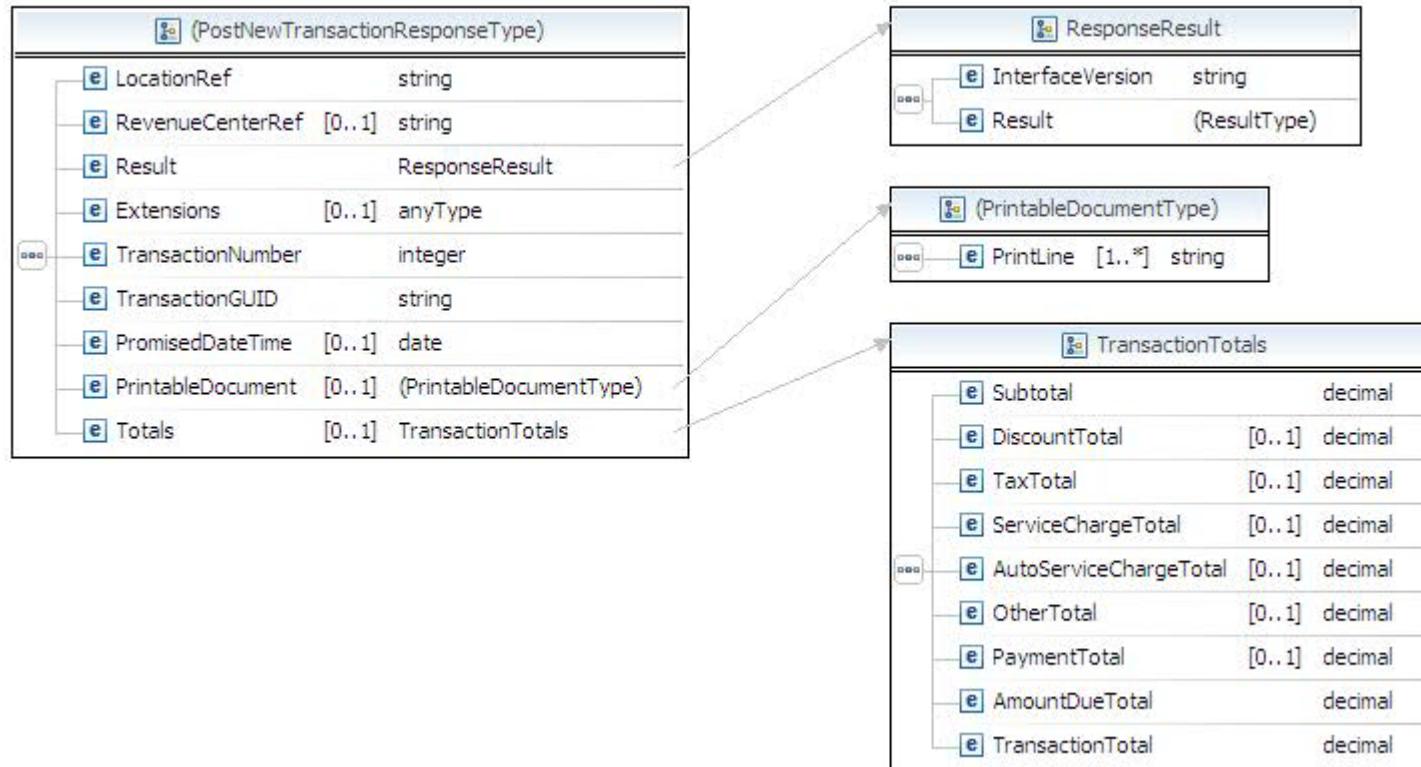

```

<xs:element name="PostNewTransactionRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="LocationRef" type="xs:string" />
      <xs:element name="RevenueCenterRef" type="xs:string" minOccurs="0" />
      <xs:element name="RequestHeader" type="fbt:RequestHeader" />
      <xs:element name="Transaction" type="fbt:Transaction" />
      <xs:element name="TransactionGUID" type="xs:integer" minOccurs="0" />
      <xs:element name="Customer" type="fbt:Customer" minOccurs="0" />
      <xs:element name="TransactionRef" type="xs:string" minOccurs="0" />
      <xs:element name="DeliveryDateTime" type="xs:date" minOccurs="0" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

<xs:element name="Extensions" minOccurs="0" /> </xs:sequence> </xs:complexType> </xs:element>				
Name	Type	Data Type	Use	Comments
LocationRef	element	string	required	Reference to the location where the request was initiated
RevenueCenterRef	element	string	optional	Reference to the revenue center related to this request
RequestHeader	element	RequestHeader	required	Generic response information from the request processing
Transaction	element	Transaction	required	Transaction being requested to post
TransactionGUID	element	integer	optional	Globally unique identifier for this new transaction
Customer	element	Customer	optional	Customer for which this transaction refers
TransactionRef	element	string	optional	
DeliveryDateTime	element	date	optional	Requested delivery date and time
Extensions	element		optional	Blank element for additional transaction posting details

49.4.2

### PostNewTransactionResponse

```
<xs:element name="PostNewTransactionResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="LocationRef" type="xs:string" />
      <xs:element name="RevenueCenterRef" type="xs:string" minOccurs="0" />
      <xs:element name="Result" type="fbt:ResponseResult" />
      <xs:element name="Extensions" minOccurs="0" />
      <xs:element name="TransactionNumber" type="xs:integer" />
      <xs:element name="TransactionGUID" type="xs:string" />
      <xs:element name="PromisedDateTime" type="xs:date" minOccurs="0" />
      <xs:element name="PrintableDocument" minOccurs="0">
        <xs:complexType>
          <xs:sequence>
            <xs:element name="PrintLine" type="xs:string" maxOccurs="unbounded" />
```

```

        </xs:sequence>
    </xs:complexType>
</xs:element>
<xs:element name="Totals" type="fbt:TransactionTotals" minOccurs="0" />
</xs:sequence>
</xs:complexType>
</xs:element>

```

Name	Type	Data Type	Use	Comments
LocationRef	element	string	required	Reference to the location where the request was initiated
RevenueCenterRef	element	string	optional	Reference to the revenue center related to this request
Result	element	ResponseResult	required	Generic response information from the request processing
Extensions	element		optional	Blank element for additional post transaction details
TransactionNumber	element	integer	required	Number assigned to this transaction
TransactionGUID	element	string	required	Globally unique identifier for this transaction
PromisedDateTime	element	date	optional	Promised date and time for completion
PrintableDocument	element	(PrintableDocument)*	optional	Printable documentation, if needed
PrintLine	element	string	required/multiple	One line of printable text for documentation
Totals	element	TransactionTotals	optional	Totals for this transaction

\*anonymous type

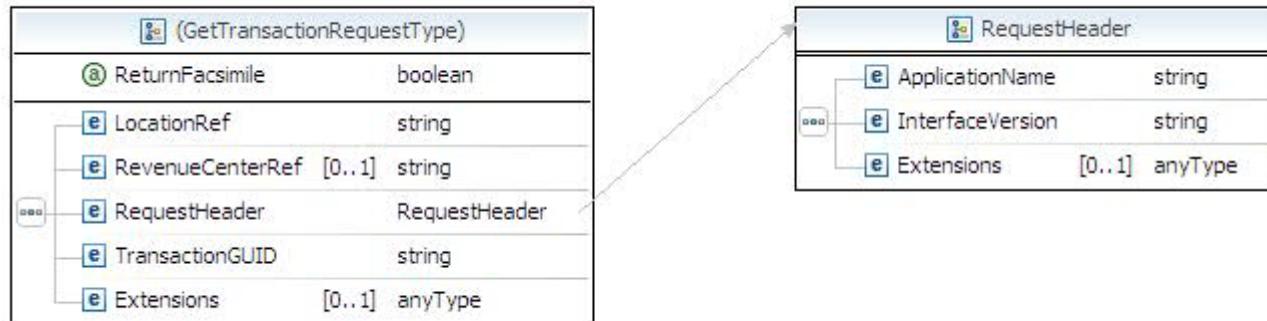

#### 49.5 Get Transaction

This allows the requesting application to retrieve a transaction, either to just display it or to append additional lines to it.

<b>Port</b>	FoodBevOrderingSoapPort
<b>Binding</b>	FoodBevOrderingSoap, FoodBevOrderingSoap12
<b>Operation</b>	GetTransaction
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/FoodBevOrdering#GetTransaction">http://htng.org/PWS/2008B/FoodBevOrdering#GetTransaction</a>
<b>Input</b>	GetTransactionRequest
<b>Output</b>	GetTransactionResponse
<b>Primary Schema</b>	FoodBevOrdering.xsd

49.5.1

### GetTransactionRequest

```

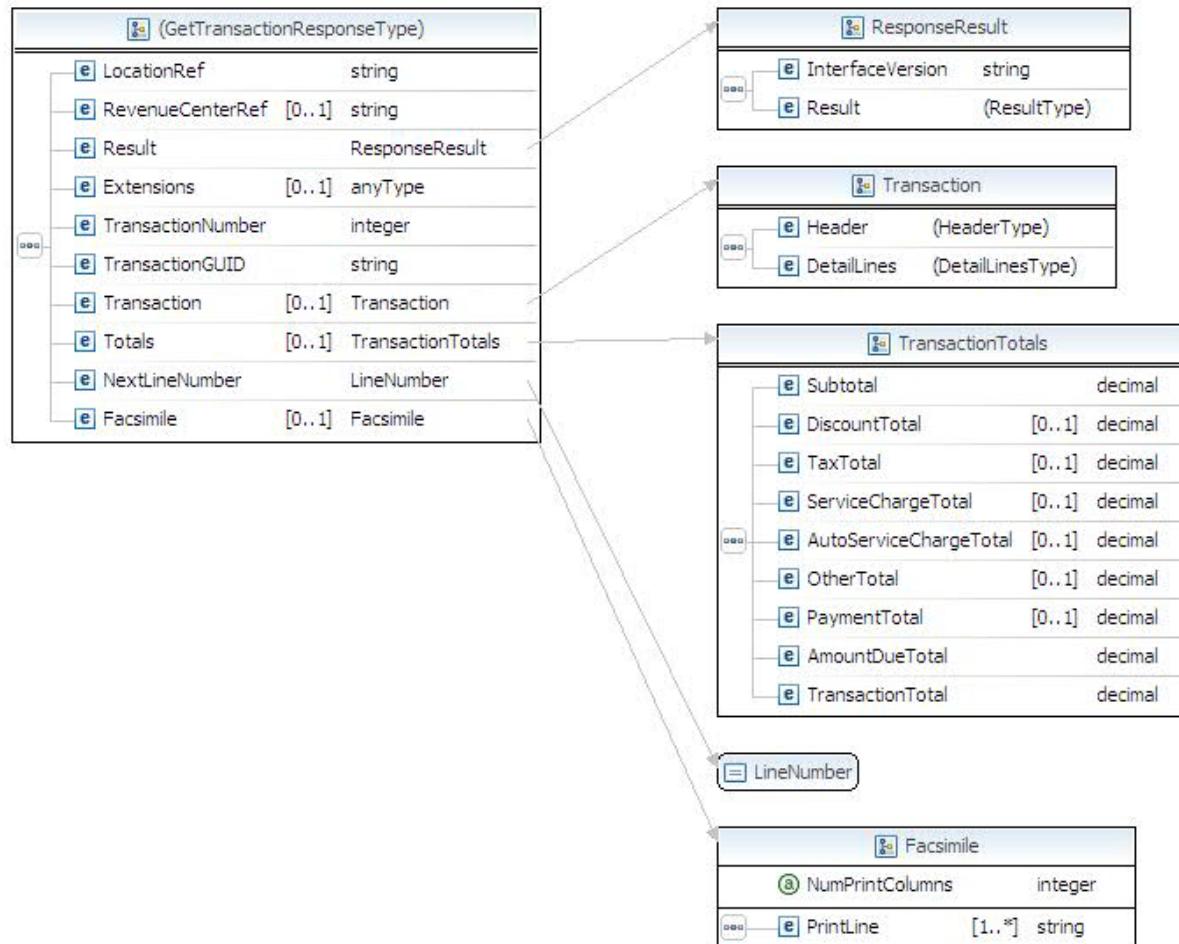

<xs:element name="GetTransactionRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="LocationRef" type="xs:string" />
      <xs:element name="RevenueCenterRef" type="xs:string" minOccurs="0" />
      <xs:element name="RequestHeader" type="fbt:RequestHeader" />
      <xs:element name="TransactionGUID" type="xs:string" />
      <xs:element name="Extensions" minOccurs="0" />
    </xs:sequence>
    <xs:attribute name="ReturnFacsimile" type="xs:boolean" use="required" />
  </xs:complexType>
</xs:element>

```

Name	Type	Data Type	Use	Comments
LocationRef	element	string	required	Reference to the location where the request was initiated
RevenueCenterRef	element	string	optional	Reference to the revenue center related to this request
RequestHeader	element	RequestHeader	required	Generic response information from the request processing
TransactionGUID	element	string	required	Globally unique identifier for the transaction being requested
Extensions	element		optional	Blank element for additional transaction request details

49.5.2

### GetTransactionResponse

```

<xs:element name="GetTransactionResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="LocationRef" type="xs:string" />
      <xs:element name="RevenueCenterRef" type="xs:string" minOccurs="0" />
      <xs:element name="Result" type="fbt:ResponseResult" />
      <xs:element name="Extensions" minOccurs="0" />
      <xs:element name="TransactionNumber" type="xs:integer" />
    
```

```

<xs:element name="TransactionGUID" type="xs:string" />
<xs:element name="Transaction" type="fbt:Transaction" minOccurs="0" />
<xs:element name="Totals" type="fbt:TransactionTotals" minOccurs="0" />
<xs:element name="NextLineNumber" type="fbt:LineNumber" />
<xs:element name="Facsimile" type="fbt:Facsimile" minOccurs="0" />
</xs:sequence>
</xs:complexType>
</xs:element>
```

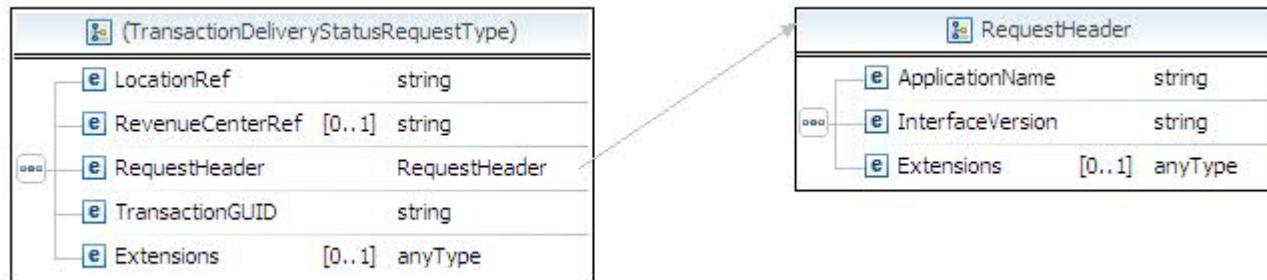

Name	Type	Data Type	Use	Comments
LocationRef	element	string	required	Reference to the location where the request was initiated
RevenueCenterRef	element	string	optional	Reference to the revenue center related to this request
Result	element	ResponseResult	required	Generic response information from the request processing
TransactionNumber	element	integer	required	Number assigned to this transaction
TransactionGUID	element	string	required	Globally unique identifier of this transaction
Transaction	element	Transaction	optional	Transaction matching GUID requested
Totals	element	TransactionTotals	optional	Transaction totals for this transaction
NextLineNumber	element	LineNumber	required	
Facsimile	element	Facsimile	optional	Printing information about this transaction

## 49.6 Get Transaction Delivery Status

This allows the requesting application to get the delivery status (in process, on the way) and the expected delivery date and time for the specified transaction.

<b>Port</b>	FoodBevOrderingSoapPort
<b>Binding</b>	FoodBevOrderingSoap, FoodBevOrderingSoap12
<b>Operation</b>	GetTransactionDeliveryStatus
<b>Sap Action</b>	<a href="http://htng.org/PWS/2008B/FoodBevOrdering#GetTransactionDeliveryStatus">http://htng.org/PWS/2008B/FoodBevOrdering#GetTransactionDeliveryStatus</a>
<b>Input</b>	TransactionDeliveryStatusRequest
<b>Output</b>	TransactionDeliveryStatusResponse
<b>Primary Schema</b>	FoodBevOrdering.xsd

#### 49.6.1 TransactionDeliveryStatusRequest

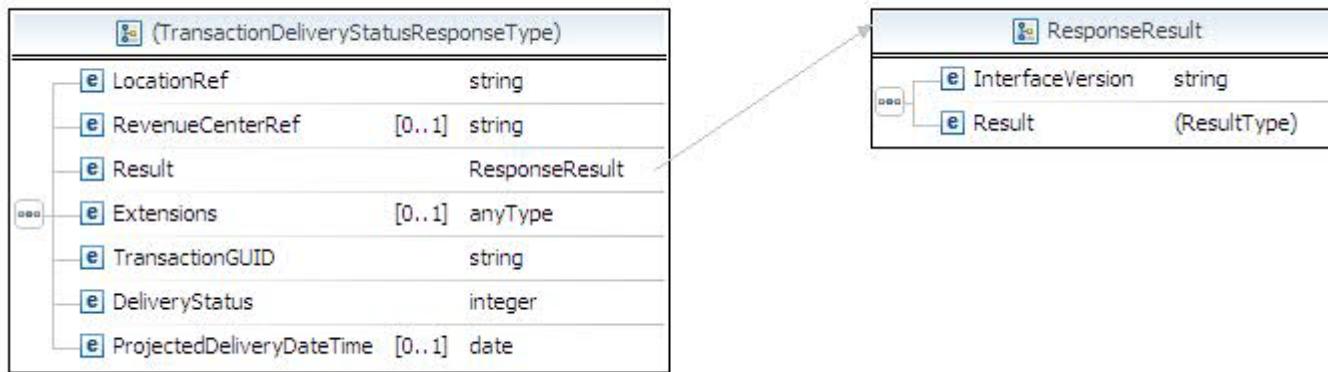

```

<xs:element name="TransactionDeliveryStatusRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="LocationRef" type="xs:string" />
      <xs:element name="RevenueCenterRef" type="xs:string" minOccurs="0" />
      <xs:element name="RequestHeader" type="fbt:RequestHeader" />
      <xs:element name="TransactionGUID" type="xs:string" />
      <xs:element name="Extensions" minOccurs="0" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

Name	Type	Data Type	Use	Comments
LocationRef	element	string	required	Reference to the location where the request was initiated
RevenueCenterRef	element	string	optional	Reference to the revenue center related to this request
RequestHeader	element	RequestHeader	required	Generic response information from the request processing
TransactionGUID	element	string	required	Globally unique identifier of transaction for which delivery status is being requested
Extensions	element		optional	Blank element for additional transaction delivery status details

#### 49.6.2 TransactionDeliveryStatusResponse

```

<xs:element name="TransactionDeliveryStatusResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="LocationRef" type="xs:string" />
      <xs:element name="RevenueCenterRef" type="xs:string" minOccurs="0" />
      <xs:element name="Result" type="fbt:ResponseResult" />
      <xs:element name="Extensions" minOccurs="0" />
      <xs:element name="TransactionGUID" type="xs:string" />
      <xs:element name="DeliveryStatus" type="xs:integer" />
      <xs:element name="ProjectedDeliveryDateTime" type="xs:date" minOccurs="0" />
    </xs:sequence>
  </xs:complexType>
</xs:element>

```

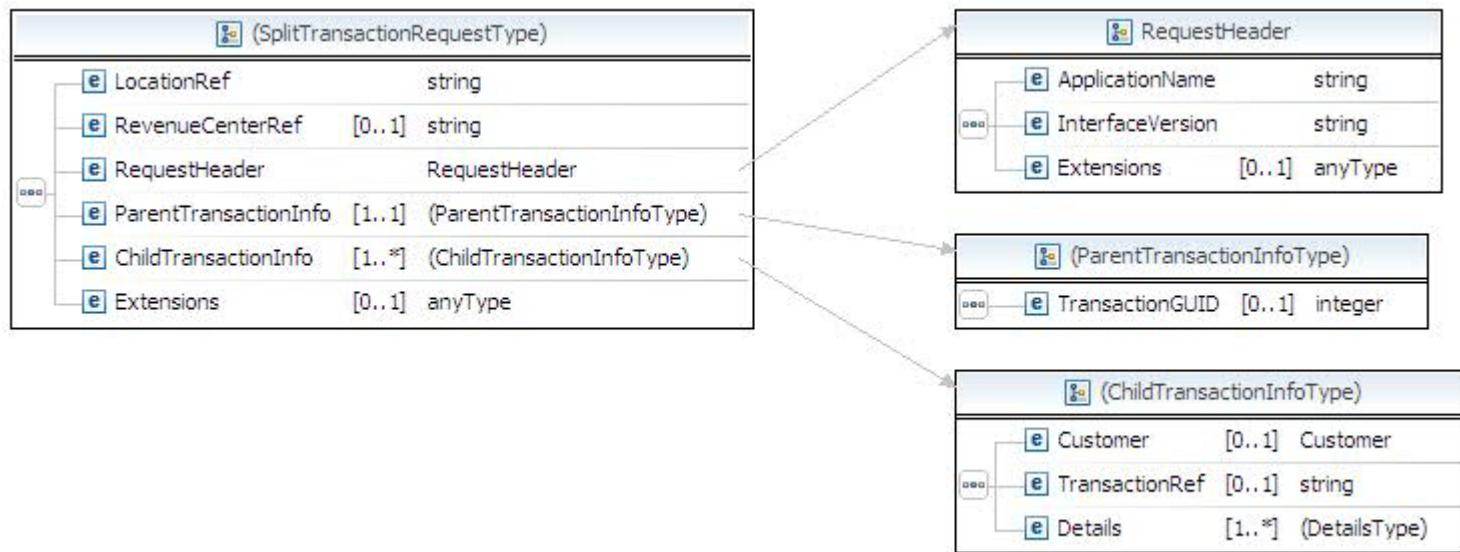

Name	Type	Data Type	Use	Comments
LocationRef	element	string	required	Reference to the location where the request was initiated
RevenueCenterRef	element	string	optional	Reference to the revenue center related to this request
Result	element	ResponseResult	required	Generic response information from the request processing
Extensions	element		optional	Blank element for additional transaction delivery status details
TransactionGUID	element	string	required	Globally unique identifier for which delivery status was requested
DeliveryStatus	element	integer	required	Status of the delivery related to the transaction identified
ProjectedDeliveryDateTime	element	date	optional	Projected delivery date and time

## 49.7 Split Transaction

This enables the requesting application/device request a transaction to be split into multiple transactions.

<b>Port</b>	FoodBevOrderingSoapPort
<b>Binding</b>	FoodBevOrderingSoap, FoodBevOrderingSoap12
<b>Operation</b>	SplitTransaction
<b>Soap Action</b>	<a href="http://htng.org/PWS/2008B/FoodBevOrdering#SplitTransaction">http://htng.org/PWS/2008B/FoodBevOrdering#SplitTransaction</a>
<b>Input</b>	SplitTransactionRequest
<b>Output</b>	SplitTransactionResponse
<b>Primary Schema</b>	FoodBevOrdering.xsd

### 49.7.1 SplitTransactionRequest

```

<xs:element name="SplitTransactionRequest">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="LocationRef" type="xs:string" />
      <xs:element name="RevenueCenterRef" type="xs:string" minOccurs="0" />
      <xs:element name="RequestHeader" type="fbt:RequestHeader" />
    
```

```

<xs:element name="ParentTransactionInfo" minOccurs="1">
    <xs:complexType>
        <xs:sequence>
            <xs:element name="TransactionGUID" type="xs:integer" minOccurs="0" />
        </xs:sequence>
    </xs:complexType>
</xs:element>
<xs:element name="ChildTransactionInfo" minOccurs="1" maxOccurs="unbounded">
    <xs:complexType>
        <xs:sequence>
            <xs:element name="Customer" type="fbt:Customer" minOccurs="0" />
            <xs:element name="TransactionRef" type="xs:string" minOccurs="0" />
            <xs:element name="Details" minOccurs="1" maxOccurs="unbounded">
                <xs:complexType>
                    <xs:sequence>
                        <xs:element name="ParentLineNumber" type="fbt:LineNumber" minOccurs="1" />
                        <xs:element name="ChildLineNumber" type="fbt:LineNumber" minOccurs="1" />
                        <xs:element name="SeatNumber" type="xs:integer" minOccurs="0" />
                    </xs:sequence>
                </xs:complexType>
            </xs:element>
        </xs:sequence>
    </xs:complexType>
</xs:element>
<xs:element name="Extensions" minOccurs="0" />
</xs:sequence>
</xs:complexType>
</xs:element>

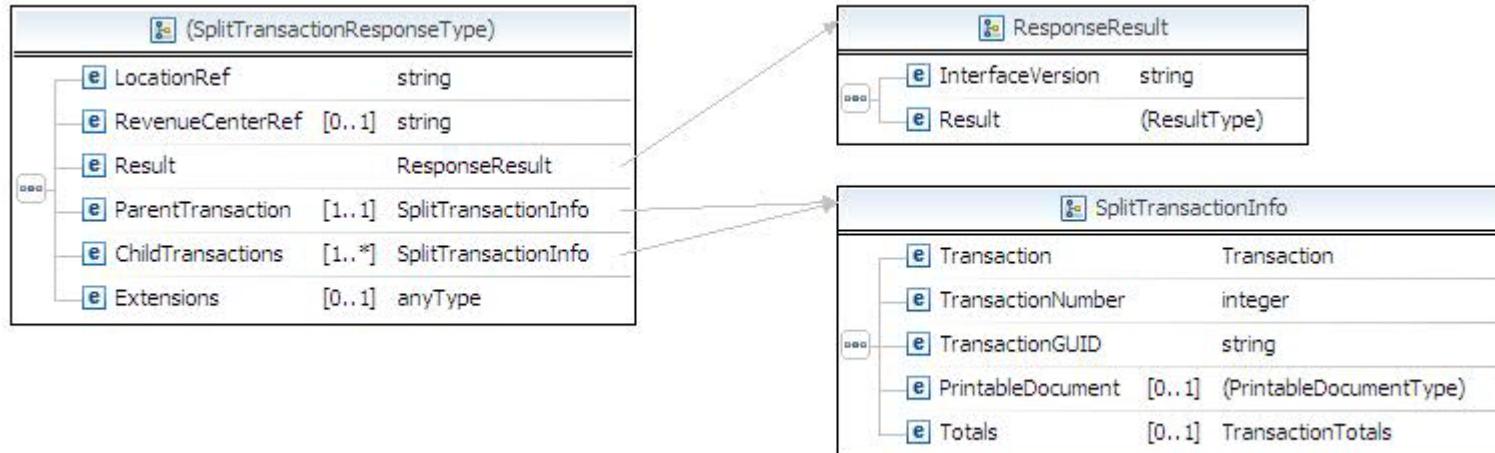

```

Name	Type	Data Type	Use	Comments
LocationRef	element	string	required	Reference to the location where the request was initiated
RevenueCenterRef	element	string	optional	Reference to the revenue center related to this request
RequestHeader	element	RequestHeader	required	Generic response information from the request processing
ParentTransactionInfo	element	(ParentTransactionInfo)*	required	Parent/original transaction information
TransactionGUID	element	integer	optional	Globally unique identifier for the parent/original transaction
ChildTransactionInfo	element	(ChildTransactionInfo)*	required/multiple	Child/new transaction information
Customer	element	Customer	optional	Customer assigned to this child/new transaction
TransactionRef	element	string	optional	
Details	element	(Details)*	required/multiple	Details for this child/new transaction
ParentLineNumber	element	LineNumber	required	Line number on the parent/original transaction to be included in this child transaction

ChildLineNumber	element	LineNumber	required	New line number on the child
SeatNumber	element	integer	optional	Seat number related to the line moving this child transaction
Extensions	element		optional	Blank element for additional split transaction details

\*anonymous type

#### 49.7.2 SplitTransactionResponse

```

<xs:element name="SplitTransactionResponse">
  <xs:complexType>
    <xs:sequence>
      <xs:element name="LocationRef" type="xs:string" />
      <xs:element name="RevenueCenterRef" type="xs:string" minOccurs="0" />
      <xs:element name="Result" type="fbt:ResponseResult" />
      <xs:element name="ParentTransaction" type="fbt:SplitTransactionInfo" minOccurs="1" maxOccurs="1" />
      <xs:element name="ChildTransactions" type="fbt:SplitTransactionInfo" minOccurs="1" maxOccurs="unbounded" />
      <xs:element name="Extensions" minOccurs="0" />
    </xs:sequence>
  </xs:complexType>
</xs:element>
  
```

Name	Type	Data Type	Use	Comments
LocationRef	element	string	required	Reference to the location where the request was initiated
RevenueCenterRef	element	string	optional	Reference to the revenue center related to this request

Result	element	ResponseResult	required	Generic response information from the request processing
ParentTransaction	element	SplitTransactionInfo	required	Parent/original transaction information
ChildTransactions	element	SplitTransactionInfo	required/multiple	Child/new transactions after splitting
Extensions	element		optional	Blank element for additional transaction splitting details

## Chapter 50 Business Process

### 50.1 Overview

This specification currently supports the following business processes:

- A device is creating a new transaction for a Food & Beverage order in a POS system.
- A device adds items to an open transaction in a POS system.
- A device splits a transaction into multiple transactions on the POS system.
- A device requests the status of a transaction in a POS system, including all item details, pricing, and tax information.
- A device receives configuration information from a POS system.
- A device requests the full menu data set for download or comparison with the devices menu data.

### 50.2 Roles

Conceptually there are two roles: a device (Kiosk, Touch Screen, In-Room TV, IP Phone, etc.) which serves as the user interface – typically in a self service mode – and a POS system, which manages the order operationally.

### 50.3 Behavior

The device generally initiates a request to the POS system. The POS system responds with the requested information or a success/failure status on the requested operation. The POS system does not actively communicate with the device – it only responds to requests.

### 50.4 Use-Cases

Throughout all of the following use-cases, the following actors are used: Device (Touch Screen/Kiosk) and POS System.

#### 50.4.1 Open Check – Order Food and Beverage Items from Device (Pay with Cash)

##### Actors

Device – Touch Screen/Kiosk  
POS – POS System

- A guest is sitting in the self-order service area at HTNG New York Hotel, working on his laptop and realizes he is hungry.
- He browses the restaurant menu on the tableside touch screen.
- He selects a Bacon Cheeseburger priced at \$12.95.

- A list of modifiers for the Bacon Cheeseburger is displayed.
- He is offered options to modify his item and selects American cheese, no onions, medium-well.
- He would like mayonnaise on the side as well, but the option is not displayed.
- He selects an option to "add instructions" and types in "side of mayo" and taps on the "submit" button.
- The screen is updated with the item and modifiers and options to update the quantity of burgers, add a beverage, add more food items, or to place the order.
- The guest decides to add a beverage also selects a Diet Coke for \$2.95 from the beverage menu.
- His current order is displayed on the screen. Guest is able to modify quantities of items from this screen.
  - The current step of the process is highlighted on a graphic at the top of the screen. Steps are "1 – Choose Items", "2- Review Order", "3 – Specify Payment Method", "4 – Place Order".
  - HTNG New York Hotel
  - Skyline Restaurant
  - Table #801
  - Bacon Cheeseburger – American cheese, no onions, medium-well.
    - Additional instructions: side of mayo.
    - \$12.95
    - Quantity: 1
  - Diet Coke
    - \$2.95
    - Quantity: 1
  - Subtotal
- Guest verifies that the order is correct and selects "continue to place order".
- The guest is asked how he would like to pay their bill with a note on the screen that more items can be added after placing the initial order and that final payment is not made until "request final bill" is selected.
- Guest is informed that promo codes or gift certificates are applied during final payment. Payment options are: Cash, all major credit cards or bill to hotel room.
- Guest selects "Pay with Cash and Place Order".
- The touch screen system transmits the order to the POS system.
- The POS system creates a new ticket for the respective table and then processes the ticket as defined by the configured business process. In this case, an order ticket is printed in the kitchen and the items are being prepared.
- The POS system returns a confirmation to the touch screen that the order has been accepted by the POS system. It also returns a ticket number.
- The touch screen displays a friendly message to the guest:
  - Thank You! Your order has been confirmed and is being prepared.
  - Order #4628 placed at 1:35pm
  - Check # 789 is displayed.
  - Instructions on how to order more items and to make final payment are displayed.
- After 8 seconds, the screen redirects to the home page.

- Associate will drop the check on the table once the food is delivered to the table. If the guest adds items to the order, the associate will drop an updated check each time new food items are delivered to the table.

XML Messages Specification:

Post New Transaction Request:

#### 50.4.2 Update Menu data from POS to Device

##### Actors

Device – Touch Screen/Kiosk  
POS – POS System

- The Device system requests menu data from the POS system to update its database. The menu items for this update request are the same as used in use-case 1.

#### 50.4.3 Review Open Check

##### Actors

Device – Touch Screen/Kiosk  
POS – POS System

- The guest at table #801 has already placed his order and would like to review what he has already ordered.
- The home page displays "Your bill has not yet been paid" and the home page navigation displays options to:
  - Order Beverages
  - Order Food Items
  - Another Round
  - Call Server
  - View/Pay Bill
- Guest taps on "View/Pay Bill" and the screen displays:
  - HTNG New York Hotel
  - Skyline Restaurant
  - Check # 789
  - Order #4628 placed at 1:35pm
  - Bacon Cheeseburger \$12.95
  - Diet Coke \$2.95
  - Tax (8.25%) \$1.31

- Current Total: \$17.21
- Your bill has not yet been paid.
- Buttons appear for:
  - Order Another Round
  - Order More Drinks
  - Order More Food Items
  - Pay This Bill
  - Home
- Guest selects "Home" and screen returns to homepage.

#### 50.4.4 Adding Items to an Existing Open Check

##### Actors

Device – Touch Screen/Kiosk  
POS – POS System

- The guest at touch screen table #801 is joined by a colleague who would also like to order items from the touch screen menu.
- The home page displays “Your bill has not yet been paid” and the home page navigation displays options to:
  - Order Beverages
  - Order Food Items
  - Another Round
  - Call Server
  - View/Pay Bill

- The colleague browses through the menu and select a Chicken Caesar Salad and a Crab and Corn Chowder and a coffee.
- The original guest adds another Diet Coke.
- Each time an item is order, the current order is displayed on the screen for review with the option to "Place Order".
- Colleague taps on "Place Order".
- The POS system updates the existing check for the table and then processes the ticket as defined by the configured business process. In this case, an order ticket is printed in the kitchen and the items are being prepared.
- The POS system returns a confirmation to the touch screen that the order has been accepted by the POS system. It also returns the order number.
- The touch screen displays a friendly message to the guests:
  - Thank You! Your order has been confirmed and is being prepared.
  - Order #4689 placed at 1:55pm
  - Check # 789 is displayed.
  - Instructions on how to order more items and to make final payment are displayed.

#### 50.4.5 Customer Requests to Print Bill

##### Actors

Device – Touch Screen/Kiosk  
POS – POS System

- In Use-case 8 (above) there is a button "Print Bill" which is available at any time the total bill shows. This button can show before the bill is paid or after the bill is paid. The "Print Bill" button is only available in case the Device is equipped with a local printer.
- The customer presses the "Print Bill" button.
- The current bill is printed. If the bill is not yet paid, it will show as OPEN. If the bill is paid, the payment method with which it has been paid is displayed.
- If the bill has been split, a separate ticket for every payment method or credit card will be printed.

## 50.4.6 Customer Requests to Email Bill

### Actors

Device – Touch Screen/Kiosk  
POS – POS System

- In Use-case 8 (above) there is a button “Email Bill” which is available at any time the total bill shows. This button can show before the bill is paid or after the bill is paid.
- The customer presses the “Email Bill” button. A new input field prompting the customer to enter their email address as well as a touch screen keyboard is displayed. The customer enters their email address and presses submit.
- The Device emails the bill to the recipient. If the bill is not yet paid, it will show as OPEN. If the bill is paid, the payment method with which it has been paid is shown in the email.
- If the bill has been split, the above process of emailing the partial bill will appear for every recipient of their respective partial bill.

## 50.4.7 Split Payment of Check

### Actors

Device – Touch Screen/Kiosk  
POS – POS System

- The table of four at Device #15 hands four credit cards to the associate and requests to split the check four ways.
- The total check for table # 15 looks as follows:

Seat 1:  
1 x Bacon CheeseBurger  
American Cheese  
No onions  
Medium Well  
Custom: side of mayo  
1 x Diet Coke \$2.95

Seat 2:  
1 x Pizza Roll \$5.65  
1 x Coke \$2.95

Seat 3:  
1 x Chicken Fingers \$7.99  
1 x Sprite \$2.95

Seat 4:  
1 x Apple Pie \$3.49  
1 x Coffee \$0.99

- Associate splits credit cards for payment in the POS system.
- The POS syncs with the Device and table #15 now reflects the split credit card payment amounts.
- Table manually signs receipts.
- Associate collects signed receipts and closes out check on the POS.
- Device #15 is synced with POS.
