Vacmobile: Simple. Secure. Scalable.

We all know the benefits of in-person interactions.

- Economic recovery: corporations, hotels, cruise lines, airlines, restaurants, schools, universities, retail, churches, cultural attractions, sports and entertainment venues, etc.

- Families are able to visit their loved ones in nursing homes, assisted living, and hospitals.

- Boost engagement and morale: safely resume in-person activities and full capacity work environments for employees, visitors, and vendors.

So how do we do this?

- With Vacmobile's free app, available on the App Store and Google Play, employees and members can share shot records and test results with enterprises so they can safely return to work, school, sports, travel, and entertainment venues, etc.

- Dashboard reporting enables enterprises to monitor and preserve records of their regulatory compliance.

- Dynamically generated digital health credentials with mobile or web application allow management of immunization records and COVID-19 test results all from any device.

- Vacmobile's cloud based solution is Fedramp, HIPAA, and FERPA compliant.

- Vacmobile integrates directly with your existing HR and/or physical access systems.
