

Indoor Air Quality Checklist

Properties should ensure ventilation systems operate properly in accordance with manufacturer, CDC and ASHRAE guidelines to provide acceptable indoor air quality in line with occupancy levels.

SERVICE Execute any deferred maintenance tasks on air handling equipment, conduct a building systems inventory, re-commission as required.

FILTRATION Check all filters and, where required, change old filters. Inspect filter racks for airtightness and potential bypass, upgrade to MERV 13 or better filtration efficiency as able.

CONTROLS Enable economizer mode, schedule ventilation two hours before and after occupancy, disable demand control ventilation.

VENTILATION Inspect and repair all ventilation dampers and control devices, ensuring no obstructions and full range of motion, maximize ventilation rates as equipment allows.

MONITORING Enable basic fault detection and diagnostics for air handling equipment as able, conduct a one-time air quality audit for regularly occupied areas.

SUPPLEMENTAL AIR TREATMENT Install portable air cleaners with suitable clean air delivery rate in areas with higher occupant densities or where social distancing may be difficult.
